*To my Grandma for her causeless love, my parents Rakesh Chandra Roy and Sneholota Roy whose spiritual inspiration remains vividly alive within all of us, my sisters GitaSree Roy, Anjali Roy, and Aparna Roy and their spouses and my brother Raghunath Roy and his wife Nupur for their inspiration, my daughter Elora and my son-in-law Nick, my sons Ajanta and Debasri, and finally my beloved wife Jharna for their love.*

# Preface

Throughout the course of my work in multihop mobile ad hoc networks (MANET) over the last several years, I reached the conclusion that mobility models and performance metrics need to be treated in detail in designing these networks that are the ultimate frontier in wireless communications. A wide variety of mobility models can be used by mobile nodes. Accurate representations of the characteristics of mobile nodes are key in understanding whether a given protocol used in the wireless communications network is useful in a particular type of ad hoc mobile scenario. The mobility performance metrics aim to capture the characteristics of different mobility patterns and can be used to analyze the performance of communications protocols. This book is an attempt to put together the theoretical aspects of the mobility models and metrics that are relevant to the mobile ad hoc network.

The mobility models are divided into seven different major groups based on their basic mobility characteristics: individual mobility, group mobility, autoregressive mobility, flocking mobility, virtual game-driven mobility, non-recurrent mobility, and time-variant community mobility. Many different variants of mobility models exist in each group and have been described in a chapter dedicated to each group.

The mobility performance metrics are grouped into seven major categories based on the parameters that are being considered in each group: direct mobility metrics, mobility measure metrics, link- and path-based metrics, network connectivity metrics, quality-of-service metrics, energy performance metrics, and mobility prediction metrics. All mobility performance parameters for each group have been described in each chapter.

The book has been organized into eight chapters: I. Introduction, II. Individual Mobility Models, III. Group Mobility Models, IV. Autoregressive Mobility Models, V. Flocking/Swarm Mobility Models, VI. Virtual Game-Driven Mobility Models, VII. Non-recurrent Mobility Models, and VIII. Social-Based Community Mobility Models. Readers familiar with mobile ad hoc networks will find interesting using the details of the mobility models and metrics in designing their wireless communications networks where mobile nodes move from place to place with no fixed infrastructures.

The book contains material from many remarkable published papers. I feel proud to mention the following authors as contributors whose material has been used in a substantial way in the respective sections of the book as follows:

