<b>Preface</b>	<b>v</b>
<b>1 Basic Theory</b>	<b>1</b>
1.1 Existence and uniqueness . . . . .	2
1.1.1 First order half-linear system and other forms of half-linear equations . . . . .	2
1.1.2 Half-linear trigonometric functions . . . . .	4
1.1.3 Half-linear Prüfer transformation . . . . .	7
1.1.4 Half-linear Riccati transformation . . . . .	8
1.1.5 Existence and uniqueness theorem . . . . .	8
1.1.6 An alternative approach to the existence theory . . . . .	9
1.2 Sturmian theory . . . . .	13
1.2.1 Picone's identity . . . . .	13
1.2.2 Energy functional . . . . .	14
1.2.3 Roundabout theorem . . . . .	14
1.2.4 Sturmian separation and comparison theorems . . . . .	16
1.2.5 More on the proof of the separation theorem . . . . .	18
1.2.6 Disconjugacy on various types of intervals . . . . .	20
1.2.7 Transformation of independent variable . . . . .	21
1.2.8 Reciprocity principle . . . . .	22
1.2.9 Sturmian theory for Mirzov's system . . . . .	22
1.2.10 Leighton-Wintner oscillation criterion . . . . .	25
1.3 Differences between linear and half-linear equations . . . . .	26
1.3.1 Wronskian identity . . . . .	27
1.3.2 Transformation formula . . . . .	30
1.3.3 Fredholm alternative . . . . .	31
1.4 Some elementary half-linear equations . . . . .	32
1.4.1 Equations with constant coefficients . . . . .	32

1.4.2	Euler type half-linear differential equation . . . . .	37
1.4.3	Kneser type oscillation and nonoscillation criteria . . . . .	43
1.5	Notes and references . . . . .	44
<b>2</b>	<b>Methods of Oscillation Theory</b>	<b>47</b>
2.1	Variational principle . . . . .	47
2.1.1	Formulation of variational principle . . . . .	48
2.1.2	Wirtinger inequality . . . . .	48
2.1.3	Applications . . . . .	49
2.2	Riccati technique . . . . .	50
2.2.1	Preliminaries . . . . .	50
2.2.2	More general Riccati transformation . . . . .	52
2.2.3	Riccati inequality . . . . .	52
2.2.4	Half-linear Hartman-Wintner theorem . . . . .	54
2.2.5	Positive solution of generalized Riccati equation . . . . .	59
2.2.6	Modified Riccati inequality . . . . .	63
2.2.7	Applications . . . . .	66
2.3	Comparison theorems . . . . .	69
2.3.1	Hille-Wintner comparison theorems . . . . .	69
2.3.2	Leighton comparison theorems . . . . .	73
2.3.3	Multiplied coefficient comparison . . . . .	75
2.3.4	Telescoping principle . . . . .	77
2.3.5	Comparison theorem with respect to $p$ . . . . .	80
2.4	Notes and references . . . . .	81
<b>3</b>	<b>Oscillation and Nonoscillation Criteria</b>	<b>83</b>
3.1	Criteria of classical type . . . . .	84
3.1.1	Hille-Nehari type criteria . . . . .	85
3.1.2	Other criteria . . . . .	87
3.2	Criteria by averaging technique . . . . .	91
3.2.1	Coles type criteria . . . . .	91
3.2.2	Generalized Kamenev criterion . . . . .	96
3.2.3	Generalized $H$ -function averaging technique – Philos type criterion . . . . .	97
3.3	Further extensions of Hille-Nehari type criteria . . . . .	99
3.3.1	$Q, H$ type criteria . . . . .	100
3.3.2	Hille-Nehari type weighted criteria and extensions . . . . .	113
3.4	Notes and references . . . . .	120
<b>4</b>	<b>Nonoscillatory Solutions</b>	<b>123</b>
4.1	Asymptotic of nonoscillatory solutions . . . . .	123
4.1.1	Integral conditions and classification of solutions . . . . .	124
4.1.2	The case $c$ negative . . . . .	126
4.1.3	Uniqueness in $\mathbb{M}^-$ . . . . .	132
4.1.4	The case $c$ positive . . . . .	134
4.1.5	Generalized Fubini's theorem and its applications . . . . .	137

