Contents

Preface	V
1	Introduction <i>1</i>
2	Paraxial Imaging <i>5</i>
2.1	General Remarks <i>7</i>
2.1.1	Paraxial Approximation <i>7</i>
2.1.2	Linear Collineation <i>9</i>
2.1.3	Image Locations <i>10</i>
2.1.4	Magnification <i>14</i>
2.1.5	Lens Equation <i>25</i>
2.1.6	Newtons Equation <i>19</i>
2.1.7	Three-dimensional Systems <i>20</i>
2.2	Single Surface <i>21</i>
2.2.1	Refracting Plane Surface <i>21</i>
2.2.2	Refractive Spherical Surface <i>22</i>
2.2.3	Mirror Surface <i>23</i>
2.3	Single Lens <i>24</i>
2.3.1	Parameters of a Lens <i>24</i>
2.3.2	Cardinal Elements <i>25</i>
2.3.3	Thin Lens <i>28</i>
2.3.4	Thick Lens <i>29</i>
2.3.5	Graphical Image Construction <i>32</i>
2.4	Multiple-component Systems <i>33</i>
2.4.1	System Consisting of Two Thin Components <i>33</i>
2.4.2	Systems Consisting of Several Thin Lenses <i>36</i>
2.5	Invariants <i>36</i>
2.5.1	Helmholtz-Lagrange Invariant <i>36</i>
2.5.2	Abbe Invariant Q <i>39</i>
2.5.3	Paraxial Invariant <i>39</i>
2.5.4	Further Invariants <i>40</i>
2.5.5	Matrix Form of the Helmholtz Invariant <i>40</i>
2.6	Matrix Calculus <i>41</i>

2.6.1	Paraxial ABCD Matrices	41
2.6.2	Properties of the Matrices	44
2.6.3	Matrices of Simple Components	45
2.6.4	Finite Imaging with an Afocal System	48
2.6.5	Decompositions of an ABCD Matrix	49
2.7	Matrices Describing a More General Geometry	51
2.7.1	Two-dimensional 3X3 Matrices	51
2.7.2	Centered 4X4 Matrices	54
2.7.3	General 5x5 Matrices	58
2.8	Literature	59
3	Interfaces	62
3.1	Basics	62
3.1.1	Boundary Conditions	62
3.1.2	The Law of Refraction	63
3.1.3	The Law of Reflection	66
3.2	The Fresnel Equations	67
3.2.1	Definition of the Amplitude Coefficients	67
3.2.2	Reflection	67
3.2.3	Transmission	69
3.2.4	Properties of the Fresnel Equations	69
3.2.5	Stokes Relations	72
3.2.6	Azimuthal Angle	74
3.2.7	Reflectivity and Transmittivity	75
3.2.8	Phase Changes	79
3.2.9	Description of the Refraction in the k-Space	80
3.2.10	Reflection Losses in Optical Systems	82
3.3	Polarization Effects at Interfaces	84
3.3.1	Brewster Angle	84
3.3.2	Degree of Polarization	86
3.4	Evanescent Waves	88
3.4.1	Total Internal Reflection	88
3.4.2	Evanescent Surface Waves	92
3.4.3	Damped Total Internal Reflection	94
3.4.4	Frustrated Total Internal Reflection	95
3.5	Non-geometrical Effects at Reflection	96
3.5.1	The Goos-Haenchen Effect	96
3.5.2	Total Internal Reflection of a Gaussian Beam	100
3.6	Absorbing Media	102
3.6.1	Complex Refractive Index	102
3.6.2	Lambert-Beer Law	103
3.6.3	Reflection at an Absorbing Medium	104
3.6.4	Metals	105
3.6.5	Reflection at Metals	105
3.7	Literature	209

