Contents

Preface	xi
List of Symbols	xiii
1 Definitions, Notation, Terminology	1
1.1 Basic Notation and Terminology	1
1.2 Operations Relating Matrices	3
1.3 Inequality Relations Between Matrices	4
1.4 Operations Related to Individual Matrices	4
1.5 Some Special Matrices	9
1.6 Some Terms and Quantities Related to Matrices	11
2 Rules for Matrix Operations	15
2.1 Rules Related to Matrix Sums and Differences	15
2.2 Rules Related to Matrix Multiplication	16
2.3 Rules Related to Multiplication by a Scalar	18
2.4 Rules for the Kronecker Product	19
2.5 Rules for the Hadamard Product	20
2.6 Rules for Direct Sums	22
3 Matrix Valued Functions of a Matrix	23
3.1 The Transpose	23
3.2 The Conjugate	24
3.3 The Conjugate Transpose	25
3.4 The Adjoint of a Square Matrix	27
3.5 The Inverse of a Square Matrix	27
3.5.1 General Results	27
3.5.2 Inverses Involving Sums and Differences	28
3.5.3 Partitioned Inverses	29
3.5.4 Inverses Involving Commutation, Duplication and Elimination Matrices	31

3.6	Generalized Inverses	32
3.6.1	General Results	32
3.6.2	The Moore–Penrose Inverse	34
3.7	Matrix Powers	37
3.8	The Absolute Value	39
4	Trace, Determinant and Rank of a Matrix	41
4.1	The Trace	41
4.1.1	General Results	41
4.1.2	Inequalities Involving the Trace	43
4.1.3	Optimization of Functions Involving the Trace	45
4.2	The Determinant	47
4.2.1	General Results	47
4.2.2	Determinants of Partitioned Matrices	49
4.2.3	Determinants Involving Duplication Matrices	51
4.2.4	Determinants Involving Elimination Matrices	52
4.2.5	Determinants Involving Both Duplication and Elimination Matrices	53
4.2.6	Inequalities Related to Determinants	54
4.2.7	Optimization of Functions Involving a Determinant	56
4.3	The Rank of a Matrix	58
4.3.1	General Results	58
4.3.2	Matrix Decompositions Related to the Rank	60
4.3.3	Inequalities Related to the Rank	61
5	Eigenvalues and Singular Values	63
5.1	Definitions	63
5.2	Properties of Eigenvalues and Eigenvectors	64
5.2.1	General Results	64
5.2.2	Optimization Properties of Eigenvalues	67
5.2.3	Matrix Decompositions Involving Eigenvalues	69
5.3	Eigenvalue Inequalities	72
5.3.1	Inequalities for the Eigenvalues of a Single Matrix	72
5.3.2	Relations Between Eigenvalues of More Than One Matrix	74
5.4	Results for the Spectral Radius	76
5.5	Singular Values	78
5.5.1	General Results	78
5.5.2	Inequalities	80
6	Matrix Decompositions and Canonical Forms	83
6.1	Complex Matrix Decompositions	83
6.1.1	Jordan Type Decompositions	83
6.1.2	Diagonal Decompositions	85

6.1.3	Other Triangular Decompositions and Factorizations . . .	86
6.1.4	Miscellaneous Decompositions	88
6.2	Real Matrix Decompositions	89
6.2.1	Jordan Decompositions	89
6.2.2	Other Real Block Diagonal and Diagonal Decompositions	90
6.2.3	Other Triangular and Miscellaneous Reductions	92
7	Vectorization Operators	95
7.1	Definitions	95
7.2	Rules for the vec Operator	97
7.3	Rules for the vech Operator	99
8	Vector and Matrix Norms	101
8.1	General Definitions	101
8.2	Specific Norms and Inner Products	103
8.3	Results for General Norms and Inner Products	104
8.4	Results for Matrix Norms	106
8.4.1	General Matrix Norms	106
8.4.2	Induced Matrix Norms	108
8.5	Properties of Special Norms	109
8.5.1	General Results	109
8.5.2	Inequalities	111
9	Properties of Special Matrices	113
9.1	Circulant Matrices	113
9.2	Commutation Matrices	115
9.2.1	General Properties	116
9.2.2	Kronecker Products	117
9.2.3	Relations With Duplication and Elimination Matrices	118
9.3	Convergent Matrices	119
9.4	Diagonal Matrices	120
9.5	Duplication Matrices	122
9.5.1	General Properties	122
9.5.2	Relations With Commutation and Elimination Matrices	123
9.5.3	Expressions With vec and vech Operators	123
9.5.4	Duplication Matrices and Kronecker Products	124
9.5.5	Duplication Matrices, Elimination Matrices and Kronecker Products	126
9.6	Elimination Matrices	127
9.6.1	General Properties	127
9.6.2	Relations With Commutation and Duplication Matrices	127
9.6.3	Expressions With vec and vech Operators	128
9.6.4	Elimination Matrices and Kronecker Products	128