- Section 3: T. Camp, J. Boleng, and V. Davies; M. McGuire; M. Piorkowski, N. Sarajanovac-Djukic, and M. Grossglauser; C.A.V. Campos, D.C. Otero, and L. F. M. de Moraes
- Section 4: C. Bettstetter, H. Hartenstein and X. Perez-Costa; J. L. Boudec and M. Vojnovic; E. Hyyti, P. Lassila, and J. Virtamo
- Section 5: C. Bettstetter; T. Spyropoulos, A. Jindal, and K. Psounis; H. Liu, Y. Xu, and Q-A. Zeng
- Section 6: A. Jardosh, E. M. Belding-Royer, K. C. Almeroth and S. Suri; P. Venkateswaran, R. Ghosh, A. Das, S. K. Sanyal, and R. Nandi; H. M. Zimmermann, I. Gruber and C. Roman; M. Fiore, J. H'arri, F. Filali, and C. Bonnet
- Section 7: B. Gloss, M. Scharf and D. Neubauer; E. Royer, P. M. Melliar-Smith, and L. Moser; Camp, J. Boleng, and V. Davies
- Section 8: T. Liu, P. Bahl, and I. Chlamtac; M. Zhao and W. Wang; K. Murray and D. Pesch; D. Turgut, S. K. Das, and M. Chatterjee
- Section 9: T. Liu, P. Bahl, and I. Chlamtac; K. I. Smith, R. M. Eversion, and J. E. Fieldsend; M. Jamieson; R. Rao and G. Kesidis
- Section 10: T. Camp, J. Boleng, and V. Davies; B. Liang and Z. Haas
- Section 11: M. Zhao and W. Wang
- Section 12: Z. Haas; S. Cho and J. P. Hayes; T. Camp, J. Boleng, and V. Davies
- Section 13: X. Li, B. Panja, and A. Zargari; H. Liu, Y. Xu, and Q-A. Zeng; W. Shen, H. Liu, and Q-A. Zeng
- Section 14: D. R. Basgeet, P. Dugenie, A. Munro, D. Kaleshi, and J. Irvine; S. C. Nelson, A. F. Harris III, and R. Kravets
- Section 15: X. Hong, T. Kwon, M. Gerla, D. Gu, and G. Pei; S. C. Nelson, A. F. Harris III, and R. Kravets
- Section 16: T. Cakar
- Section 17: D. Helbing, I. J. Farkas, P. Molnar, and T. Vicsek; J. Gobel and A. E. Krzesinski
- Section 18: M. U. Ilyas and H. Radha
- Section 19: F. Legendre, V. Borrel, M. D. de Amorim and S. Fdida
- Section 20: R. Timo, K. Blackmore, L. Hanlen; S. Lim, C. Yu, and C. R. Das; S. PalChaudhuri, J. L. Boudec and M. Vojnovic
- Section 21: S. Bittner, W.-U. Raffel, and M. Scholz; J. Tian, J. Haehner, C. Becker, I. Stepanov, and K. Rothermel
- Section 22: X. Hong, M. Gerla, G. Pei, and C. Chiang; S. H. Manjula, C. N. Abhilash, Shaila K., K. R. Venugopal, and L. M. Patnaik; T. Camp, J. Boleng, and V. Davies; S. S. Dalu, M. K. Naskar, and C. K. Sarkar
- Section 23: K. H. Wang and B. Li
- Section 24: W. Chen and P. Chen
- Section 25: K. Blakely and B. Lowekamp
- Section 26: B. Zhou, K. Xu, and M. Gerla
- Section 27: M. Rossi, L. Badia, N. Bui, and M. Zorzi
- Section 28: V. Borrel, M. D. Amorim, and S. Fdida
- Section 29: S. A. Williams and D. Huang
- Section 30: J. Cano and P. Manzoni

- Section 31: Z. R. Zaidi, B. L. Mark, and R.K. Thomas
- Section 32: Z. R. Zaidi, B. L. Mark, and R.K. Thomas
- Section 33: R. Olfati-Saber
- Section 34: D. S. Kim and S. K. Hwang
- Section 35: F. Fitzek, L. Badia, M. Zorzi, G. Schulte, P. Seeling, and T. Henderson; L. Petrak, O. Landsiedel, K. Wehrle
- Section 36: S. Redon, Y. J. Kim, M. C. Lin, D. Manocha and J. Templeman; M. C. Lin and D. Manocha; Y. Lu, H. Lin, Y. Gu and A. Helmy
- Section 37: W. Hsu, T. Spyropoulos, K. Psounis, A. Helmy; C. Boldrini, M. Conti, and A. Passarella
- Section 38: J. Ghosh, S. Yoon, H. Ngo, and C. Qiao
- Section 39: Y-X. Wang and F. S. Bao; H. Ochiai and H. Esaki; C. Gui; J. Leguay, T. Timur Friedman, and V. Conan
- Section 40: R. Sen, G. Hackmann, G. C. Roman, and C. Gill

Finally, I provide my heartfelt thanks to Susan Lagerstrom-Fife, Editor at Springer, for helping me with the publication of my book in numerous ways including presenting material for outlining the publication proposal. My assistant editor, Jennifer Maurer, helped me in preparing the book manuscript and advised me with infinite patience and good grace. I extend my thanks to Mr. Vignesh Kumar and his team for in-depth proofing of the book.