4	Materials	111
4.1	Basics	113
4.1.1	Introduction	113
4.1.2	Optical Parameters	113
4.1.3	Non-optical Properties	114
4.2	Dispersion	114
4.2.1	Definition	114
4.2.2	Wavelengths	116
4.2.3	Characterizing the Dispersion	117
4.2.4	Optical Crowns and Flints	118
4.2.5	Interpolation of the Refractive Index	120
4.2.6	Dispersion of the Group Velocity	123
4.2.7	Chromatic Coordinates According to Buchdahl	124
4.3	Relative Partial Dispersion	125
4.3.1	Definition	125
4.3.2	Line of Normal Dispersion	228
4.3.3	Glasses with Anomalous Partial Dispersion	230
4.3.4	Relative Partial Dispersion in the Glass diagram	232
4.3.5	Hoogland Diagram	133
4.4	Transmission	134
4.4.1	Transmission and Internal Transmission	234
4.4.2	Transmission Edge	236
4.4.3	Transmission of Glasses and Plastics	237
4.5	Glasses	239
4.5.1	General Remarks	239
4.5.2	Glass Diagram	239
4.5.3	Glass Ranges	242
4.5.4	Thermal Properties	243
4.5.5	Data Sheet	246
4.5.6	Mechanical Properties of Glass	247
4.5.7	Chemical Properties of Glass	249
4.5.8	Deliverable Forms of Glass	249
4.5.9	Practical Aspects of the Choice of Glass in Optical Design	249
4.5.10	Special Glasses	250
4.6	Crystals and Special Materials	252
4.6.1	Materials for IR and UV	152
4.6.2	Quartz	254
4.7	Plastics	257
4.7.1	General Properties	257
4.7.2	Optical Properties	258
4.7.3	Transmission	260
4.8	Gases	262
4.8.1	General Remarks	161
4.8.2	Air	262
4.9	Liquids and Cements	162

4.9.1	Water	162
4.9.2	Technical Liquids	163
4.9.3	Immersion Oils	166
4.9.4	Optical Cements	267
4.10	Metals	168
4.10.1	Optical Parameters	168
4.10.2	Reflectivity of Metallic Mirrors	169
4.11	Literature	171
5	Raytracing	173
5.1	The Meaning of Raytracing	174
5.2	Raytracing Scheme	174
5.3	Raytracing Formula Sets	178
5.3.1	General Remarks	178
5.3.2	Paraxial y-u-Method	178
5.3.3	Paraxial s-h- Method	179
5.3.4	Meridional S-U-Method	180
5.3.5	Meridional Q-U-Method	182
5.3.6	Set of Vector Formulas	182
5.3.7	Iterative Calculation of the Intersection Point for Aspherical Surfaces	186
5.4	Raytracing in Optical Systems	189
5.4.1	Description of the Geometry	189
5.4.2	Types of Surface	194
5.4.3	Particular Properties	206
5.4.4	Output Quantities	207
5.4.5	Errors	208
5.4.6	Apodization	208
5.4.7	Polarization Raytracing	209
5.5	Special Components	220
5.5.1	Ideal Lens	220
5.5.2	Raytracing in GRIN media	211
5.5.3	Raytracing for Diffractive Elements	215
5.5.4	Knife-edge Diffraction Model in Raytracing	219
5.6	Differential Rays	220
5.6.1	General Remarks	220
5.6.2	Coddington Equations	220
5.6.3	General Differential Rays	222
5.6.4	Ray Tubes	223
5.7	Non-sequential Raytracing	224
5.7.1	General Remarks	224
5.7.2	Monte-Carlo Raytracing	226
5.8	Literature	227

6	Radiometry	229
6.1	Introduction	230
6.1.1	General Remarks	230
6.1.2	Definition of the Radiometric Quantities	230
6.1.3	Photometric Quantities	232
6.1.4	Radiometric and Photometric Quantities	233
6.1.5	Solid Angle	233
6.1.6	Differential Flux	235
6.1.7	Fundamental Law of Radiometry	235
6.1.8	Projection of the Irradiance	236
6.1.9	Irradiance	237
6.1.10	Spectral Densities of Quantities	237
6.1.11	Energy, Power and Photons	238
6.2	Lambertian Radiator	239
6.2.1	Classical Lambertian Radiator	239
6.2.2	General Lambertian Radiator	240
6.3	Radiation Transfer	241
6.3.1	General Remarks	241
6.3.2	Point Source of Light	242
6.3.3	Radiation Transfer between Surfaces	244
6.3.4	Numerical Radiation Transfer	247
6.4	Radiometry of Optical Systems	248
6.4.1	Optical System	248
6.4.2	Radiation Transport with Interaction	249
6.4.3	Aplanatic Systems	250
6.4.4	Natural Vignetting	252
6.4.5	Radiometry in Real Optical Systems	259
6.4.6	Ray Tube Model	260
6.5	Description of Radiation Transport in the Phase Space	263
6.5.1	Helmholtz - Lagrange Invariant	263
6.5.2	Phase Space Coordinates	264
6.5.3	Phase Space Representation of Radiation Transport	265
6.6	Literature	267
7	Light Sources	269
7.1	Introduction	271
7.1.1	Classification	271
7.1.2	Efficiency	271
7.1.3	Electromagnetic Spectrum	273
7.1.4	Standard Light Sources	275
7.1.5	Daylight and Sunlight	276
7.2	Thermal Radiators	278
7.2.1	Plancks Formula	278
7.2.2	Optical Efficiency	281
7.2.3	Radiation Temperature	282

