CONTENTS

<i>Contributors</i>	<i>ix</i>
<i>Acknowledgments</i>	<i>xi</i>
<i>Introduction to the Series</i>	<i>xiii</i>
<i>Introduction for Volume 3 of the Handbook of Computational Economics</i>	<i>xv</i>
1. Learning About Learning in Dynamic Economic Models	1
David A. Kendrick, Hans M. Amman, and Marco P. Tucci	
1. Introduction	2
2. The Framework	3
3. What We Have Learned	6
4. What We Hope to Learn	11
5. Algorithms and Codes	14
6. A Showcase on Active Learning	16
7. Learning with Forward Looking Variables	21
8. Other Applications of Active Learning	30
9. Summary	31
References	32
2. On the Numerical Solution of Equilibria in Auction Models with Asymmetries within the Private-Values Paradigm	37
Timothy P. Hubbard and Harry J. Paarsch	
1. Motivation and Introduction	38
2. Theoretical Model	40
3. Primer on Relevant Numerical Strategies	66
4. Previous Research Concerning Numerical Solutions	80
5. Some Examples	95
6. Comparisons of Relative Performance and Potential Improvements	103
7. Summary and Conclusions	112
Acknowledgments	112
References	112
3. Analyzing Fiscal Policies in a Heterogeneous-Agent Overlapping-Generations Economy	117
Shinichi Nishiyama and Kent Smetters	
1. Introduction	118
2. Existing Literature	119

3. Stylized Model Economy	122
4. Computational Algorithm	132
5. Calibration to the US Economy	138
6. Policy Experiments	144
7. Concluding Remarks	156
References	159
4. On Formulating and Solving Portfolio Decision and Asset Pricing Problems	161
Yu Chen, Thomas F. Cosimano, and Alex A. Himonas	
1. Introduction	161
2. Discrete Time Portfolio Decision Making	164
3. Discrete Time Asset Pricing	171
4. Continuous Time Portfolio Decision Problem	195
5. Continuous Time Asset Pricing	205
6. Conclusion	218
Acknowledgments	219
References	219
5. Computational Methods for Derivatives with Early Exercise Features	225
Carl Chiarella, Boda Kang, Gunter Meyer, and Andrew Ziogas	
1. General Introduction	225
2. The Problem Statement—In the Case of Stochastic Volatility and Poisson Jump Dynamics	226
3. American Call Options Under Jump-Diffusion Processes	230
4. American Call Options under Jump-Diffusion and Stochastic Volatility Processes	253
5. Conclusion	273
References	274
6. Solving and Simulating Models with Heterogeneous Agents and Aggregate Uncertainty	277
Yann Algan, Olivier Allais, Wouter J. Den Haan, and Pontus Rendahl	
1. Introduction	278
2. Example Economy	279
3. Algorithms—Overview	282
4. Models with Nontrivial Market Clearing	297
5. Approximate Aggregation	298
6. Simulation with a Continuum of Agents	298
7. Accuracy	306
8. Comparison	313
9. Other Types of Heterogeneity	317
10. Concluding Comments	318

A. Explicit Aggregation and Perturbation Techniques	319
Acknowledgments	322
References	323
7. Numerical Methods for Large-Scale Dynamic Economic Models	325
Lilia Maliar and Serguei Maliar	
1. Introduction	327
2. Literature Review	332
3. The Chapter at a Glance	340
4. Nonproduct Approaches to Representing, Approximating, and Interpolating Functions	353
5. Approximation of Integrals	380
6. Derivative-Free Optimization Methods	390
7. Dynamic Programming Methods for High-Dimensional Problems	398
8. Precomputation Techniques	405
9. Local (Perturbation) Methods	412
10. Parallel Computation	422
11. Numerical Analysis of a High-Dimensional Model	431
12. Numerical Results for the Multicountry Model	453
13. Conclusion	469
Acknowledgments	469
References	470
8. Advances in Numerical Dynamic Programming and New Applications	479
Yongyang Cai and Kenneth L. Judd	
1. Introduction	480
2. Theoretical Challenges	481
3. Numerical Methods for Dynamic Programming	483
4. Tools from Numerical Analysis	488
5. Shape-Preserving Dynamic Programming	494
6. Parallelization	500
7. Dynamic Portfolio Optimization with Transaction Costs	507
8. Dynamic Stochastic Integration of Climate and Economy	510
9. Conclusions	514
Acknowledgments	515
References	515
9. Analysis of Numerical Errors	517
Adrian Peralta-Alva and Manuel S. Santos	
1. Introduction	518
2. Dynamic Stochastic Economies	520
3. Numerical Solution of Simple Markov Equilibria	525

4. Recursive Methods for Non-Optimal Economies	538
5. Numerical Experiments	547
6. Concluding Remarks	553
References	554
10. GPU Computing in Economics	557
Eric M. Aldrich	
1. Introduction	557
2. Basics of GPGPU Computing	560
3. A Simple GPGPU Example	565
4. Example: Value Function Iteration	580
5. Example: A General Equilibrium Asset Pricing Model with Heterogeneous Beliefs	586
6. The Road Ahead	593
7. Conclusion	596
References	597
11. Computing All Solutions to Polynomial Equations in Economics	599
Felix Kubler, Philipp Renner, and Karl Schmedders	
1. Introduction	600
2. Gröbner Bases and Polynomial Equations	602
3. Applying Gröbner Bases to Economic Models	622
4. All-Solution Homotopy Methods	631
5. Applying Homotopy Methods	645
6. Conclusion	651
Acknowledgments	651
References	651
<i>Index</i>	653