4.2	Principal solution . . . . .	140
4.2.1	Principal solution of linear equations . . . . .	141
4.2.2	Mirzov's construction of principal solution . . . . .	142
4.2.3	Construction of Elbert and Kusano . . . . .	144
4.2.4	Comparison theorem for eventually minimal solutions of Riccati equations . . . . .	147
4.2.5	Sturmian property of the principal solution . . . . .	148
4.2.6	Principal solution of reciprocal equation . . . . .	149
4.2.7	Integrals associated with eventually minimal solution of Riccati equation . . . . .	150
4.2.8	Limit characterization of the principal solution . . . . .	154
4.2.9	Integral characterization of the principal solution . . . . .	158
4.2.10	Another integral characterization . . . . .	164
4.2.11	Oscillation criteria and (non)principal solution . . . . .	166
4.3	Half-linear differential equations and Karamata functions . . . . .	170
4.3.1	Existence of regularly varying solutions . . . . .	171
4.3.2	Existence of slowly varying solutions . . . . .	183
4.4	Notes and references . . . . .	187
<b>5</b>	<b>Various Oscillation Problems</b> . . . . .	<b>189</b>
5.1	Conjugacy and disconjugacy . . . . .	190
5.1.1	Lyapunov inequality . . . . .	190
5.1.2	Vallée-Poussin type inequality . . . . .	191
5.1.3	Focal point criteria . . . . .	193
5.1.4	Lyapunov-type focal points and conjugacy criteria . . . . .	196
5.1.5	Further related results . . . . .	200
5.2	Perturbation principle . . . . .	201
5.2.1	General idea . . . . .	201
5.2.2	Singular Leighton's theorem . . . . .	202
5.2.3	Leighton-Wintner type oscillation criterion . . . . .	205
5.2.4	Hille-Nehari type oscillation criterion . . . . .	207
5.2.5	Hille-Nehari type nonoscillation criterion . . . . .	210
5.2.6	Perturbed Euler equation . . . . .	212
5.2.7	Linearization method in half-linear oscillation theory . . . . .	215
5.3	Nonoscillation domains and (almost) periodicity . . . . .	217
5.3.1	Disconjugacy domain and nonoscillation domain . . . . .	217
5.3.2	Equations with periodic coefficients . . . . .	229
5.3.3	Equations with almost periodic coefficients . . . . .	230
5.4	Strongly and conditionally oscillatory equation . . . . .	237
5.4.1	Strong (non)oscillation criteria . . . . .	238
5.4.2	Oscillation constant . . . . .	240
5.5	Function sequence technique . . . . .	243
5.5.1	Function sequences and Riccati integral equation . . . . .	243
5.5.2	Modified approaches . . . . .	250
5.6	Distance between zeros of oscillatory solutions . . . . .	254
5.6.1	Asymptotic formula for distribution of zeros . . . . .	255

5.6.2	Quickly oscillating solution . . . . .	258
5.6.3	Slowly oscillating solution . . . . .	259
5.7	Half-linear Sturm-Liouville problem . . . . .	261
5.7.1	Basic Sturm-Liouville problem . . . . .	261
5.7.2	Regular problem with indefinite weight . . . . .	263
5.7.3	Singular Sturm-Liouville problem . . . . .	267
5.7.4	Singular eigenvalue problem associated with radial $p$ -Laplacian . . . . .	269
5.7.5	Rotation index and periodic potential . . . . .	270
5.8	Energy functional and various boundary conditions . . . . .	282
5.8.1	Disfocality . . . . .	284
5.8.2	Nonexistence of coupled points . . . . .	290
5.8.3	Comparison theorems of Leighton-Levin type . . . . .	293
5.9	Miscellaneous . . . . .	298
5.9.1	Extended Hartman-Wintner criterion . . . . .	298
5.9.2	Half-linear Milloux and Armellini-Tonelli-Sansone theorems . . . . .	301
5.9.3	Interval oscillation criteria . . . . .	305
5.10	Notes and references . . . . .	309
<b>6</b>	<b>BVP's for Half-Linear Differential Equations</b>	<b>311</b>
6.1	Eigenvalues, existence, and nonuniqueness problems . . . . .	312
6.1.1	Basic boundary value problem . . . . .	312
6.1.2	Variational characterization of eigenvalues . . . . .	312
6.1.3	Existence and (non)uniqueness below the first eigenvalue . . . . .	315
6.1.4	Homotopic deformation along $p$ and Leray-Schauder degree . . . . .	318
6.1.5	Multiplicity nonresonance results . . . . .	320
6.2	Fredholm alternative for one-dimensional $p$ -Laplacian . . . . .	325
6.2.1	Resonance at the first eigenvalue . . . . .	325
6.2.2	Resonance at higher eigenvalues . . . . .	335
6.3	Boundary value problems at resonance . . . . .	337
6.3.1	Ambrosetti-Prodi type result . . . . .	337
6.3.2	Landesman-Lazer solvability condition . . . . .	342
6.3.3	Fučík spectrum . . . . .	347
6.4	Notes and references . . . . .	350
<b>7</b>	<b>Partial Differential Equations with <math>p</math>-Laplacian</b>	<b>353</b>
7.1	Eigenvalues and comparison principle . . . . .	353
7.1.1	Dirichlet BVP with $p$ -Laplacian . . . . .	354
7.1.2	Second eigenvalue of $p$ -Laplacian . . . . .	357
7.1.3	Comparison and antimaximum principle for $p$ -Laplacian . . . . .	358
7.1.4	Fučík spectrum for $p$ -Laplacian . . . . .	361
7.2	Boundary value problems at resonance . . . . .	364
7.2.1	Resonance at the first eigenvalue in higher dimension . . . . .	364
7.2.2	Resonance at the first eigenvalue – multiplicity results . . . . .	367

