
HANDBOOK OF CORROSION ENGINEERING

Pierre R. Roberge

Second Edition

New York Chicago San Francisco Lisbon London Madrid
Mexico City Milan New Delhi San Juan Seoul
Singapore Sydney Toronto

CONTENTS

Preface ix
Acknowledgments x

Chapter 1. Introduction 1

1.1 The Study of Corrosion / 1
1.2 Visualizing Corrosion Cells / 3
1.3 A Simple Corrosion Model / 6
1.4 So, What Is Corrosion? / 14
1.5 Strategic Impact and Cost of Corrosion Damage / 17
References / 20

Chapter 2. Environments 21

2.1 Atmospheric Corrosion / 23
2.2 Corrosion in Water / 46
2.3 Corrosion in Seawater / 88
2.4 Corrosion in Soils / 99
2.5 Reinforced Concrete / 125
2.6 Microbes and Biofouling / 147
References / 174

Chapter 3. High-Temperature Corrosion 181

3.1 Introduction / 181
3.2 Thermodynamic Principles / 183
3.3 Kinetic Principles / 192
3.4 Practical High-Temperature Corrosion Problems / 198
References / 220

Chapter 4. Modeling, Life Prediction, and Computer Applications 223

4.1 Models, Computers, and Corrosion / 224
4.2 Historical Notes / 224
4.3 Improvement in Computer and Communication Technologies / 227
4.4 The Bottom-Up Approach / 228
4.5 Top-Down Corrosion Models / 248
4.6 Internet, the Web, and Corrosion / 265
References / 274

Chapter 5. Corrosion Failures **279**

- 5.1 Introduction / 279
- 5.2 Mechanisms and Forms of Corrosion Failures / 280
- 5.3 Investigating Corrosion Failures / 345
- References / 350

Chapter 6. Corrosion Maintenance through Inspection and Monitoring **355**

- 6.1 The Cost of Poor Maintenance / 357
- 6.2 Corrosion Management Strategies / 357
- 6.3 Maintenance Strategies / 357
- 6.4 Life-Cycle Asset Management / 360
- 6.5 Inspection Strategies / 361
- 6.6 Industrial Examples / 387
- 6.7 What Is Corrosion Monitoring? / 420
- 6.8 Corrosion-Monitoring Techniques / 424
- 6.9 Corrosion-Monitoring Locations / 452
- 6.10 Corrosion-Monitoring Systems / 454
- 6.11 Integration in Process Control / 456
- 6.12 Modeling the Corrosion-Monitoring Response / 456
- 6.13 Probe Design and Selection / 459
- 6.14 Data Communication and Analysis Requirements / 468
- References / 469

Chapter 7. Corrosion Testing **473**

- 7.1 Introduction / 474
- 7.2 Laboratory-Controlled Tests / 475
- 7.3 Field Tests / 477
- 7.4 Test Objectives / 480
- 7.5 Procurement of Test Materials / 480
- 7.6 Specimen Preparation / 482
- 7.7 Controls / 487
- 7.8 Specimen Arrangement for Corrosion Tests / 489
- 7.9 Effects of Variables / 490
- 7.10 Conducting the Test / 492
- 7.11 Posttest Appraisals / 493
- 7.12 Electrochemical Test Methods / 498
- 7.13 Accelerated Test Environments / 527
- 7.14 Surface Characterization Techniques / 563
- References / 572

Chapter 8. Engineering Materials: Selection and Design Considerations **577**

- 8.1 Materials Selection / 579
- 8.2 Corrosion-Aware Materials Selection / 580
- 8.3 Selection Compromises / 587
- 8.4 Materials Selection Road Map / 592
- 8.5 Basics of Metallurgy / 597

- 8.6 Engineering Materials / 614
- 8.7 Design Considerations / 774
- References / 784

Chapter 9. Protective Coatings**787**

- 9.1 Types of Coatings / 788
- 9.2 Why Coatings Fail? / 788
- 9.3 Soluble Salts and Coating Failures / 792
- 9.4 Economic Aspects of Coatings Selection and Maintenance / 796
- 9.5 Organic Coatings / 799
- 9.6 Inorganic (Nonmetallic) Coatings / 819
- 9.7 Metallic Coatings / 827
- 9.8 Coating Inspection and Testing / 845
- 9.9 Surface Preparation / 860
- References / 866

Chapter 10. Corrosion Inhibitors**869**

- 10.1 Basic Concepts / 870
- 10.2 Types of Inhibitors / 879
- 10.3 Environmental Factors / 890
- 10.4 Green Inhibitors / 907
- 10.5 Application Techniques / 909
- 10.6 Safety Precautions / 913
- References / 914

Chapter 11. Cathodic Protection**917**

- 11.1 Cathodic Protection Historical Notes / 917
- 11.2 How CP Works in Water? / 919
- 11.3 How CP Works in Soils? / 926
- 11.4 How CP Works in Concrete? / 935
- 11.5 Cathodic Protection Components / 940
- 11.6 Soil Resistivity Measurements / 954
- 11.7 Potential to Environment / 960
- 11.8 Current Requirement Tests / 961
- 11.9 Stray Current Effects / 964
- 11.10 Monitoring Pipeline CP Systems / 965
- 11.11 Simulation and Optimization of CP Designs / 970
- References / 977

Chapter 12. Anodic Protection**979**

- 12.1 Basic Concepts / 979
- 12.2 Passivity of Metals / 980
- 12.3 Equipment Required for Anodic Protection / 985
- 12.4 Design Concerns / 987
- 12.5 Applications / 988
- 12.6 Practical Example: Anodic Protection in the Pulp and Paper Industry / 989
- References / 994

Appendix A. Periodic Table	995
Appendix B. SI Units Conversion Table	997
Appendix C. Reference Electrodes	1003
Appendix D. Chemical Compositions of Engineering Alloys	1011
Appendix E. Historical Perspective	1053
Index	1057