7.2.4	Wiens Displacement Law	283
7.2.5	Stefan-Boltzmann Law	284
7.2.6	Rayleigh-Jeans Radiation Formula	284
7.2.7	Wiens Law of Radiation	285
7.3	Classical Lamps	285
7.3.1	Incandescent Bulbs	285
7.3.2	Halogen Lamps	288
7.3.3	Electrical Arc Lamps / Discharge Lamps	288
7.3.4	Xenon Lamps	290
7.3.5	Mercury-Xenon Lamps	291
7.3.6	High-pressure Mercury Lamps	291
7.4	Diodes	292
7.4.1	Types of Light Emitting Diodes	292
7.4.2	Organic Light Emitting Diodes	294
7.4.3	Spectra of Light Emitting Diodes	295
7.4.4	Emission Characteristic of LEDs	297
7.4.5	White Light Emitting Diodes	299
7.5	Laser Light Sources	300
7.5.1	Overview	300
7.5.2	Comparison of Lasers with Classical Light Sources	300
7.5.3	Semiconductor Laser	303
7.5.4	Gas Laser	309
7.5.5	Solid State Laser	309
7.5.6	Excimer Laser	311
7.6	Model Descriptions of Radiation Sources	314
7.6.1	Models of Light Sources	314
7.6.2	Characterization of the Spatial Emission	315
7.6.3	Spectral Characteristic	318
7.6.4	Raytracing Model Description of Sources	319
7.7	Literature	321
8	Sensor Technology and Signal Processing	323
8.1	Introduction	325
8.1.1	Signal Chain	325
8.1.2	Information Transfer in Optics	325
8.1.3	Adjustment of the Beam	327
8.1.4	Information Gain	328
8.1.5	Spatial Discretization and Resolution	331
8.1.6	Discretization of the Signal Strength	333
8.2	Sensor Characteristics	335
8.2.1	General Remarks	335
8.2.2	Signal-to-noise Ratio	336
8.2.3	Precision of a Sensor	337
8.2.4	Dynamic Range	339
8.2.5	Time Behavior	340

- 8.2.6 Directional Sensitivity 342
- 8.2.7 Detection of Color Signals 343
- 8.3 Special Types of Sensor 345
 - 8.3.1 Classification 345
 - 8.3.2 Photoconductive Detector 346
 - 8.3.3 CCD Arrays 348
 - 8.3.4 Avalanche Photodiodes 354
 - 8.3.5 Photographic Film 354
- 8.4 Sampling 357
 - 8.4.1 Fourier Transformation 357
 - 8.4.2 Sampling Theorem 358
 - 8.4.3 Sampling of a Band-limited Signal 362
 - 8.4.4 Detector Sampling 362
- 8.5 Signal Processing 364
 - 8.5.1 General Remarks 364
 - 8.5.2 Point Operations 364
 - 8.5.3 Nearest-neighbor Operations 365
 - 8.5.4 Fourier Filter 365
 - 8.5.5 Savitzky-Golay Filter 368
- 8.6 Noise 370
 - 8.6.1 Introduction 370
 - 8.6.2 Types of Noise 372
 - 8.6.3 Frequency-Dependence of the Noise 374
 - 8.6.4 Correction of the Background Noise 375
- 8.7 Special Methods of Detection 376
 - 8.7.1 Heterodyne Detection 376
 - 8.7.2 Lock-in Principle 377
- 8.8 Literature 378

- 9 Theory of Color Vision 379
 - 9.1 Introduction 380
 - 9.2 Color Vision of the Human Eye 380
 - 9.2.1 Spectral Sensitivity of the Eye 380
 - 9.2.2 Transmission of the Eye 383
 - 9.2.3 Bezold Effect and Restimulation 385
 - 9.2.4 Physiological Chromatic Sensation 386
 - 9.3 Phenomenological Theory of Color Vision 387
 - 9.3.1 Grassmanns Basic Laws 387
 - 9.3.2 Light and Body Color 388
 - 9.3.3 Additive Color Mixture 390
 - 9.3.4 Three-color Mixture 390
 - 9.3.5 Maxwells Color Triangle 391
 - 9.4 Colorimetry 394
 - 9.4.1 General Remarks 394
 - 9.4.2 Spectral Matching Functions 394