# List of Figures

2.1	Movement of a node in a MANET: <b>(a)</b> epoch mobility vectors and <b>(b)</b> resultant mobility vector [4]. © IEEE – Reproduced with permission . . . . .	26
2.2	Joint mobility transformation: <b>(a)</b> joint node case and <b>(b)</b> joint mobility transformation [4]. © IEEE – Reproduced with permission . . . . .	28
3.1	Traveling pattern of an MN using the 2D random walk mobility model ( <i>time</i> ) [3]. © IEEE – Reproduced with permission . . . . .	36
3.2	Traveling pattern of an MN using the 2D random walk mobility model ( <i>distance</i> ) [3]. © IEEE – Reproduced with permission . . . . .	37
3.3	Generalized mobility model simulation algorithm [12] . . . . .	52
3.4	Marginal <i>X</i> -coordinate steady-state probability for random walk ( $W = 135$ m) [12] . . . . .	53
3.5	Chi-squared distance for steady-state location approximation [12] . . . . .	54
3.6	Markov chain and probability matrix of Markovian random walk mobility model [3]. © IEEE – Reproduced with permission . . . . .	57
3.7	Mobile node’s movement pattern using Markovian random walk model [3]. © IEEE – Reproduced with permission . . . . .	59
3.8	Markov chain state transition for simple individual mobility Markovian model [22] . . . . .	59
4.1	Traveling pattern of a mobile node using the random waypoint mobility model [2]. © IEEE – Reproduced with permission . . . . .	66
4.2	Average neighbor in percentage versus time [2]. © IEEE – Reproduced with permission . . . . .	66
4.3	PDF of transition length of RWP nodes in a rectangle [1]. © Kluwer Academic Publishers – Reproduced with permission . . . . .	74

4.4	Expected length and PDF: <b>(a)</b> expected transition length of RWP nodes within an $a \times b$ rectangle and <b>(b)</b> PDF of transition length of RWP nodes on a disk of radius $a$ [1]. © Kluwer Academic Publishers – Reproduced with permission . . . . .	75
4.5	Spatial node distribution resulting from the RWP model (simulation results): <b>(a)</b> square system area and <b>(b)</b> circular system area [1]. © Kluwer Academic Publishers – Reproduced with permission . . . . .	80
4.6	Definition of direction angles [1]. © Kluwer Academic Publishers – Reproduced with permission . . . . .	83
4.7	Distribution of movement direction: $f_{\Theta}(\theta r)$ , $r/a$ , and $\theta$ [1]. © Kluwer Academic Publishers – Reproduced with permission . . . . .	85
4.8	Distribution of movement direction: $f_{\Theta}(\theta)$ and $\theta$ [1]. © Kluwer Academic Publishers – Reproduced with permission . . . . .	85
4.9	Cell changes per transition [1]. © Kluwer Academic Publishers – Reproduced with permission . . . . .	87
4.10	Expected cell boundary change rate $E\{C_t\}$ on a square area of size $\ A\  = 62,500\alpha^2$ m <sup>2</sup> , Number of cells = $\alpha^2$ , and length of one square cell = 250 m [1]. © Kluwer Academic Publishers – Reproduced with permission . . . . .	89
4.11	Random waypoint on a non-convex Swiss flag domain [14]. © IEEE – Reproduced with permission . . . . .	95
4.12	Random waypoint on a non-convex city section domain [14]. © IEEE – Reproduced with permission . . . . .	95
4.13	Restricted random waypoint on a plane with four squares [14]. © IEEE – Reproduced with permission . . . . .	96
4.14	Restricted random waypoint fish-in-a-bowl surface [14]. © IEEE – Reproduced with permission . . . . .	97
4.15	Random waypoint on a sphere [14]. © IEEE – Reproduced with permission . . . . .	98
4.16	Random waypoint (or random walk) with wrapping [14]. © IEEE – Reproduced with permission . . . . .	99
4.17	Random waypoint (or random walk) with billiard-like reflection at the edges of the domain [14]. © IEEE – Reproduced with permission . . . . .	100
4.18	Markov model of location transition of mobile nodes . . . . .	102
4.19	Zigzag movement of the RWP process [19]. © IEEE – Reproduced with permission . . . . .	104
4.20	Illustration of the variables: $P_1$ , $\phi$ , $r$ , $\Delta$ , $dA$ , and $a_1$ [19]. © IEEE – Reproduced with permission . . . . .	106
4.21	Illustration of the integral over $[0, 2\pi]$ [19]. © IEEE – Reproduced with permission . . . . .	106

4.22 Derivation of  $a_1$  and  $a_2$  in a unit disk [19].  
 © IEEE – Reproduced with permission . . . . . 107

4.23 The pdf of the node location,  $f(r)$ , (*left*) and the pdf of the distance of a node from the origin,  $f_R(r)$ , (*right*) for a unit disk. The *solid curves* correspond to our exact results and the *dashed curves* to approximation  $P1(r)$  (see Table 4.4) [19]. © IEEE – Reproduced with permission . . . . . 108