7.2.3	Landesman-Lazer result in higher dimension . . . . .	368
7.3	Oscillation theory of PDE's with $p$ -Laplacian . . . . .	371
7.3.1	Picone's identity for equations with $p$ -Laplacian . . . . .	372
7.3.2	Nonexistence of positive solutions in $\mathbb{R}^N$ . . . . .	373
7.3.3	Oscillation criteria . . . . .	378
7.3.4	Equations involving pseudolaplacian . . . . .	380
7.4	Notes and references . . . . .	381
<b>8</b>	<b>Half-Linear Difference Equations</b> . . . . .	<b>383</b>
8.1	Basic information . . . . .	383
8.1.1	Linear difference equations . . . . .	383
8.1.2	Discretization, difficulties versus eases . . . . .	384
8.2	Half-linear discrete oscillation theory . . . . .	386
8.2.1	Discrete roundabout theorem and Sturmian theory . . . . .	386
8.2.2	Methods of half-linear discrete oscillation theory . . . . .	390
8.2.3	Refinements of Riccati technique . . . . .	391
8.2.4	Discrete oscillation criteria . . . . .	397
8.2.5	Hille-Nehari discrete nonoscillation criteria . . . . .	401
8.2.6	Some discrete comparison theorems . . . . .	408
8.3	Half-linear dynamic equations on time scales . . . . .	412
8.3.1	Essentials on time scales, basic properties . . . . .	412
8.3.2	Oscillation theory of half-linear dynamic equations . . . . .	414
8.4	Notes and references . . . . .	416
<b>9</b>	<b>Related Differential Equations and Inequalities</b> . . . . .	<b>417</b>
9.1	Quasilinear differential equations . . . . .	417
9.1.1	Quasilinear equations with constant coefficients . . . . .	418
9.1.2	Existence, uniqueness and singular solutions . . . . .	421
9.1.3	Asymptotic of nonoscillatory solutions . . . . .	422
9.1.4	Sufficient and necessary conditions for oscillation . . . . .	424
9.1.5	Generalized Riccati transformation and applications . . . . .	426
9.1.6	(Half-)linearization technique . . . . .	428
9.1.7	Singular solutions of black hole and white hole type . . . . .	431
9.1.8	Curious doubly singular equations . . . . .	434
9.1.9	Coupled quasilinear systems . . . . .	435
9.2	Forced half-linear differential equations . . . . .	438
9.2.1	Two oscillatory criteria . . . . .	438
9.2.2	Forced super-half-linear oscillation . . . . .	440
9.3	Half-linear differential equations with deviating arguments . . . . .	444
9.3.1	Oscillation of equation with nonnegative second coefficient . . . . .	444
9.3.2	Oscillation of equation with nonpositive second coefficient . . . . .	453
9.3.3	Existence and asymptotic behavior of nonoscillatory solutions . . . . .	457
9.4	Higher order half-linear differential equations . . . . .	462
9.4.1	$p$ -biharmonic operator . . . . .	462
9.4.2	Higher order half-linear eigenvalue problem . . . . .	463

---

9.5	Inequalities related to half-linear differential equations . . . . .	466
9.5.1	Inequalities of Wirtinger and Hardy type . . . . .	466
9.5.2	Inequalities of Opial type . . . . .	468
9.6	Notes and references . . . . .	469