- 9.4.3 Conversion Matrices 398
- 9.4.4 Standard Spectral Value Functions of the CIE Standard System 399
- 9.4.5 Normalized Color Coordinates 400
- 9.5 Color Triangle 402
 - 9.5.1 Basic Properties 402
 - 9.5.2 Complementary Colors 403
 - 9.5.3 Color Saturation 405
 - 9.5.4 Helmholtz Color Values 408
 - 9.5.5 Mixture of Colors in the Color Triangle 409
 - 9.5.6 Classical Color Terms 410
 - 9.5.7 Color Temperature 412
 - 9.5.8 Brightness 414
 - 9.5.9 Color Body 415
 - 9.5.10 Color Differences 416
- 9.6 Alternative Basic Systems 417
 - 9.6.1 RGB Primary Colors 417
 - 9.6.2 IHS Color Representation According to Munsell 421
 - 9.6.3 u' v'-Chromatiriry Chart 423
- 9.7 Literature 424

- 10 Optical Systems 425
 - 10.1 Special Properties of Lenses 426
 - 10.1.1 Bending of Lenses 426
 - 10.1.2 Position Parameter 429
 - 10.1.3 Ideal Lens 430
 - 10.1.4 Volume of a Lens 431
 - 10.2 Special Rays in Optical Systems 432
 - 10.2.1 Numerical Aperture and Stop Number 432
 - 10.2.2 Canonical Coordinates 434
 - 10.2.3 Bundles and Ray Fans 438
 - 10.2.4 Special Rays 439
 - 10.2.5 Principal Planes 441
 - 10.3 Pupils 442
 - 10.3.1 Diaphragms 442
 - 10.3.2 Definition of Pupils 444
 - 10.3.3 Spherical Pupils 446
 - 10.3.4 Pupil Sampling 448
 - 10.3.5 Vignetting 452
 - 10.3.6 Variable Pupil Position 454
 - 10.3.7 Special Stop Positions 455
 - 10.3.8 Interlinked Bundles 458
 - 10.3.9 Perspective 458
 - 10.4 Delano Diagram 463
 - 10.4.1 Definition 463
 - 10.4.2 Properties of the Delano Diagram 464

10.4.3	Examples	468
10.4.4	Vignetting	472
10.5	Special Aspects	474
10.5.1	Curved Objects	474
10.5.2	Scheimpflug Imaging	475
10.5.3	Anamorphic Imaging	479
10.5.4	Introduction of thick lenses	480
10.6	Literature	483
11	Aberrations	485
11.1	General Considerations	486
11.2	Description of Aberrations	487
11.3	Ray Aberrations	490
11.3.1	Longitudinal Aberrations	490
11.3.2	Transverse Aberrations	491
11.3.3	Spot Diagrams	492
11.3.4	Caustics	493
11.3.5	Seidel Aberrations	494
11.4	The Sine Condition	495
11.5	Wave Aberrations	497
11.5.1	Definition	497
11.5.2	Tilt	499
11.5.3	Defocus	500
11.5.4	Zernike Polynomials	501
11.6	Spherical Aberration	506
11.6.1	Introduction	506
11.6.2	Aplanatic Surfaces	507
11.6.3	Aplanatic Lenses	509
11.7	Astigmatism	510
11.8	Field Curvature	511
11.8.1	Image Surfaces	511
11.8.2	Petzval Theorem	523
11.9	Coma	524
11.10	Distortion	526
11.11	Chromatic Longitudinal Aberrations	528
11.12	Chromatic Transverse Aberrations	520
11.13	Literature	522
12	Wave Optics	523
12.1	Basic Principles	524
12.1.1	Wave Equation	524
12.1.2	TEA and LPIA Approximations for Thin Components	525
12.1.3	Kirchhoff Integral	527
12.1.4	Fresnel Approximation	530
12.1.5	Fraunhofer Integral	532