4.24 Notation for analysis of RWPB [19].  
 © IEEE – Reproduced with permission . . . . . 111

4.25 The pdf is resulting from the RWPB model in unit square. The *left* figure corresponds to pdf of the interior mode  $f_0(r)$ , and the *right* figure corresponds to pdf of the border mode  $f_i(r)$  [19]. © IEEE – Reproduced with permission . . . . . 114

4.26 Notation for analysis of RWPB in a unit circle [19].  
 © IEEE – Reproduced with permission . . . . . 115

4.27 The cdf  $F_R(r)$  of the distance of the node from the origin (*left*) and the pdf  $f(r) = f(|r|)$  of the node location (*middle* and *right*) for the RWPB model in a unit disk [19].  
 © IEEE – Reproduced with permission . . . . . 116

4.28 Comparison of  $C_n(d)$  with RWP node distribution (*dashed lines*), RWPB node distribution (*solid lines*), and uniform node distribution (*dotted lines*) for  $n = 20$ ,  $n = 100$ , and  $n = 500$  nodes (from *left* to *right*) [19].  
 © IEEE – Reproduced with permission . . . . . 117

4.29 On the *left* figure the *lower curve* corresponds to the pdf of the node location according to RWP model and the *upper curve* the pdf of the packet location in a dense ad hoc network. The figures on the *right* illustrate the respective pdfs in three-dimensions [19]. © IEEE – Reproduced with permission . . . . . 120

5.1 Speed behavior  $v(t)$  of car in downtown [6].  
 © ACM – Reproduced with permission . . . . . 129

5.2 Direction behavior of a node using smooth random behavior [6]. © ACM – Reproduced with permission . . . . . 131

5.3 Three mobility traces [6]. © ACM – Reproduced with permission . . . . . 132

5.4 Speed slowdown and node distribution: (a) modeling of slowdown of mobile nodes before turning and (b) spatial node distribution histogram [6]. © ACM – Reproduced with permission . . . . . 133

5.5 The first node enters the transmission range of the second node at an angle  $\phi$  to the tangent at A and moves along the chord AB [7]. © Inderscience – Reproduced with permission . . . . . 139

5.6 Comparison of theoretical and simulations results for the expected hitting and meeting times under the random

direction (or smooth random) mobility model [7].  
 © Inderscience – Reproduced with permission . . . . . 150

5.7 Random direction (or smooth random) mobility model:  
 (a) comparison of the theoretical and simulation results for  
 the expected contact time for parameters  $N = 100 \times 100$ ,  
 $\bar{T} = 300$ ,  $\bar{v} = 1$ . (b) meeting time distribution with  
 parameters  $N = 100 \times 100$ ,  $K = 30$ ,  $\bar{T} = 160$ ,  $\bar{v} = 1$ ,  
 $\bar{T}_{stop} = 150$ . (c) Inter-meeting time distribution with  
 parameters  $N = 100 \times 100$ ,  $K = 30$ ,  $\bar{T} = 160$ ,  $\bar{v} = 1$ ,  
 $\bar{T}_{stop} = 150$  [7]. © Inderscience – Reproduced with  
 permission . . . . . 152

5.8 Node A will pass through the transmission range of node B  
 if and only if its destination lies in the shaded region [7].  
 © Inderscience – Reproduced with permission . . . . . 155

5.9 Comparison of theoretical and simulation results for the  
 expected hitting and meeting times under the random  
 waypoint model [7]. © Inderscience – Reproduced with  
 permission . . . . . 158

5.10 Random waypoint mobility model: (a) comparison of  
 the theoretical and simulation results for the expected  
 contact time for parameters  $N = 100 \times 100$ ,  $\bar{v} = 1$ ,  
 $\bar{T}_{stop} = 150$ ; (b) meeting time distribution with parameters  
 $N = 100 \times 100$ ,  $K = 30$ ,  $\bar{v} = 1$ ,  $\bar{T}_{stop} = 150$ ; and  
 (c) inter-meeting time distribution with parameters  
 $N = 100 \times 100$ ,  $K = 30$ ,  $\bar{T} = 160$ ,  $\bar{v} = 1$ ,  $\bar{T}_{stop} = 150$  [7].  
 © Inderscience – Reproduced with permission . . . . . 158