9.6.5	Elimination Matrices, Duplication Matrices and Kronecker Products	130
9.7	Hermitian Matrices	131
9.7.1	General Results	131
9.7.2	Eigenvalues of Hermitian Matrices	133
9.7.3	Eigenvalue Inequalities	134
9.7.4	Decompositions of Hermitian Matrices	137
9.8	Idempotent Matrices	138
9.9	Nonnegative, Positive and Stochastic Matrices	139
9.9.1	Definitions	139
9.9.2	General Results	140
9.9.3	Results Related to the Spectral Radius	141
9.10	Orthogonal Matrices	142
9.10.1	General Results	143
9.10.2	Decompositions of Orthogonal Matrices	144
9.11	Partitioned Matrices	144
9.11.1	General Results	145
9.11.2	Determinants of Partitioned Matrices	146
9.11.3	Partitioned Inverses	147
9.11.4	Partitioned Generalized Inverses	148
9.11.5	Partitioned Matrices Related to Duplication Matrices	149
9.12	Positive Definite, Negative Definite and Semidefinite Matrices	150
9.12.1	General Properties	151
9.12.2	Eigenvalue Results	153
9.12.3	Decomposition Theorems for Definite Matrices	154
9.13	Symmetric Matrices	156
9.13.1	General Properties	156
9.13.2	Symmetry and Duplication Matrices	157
9.13.3	Eigenvalues of Symmetric Matrices	158
9.13.4	Eigenvalue Inequalities	159
9.13.5	Decompositions of Symmetric and Skew-Symmetric Matrices	163
9.14	Triangular Matrices	164
9.14.1	Properties of General Triangular Matrices	164
9.14.2	Triangularity, Elimination and Duplication Matrices	165
9.14.3	Properties of Strictly Triangular Matrices	167
9.15	Unitary Matrices	167
10	Vector and Matrix Derivatives	171
10.1	Notation	171
10.2	Gradients and Hessian Matrices of Real Valued Functions with Vector Arguments	174
10.2.1	Gradients	174

10.2.2	Hessian Matrices	175
10.3	Derivatives of Real Valued Functions with Matrix Arguments .	176
10.3.1	General and Miscellaneous Rules	176
10.3.2	Derivatives of the Trace	177
10.3.3	Derivatives of Determinants	181
10.4	Jacobian Matrices of Linear Functions	183
10.4.1	Linear Functions with General Matrix Arguments . . .	183
10.4.2	Linear Functions with Symmetric Matrix Arguments . .	185
10.4.3	Linear Functions with Triangular Matrix Arguments . .	187
10.4.4	Linear Functions of Vector and Matrix Valued Functions with Vector Arguments	188
10.5	Product Rules	189
10.5.1	Matrix Products	189
10.5.2	Kronecker and Hadamard Products	192
10.5.3	Functions with Symmetric Matrix Arguments	193
10.5.4	Functions with Lower Triangular Matrix Arguments . .	195
10.5.5	Products of Matrix Valued Functions with Vector Arguments	196
10.6	Jacobian Matrices of Functions Involving Inverse Matrices . . .	198
10.6.1	Matrix Products	198
10.6.2	Kronecker and Hadamard Products	199
10.6.3	Matrix Valued Functions with Vector Arguments	200
10.7	Chain Rules and Miscellaneous Jacobian Matrices	202
10.8	Jacobian Determinants	204
10.8.1	Linear Transformations	204
10.8.2	Nonlinear Transformations	206
10.9	Matrix Valued Functions of a Scalar Variable	208
11	Polynomials, Power Series and Matrices	211
11.1	Definitions and Notations	211
11.1.1	Definitions and Notation Related to Polynomials	211
11.1.2	Matrices Related to Polynomials	213
11.1.3	Polynomials and Power Series Related to Matrices . . .	214
11.2	Results Relating Polynomials and Matrices	215
11.3	Polynomial Matrices	217
11.3.1	Definitions	217
11.3.2	Results for Polynomial Matrices	221
Appendix A	Dictionary of Matrices and Related Terms	225
References	287
Index	291