- 12.1.6 Fresnel Number 532
- 12.1.7 Diffraction of an Aperture 533
- 12.1.8 Paraxial Approximation 535
- 12.1.9 Model Approximations for the Description of Optical Systems 536
- 12.1.10 Spot Model Calculations 538
- 12.2 Point-spread Function 539
 - 12.2.1 Ideal Point Image 539
 - 12.2.2 Scaling Factors 542
 - 12.2.3 Transverse Airy Distribution 543
 - 12.2.4 Axial Distribution 545
 - 12.2.5 Point-spread Function and Aberrations 546
- 12.3 Fourier Theory of Image Formation 548
 - 12.3.1 Spatial Frequency and Expansion in Plane Waves 548
 - 12.3.2 Plane Wave Representation 549
 - 12.3.3 Phase Effect of a Lens 550
 - 12.3.4 Resolution Model 551
 - 12.3.5 4-f-Fourier Model 554
 - 12.3.6 Complete 6-f-Fourier Model 557
 - 12.3.7 Coherent Image Formation 559
 - 12.3.8 Incoherent Image Formation 560
- 12.4 Transfer Functions 562
 - 12.4.1 Definition 562
 - 12.4.2 OTF of Ideal Systems 564
 - 12.4.3 Contrast Transfer 565
 - 12.4.4 Sagittal and Tangential Structures 566
- 12.5 Literature 568

- 13 Plano-optical Components
 - 13.1 Plane-parallel plates 571
 - 13.1.1 Beam Displacement 571
 - 13.1.2 Aberrations 572
 - 13.1.3 Plane-parallel Plate in a Convergent Beam 574
 - 13.1.4 Reflections at Plane-parallel Plates 576
 - 13.2 Dispersion Prisms 576
 - 13.2.1 General Considerations 577
 - 13.2.2 Dispersion by a Prism 578
 - 13.2.3 Thin-prism Approximation 579
 - 13.2.4 Symmetric Prisms 580
 - 13.2.5 Prism Magnification 580
 - 13.2.6 Astigmatism of a Wedge Prism 582
 - 13.2.7 Curved Spectral Lines Produced by a Prism 582
 - 13.2.8 Variable-angle Prisms 583
 - 13.2.9 Achromatic Prism Pairs 584
 - 13.2.10 Direct-vision Prisms 585
 - 13.2.11 Double Amici Prisms 586

13.2.12	Wernicke-type Direct-vision Prisms	587
13.2.13	Wadsworth Prism Mounting	588
13.2.14	Fery Prisms	589
13.3	Reflection Prisms	590
13.3.1	Function of Reflection Prisms	590
13.3.2	The Tunnel Diagram	591
13.3.3	Dimensioning of Prisms	592
13.3.4	Total Internal Reflection	595
13.3.5	Image Reorientation	596
13.3.6	Matrix Calculations for Reflection Prisms	599
13.3.7	Roof Prisms	601
13.3.8	Classification of the Reflection Prisms	604
13.4	Construction Designs for Reflection Prisms	605
13.4.1	General Consideration	605
13.4.2	Single Prism Types	606
13.4.3	Composite Prisms	624
13.5	Prism Systems	630
13.5.1	Sliding Prism Pair	630
13.5.2	Scanning by Rotating Wedge Pair	632
13.5.3	Anamorphic Prism Pair	632
13.5.4	Double Dove Prism	633
13.5.5	Beam Splitters	635
13.6	Filters	639
13.6.1	General Principles of Operation	639
13.6.2	Characterization of Filters	640
13.6.3	Filter Types	643
13.6.4	Interference Filters	644
13.6.5	Absorption Filters	645
13.7	Literature	645
14	Gratings	647
14.1	Diffraction by a Slit	648
14.2	Diffraction Gratings	651
14.2.1	General Considerations	651
14.2.2	Interference Function	652
14.2.3	Diffraction by a Grating	655
14.2.4	Width of the Diffraction Orders	658
14.2.5	Grating Dispersion	659
14.2.6	Grating Efficiency	662
14.3	Blazed Gratings	663
14.3.1	The Concept of Blazing	663
14.3.2	Particular Case of Normal Incidence	666
14.3.3	Littrow Arrangement	667
14.3.4	Real Blazed Gratings	668
14.4	Fourier Theory of the Grating Diffraction	669

- 14.4.1 Ewald Model of the Grating Diffraction 669
- 14.4.2 Rectangular Amplitude Grating 671
- 14.4.3 Grating Structure Function 672
- 14.4.4 Fourier Optics of the Blazed Grating 672
- 14.5 Transmission Gratings 673
 - 14.5.1 Blaze Condition 673
 - 14.5.2 Carpenter Prisms 674
 - 14.5.3 Diffractive Lenses 675
- 14.6 Types of Grating 677
 - 14.6.1 Classification 677
 - 14.6.2 Sine Phase Gratings 679
 - 14.6.3 Laminary Reflection Gratings 680
 - 14.6.4 Echelette Gratings 681
 - 14.6.5 Ronchi Gratings 682
 - 14.6.6 Damman Gratings 684
- 14.7 Gratings in Image Formation Systems 686
- 14.8 Diffraction by a Grating in the General Case 688
 - 14.8.1 Non-paraxial Diffraction by a Grating 688
 - 14.8.2 Conical Diffraction by a Grating 690
- 14.9 Literature 692