5.11 Upper and lower bounds on the delay of  
 mobility-assisted routing scheme under random  
 direction [7]. © Inderscience – Reproduced with permission . . . . . 160

5.12 Simulation and analytical results for the expected delay of  
 (a) direct transmission and (b) epidemic routing. Network  
 parameters:  $N = 150 \times 150$ ,  $\bar{v} = 1$ ,  $\bar{L} = 55$ ,  $M = 50$ ,  
 $\bar{T} = 0$  [7]. © Inderscience – Reproduced with permission . . . . . 163

6.1 Freeway mobility model: (a) freeway mobility model,  
 (b) mobile node traveling pattern in freeway/city section,  
 and (c) pathway graph used in freeway . . . . . 170

6.2 Mobile nodes (e.g., vehicles) moving in two-lane freeway  
 [5]. © IEEE – Reproduced with permission . . . . . 171

6.3 Mobility rules in multi-lane freeways for mobile nodes . . . . . 172

6.4 Manhattan mobility model . . . . . 173

6.5 Car-following mobility model algorithm . . . . . 175

6.6 Evolution of speed and headway time for the first 20  
 vehicles belonging to a queue of cars meeting a slow  
 vehicle ahead (at time  $t = 60$  s, the slow vehicle starts  
 accelerating) [5]: (a) freeway model, (b) FTM model,

(c) IDM model, and (d) Kraub model. © IEEE –  
 Reproduced with permission . . . . . 179

6.7 Speed waves generated by the IDM model in presence of  
 severe traffic congestions on the highway scenario [5].  
 © IEEE – Reproduced with permission . . . . . 179

6.8 Average speed profile of vehicular outflow (*top*) and  
 inflow (*bottom*) in presence of an intersection [5].  
 © IEEE – Reproduced with permission . . . . . 180

6.9 Vehicular density in an urban scenario obtained with  
 the IDM-IM model [5]: (a) random mobility and  
 (b) activity-based mobility. © IEEE – Reproduced with  
 permission . . . . . 181

6.10 PDR distribution over hop count with random mobility  
 (*top*) and activity-based mobility (*bottom*) [5]. © IEEE –  
 Reproduced with permission . . . . . 183

6.11 PDR versus time for different configurations [5] (a) single  
 s/d pair, random mobility, (b) single s/d pair, activity-based  
 mobility, and (c) multiple s/d pairs, activity-based mobility,  
 IDM-IM model. © IEEE – Reproduced with permission . . . . . 184

6.12 Voronoi diagram with obstacles and terrain with labeled  
 sites [3]. © IEEE – Reproduced with permission . . . . . 187

6.13 Voronoi diagram for terrain with labeled sites [3]. © IEEE –  
 Reproduced with permission . . . . . 187

6.14 Example of semi-definite node  
 movement [3]. © IEEE – Reproduced with permission . . . . . 189

6.15 Example network scenario for simulation by obstacle  
 mobility model [3]. © IEEE – Reproduced with permission . . . . . 191

6.16 Node density [3]. © IEEE – Reproduced with permission . . . . . 195

6.17 Path length versus time [3]. © IEEE – Reproduced with  
 permission . . . . . 196

6.18 Average link duration [3]. © IEEE – Reproduced with  
 permission . . . . . 197

6.19 Data packet reception [3]. © IEEE – Reproduced with  
 permission . . . . . 197

6.20 Control packet overhead [3]. © IEEE – Reproduced with  
 permission . . . . . 198

6.21 End-to-end latency [3]. © IEEE – Reproduced with  
 permission . . . . . 199

6.22 Data packet reception versus signal attenuation  
 percentage [3]. © IEEE – Reproduced with permission . . . . . 200

6.23 Data packet reception [3]. © IEEE – Reproduced with  
 permission . . . . . 201

6.24 Control packet overhead [3]. © IEEE – Reproduced with  
 permission . . . . . 201