- 15 Special Components 693**
 - 15.1 Aspherical Devices 695
 - 15.1.1 Introduction 695
 - 15.1.2 Conic Sections 695
 - 15.1.3 Polynomial Aspherical Surfaces 700
 - 15.1.4 Conical Surfaces 703
 - 15.1.5 Parameters for Aspherical Surfaces 704
 - 15.2 Gradient-index Lenses 705
 - 15.2.1 Parabolic Lateral Gradient-index 705
 - 15.2.2 Axial Linear Gradient-index Media 707
 - 15.2.3 Gradium Media 708
 - 15.2.4 Spherically Corrected Gradient-index Lenses 711
 - 15.3 Diffusing Disks 714
 - 15.3.1 Description of the Effect of a Diffusing Disk 714
 - 15.4 Cylinder Lenses 717
 - 15.5 Simple Cylinder Lenses 717
 - 15.5.1 Rotatable Pair of Cylinder Lenses 717
 - 15.5.2 Alvarez Lens 728
 - 15.6 Dynamic Light Modulators 719
 - 15.6.1 General Remarks 719
 - 15.6.2 Digital Mirror Device 720
 - 15.6.3 Liquid Crystal Devices 722
 - 15.7 Fresnel Lenses 729
 - 15.7.1 Principle 729

15.7.2	Basic Equations	730
15.7.3	Total Internal Reflection	731
15.7.4	Aberrations	732
15.7.5	Stray Light	733
15.7.6	Applications	734
15.7.7	Radiometric Aspects	735
15.8	Light Pipes	737
15.8.1	Light-guiding Rods	737
15.8.2	Slab Homogenizer	738
15.8.3	Tapers	747
15.9	Axicons	751
15.9.1	Refractive Axicons	751
15.9.2	Refractive Axicon with Lens	752
15.9.3	Reflective Axicons	753
15.9.4	Axicon for an Axial Profile Formation	755
15.10	Literature	757
16	Optical Measurement and Testing Techniques	759
16.1	Overview	761
16.2	Measurement of the Focal Length	761
16.2.1	Measurement with a Collimator	761
16.2.2	Gauss Method	762
16.3	Measurement of Angles	763
16.3.1	Autocollimator	763
16.3.2	Interferometric Test of Prism Angles	764
16.3.3	Alignment Telescope	768
16.4	Centering	769
16.4.1	Measuring Centering in Reflection	769
16.4.2	Measuring Centering in Transmission	770
16.4.3	Interference Method	771
16.5	Measuring the Index of Refraction	773
16.5.1	Refractometer	773
16.5.2	Toeplers Schlieren Method	775
16.6	Surface-shape Measurement	776
16.6.1	Triangulation	776
16.6.2	Fringe Projection	776
16.6.3	Optical Coherence Tomography	778
16.7	Testing of Surface Radii and Shapes	780
16.7.1	Newton Interferometer	780
16.7.2	Twyman-Green Interferometer	782
16.7.3	Fizeau Interferometer	784
16.7.4	Evaluation of the Fringes	785
16.8	Measuring Wavefronts	786
16.8.1	Hartmann-Shack Wavefront Sensor	786
16.8.2	Hartmann Test	790

16.9	Measurement of the Optical Transfer Function	793
16.9.1	General Considerations	793
16.9.2	Measurement by Edge Imaging	794
16.9.3	Measurement by Line Imaging	796
16.9.4	Measurement of Grating Structures	797
16.10	Beam-quality Measurement	799
16.10.1	Overview	799
16.10.2	Knife-edge Method	800
16.10.3	Scanning-slit Method	802
16.10.4	Ronchi Test	803
16.11	Coherence Measurement	807
16.11.1	Youngs Experiment	807
16.12	Polarization Measurement	808
16.13	Stray-light Measurement	810
16.14	Color Measurement	811
16.14.1	Overview	811
16.14.2	Spectral Photometry	812
16.15	Literature	813
	Index	815
