TABLE OF CONTENTSxiv
1. THEORETICAL INTERPRETATION OF FORMATION OF MOIRÉ FRINGES1
1.1. A Fourier Series Approach to the Description of Moiré Patterns1
1.1.1. Derivation of the general equation2
1.1.2. Information display by moiré fringes4
1.1.3. Profile of moiré fringes8
1.2. The Parametric Equation Method14
1.2.1. Two families of equidistant straight lines15
1.2.2. Equidistant concentric circles superimposed on equidistant straight lines16
1.2.3. Two sets of equidistant concentric circles17
1.2.4. Zone grating superimposed on equispaced straight lines18
1.2.5. Zone grating superimposed on another zone grating19
1.2.6. Equiangular straight lines superimposed on equispaced straight lines21
1.3. Description of Moiré in Terms of Vectorial Sums in Fourier Space22
1.4. Moiré as an Aliasing Phenomenon by Undersampling24
References28
2. INCOHERENT METHODS OF SUPERIMPOSITION OF STRUCTURES32
2.1. Additive Type Moiré32
2.2. Subtractive Type Moiré37
2.3. Multiplicative Type Moiré38
2.4. Examples of Two-structure Superimpositions41
2.5. Special Techniques - Use of Structures with Orthogonal Transmittances44
2.5.1. Coding by spectral filters45

2.5.2. Coding by orthogonal polarization filters47
References50
3. COHERENT METHODS OF SUPERIMPOSITION52
3.1. Fringe Pattern Formation by Filtering of the Double Diffraction Orders52
3.1.1. Information content of diffraction orders of deformed grating52
3.1.2. Double diffraction arrangement and coherent optical processor54
3.1.3. Fringe multiplication and sensitivity enhancement55
3.1.4. Contrast improvement of the additive type moiré59
3.1.5. Fringe shifting and mismatch methods under coherent superimposition61
3.1.6. Separation of moiré fringe families62
3.1.7. Optical differentiation of grating encoded information62
3.2. Overlapping Real Time Interference Fringes with a Recorded Pattern66
References67
4. INFLUENCE OF THE TYPE OF ILLUMINATION AND SEPARATION OF GRATINGS ON THE INTENSITY DISTRIBUTION IN MOIRÉ FRINGES69
4.1. The Case of Coherent Illumination70
4.1.1. The double diffraction system - general considerations70
4.1.2. Producing binary amplitude gratings in the double diffraction system77
4.2. The Case of Incoherent Illumination79
4.2.1. Introduction79
4.2.2. Multiple incoherent superimposition of self-imaging81
4.2.3. Utilization of gap effect with a focused observation system onto a second grating plane87
4.3. The Case of Partially Coherent Illumination88
4.3.1. Self-imaging under partially coherent illumination88
4.3.2. Double-grating system with a defocused observation plane91
References95

5. MOIRÉ DISPLACEMENT TRANSDUCERS	99
5.1. Basic Concepts	99
5.2. Grating Reading Heads	102
5.2.1. Transmission reading heads	102
5.2.2. Reflection reading heads	104
5.2.3. Projection reading heads	106
5.2.4. Interference reading heads	106
5.3. Accuracy of Moiré Fringe Transducers	107
5.3.1. Interpolation errors	107
5.3.2. Error sources and correction methods	111
5.3.2.1. Phase quadrature errors	112
5.3.2.2. Amplitude errors	117
5.3.2.3. Residual bias errors	119
5.3.2.4. Waveform residual error	120
5.3.2.5. Error considerations for angular measurement	120
5.3.3. Interpolation methods - implementation	122
5.3.3.1. Amplitude tracking	122
5.3.3.2. Phase tracking	124
5.3.4. Diffraction effects	127
5.3.4.1. Theoretical formulation	128
5.3.4.2. Use of binary amplitude gratings with various opening numbers	129
5.3.4.3. Moiré fringe patterns generated by real nonmonochromatic light source	132
5.3.4.4. Influence of axial defocus of photodetectors	132
References	135
6. MOIRÉ FRINGE ALIGNMENT METHODS	140
6.1. Optical Alignment by Whole-Field Detection of Moiré Fringes	140
6.1.1. In-plane alignment aids	140
6.1.2. Alignment in Space	143
6.2. Moiré Patterns for Three Point Alignment Technique	144
6.2.1. Introduction	144
6.2.2. Derivation of component structures from moiré patterns. Moiré patterns by pure translation.	146
6.3. Submicron Alignment Methods for Lithography	156
6.3.1. Coherent moiré alignment for proximity printing	157
6.3.2. Coherent moiré alignment for optical projection printing	163
References	167

7. MOIRÉ PHOTOGRAPHY	170
7.1. Principles	171
7.2. Implementation	173
7.2.1. Camera	173
7.2.2. Specimen gratings	174
7.3. Fringe Pattern Recording and Processing	179
7.4. Examples of Applications	180
References	185
8. MOIRÉ METHODS IN INTERFEROMETRY	186
8.1. Moiré Methods in Two-beam Interferometry with a Reference Wavefront	186
8.1.1. Subtraction of instrumental errors	186
8.1.2. Reducing or eliminating the carrier fringes in an interferogram	190
8.1.3. Whole-field differentiation of fringe patterns	192
8.1.4. Addition of phase functions	193
8.1.5. Two-wavelength interferometry	194
8.2. Moiré Methods in the Two-beam Interferometry with Conjugate Wavefronts	196
8.2.1. Determination of displacements	196
8.2.2. Determination and processing of displacement derivatives	200
8.3. Moiré Methods in Grating Shearing Interferometry	207
8.3.1. Talbot interferometry	207
8.3.2. Two-beam lateral shear interferometers	213
References	216
9. SHADOW MOIRÉ TOPOGRAPHY	220
9.1. Principles	220
9.2. Theoretical Description	222
9.3. Localization and Contrast of Moiré Fringes	224
9.4. Absolute Fringe Order Determination	227
9.5. Relative Fringe Order Determination	230
9.5.1. Techniques for ordinary moiré fringes	231
9.5.2. Techniques for moiré fringes with asymmetrical profile	234
9.6. Instrumental Considerations	236
9.6.1. Shadow grids	236
9.6.2. Light Sources	240
9.6.3. Object Surface Preparation	241

9.7. Applications241
References249
10. PROJECTION MOIRÉ TOPOGRAPHY254
10.1. Principles and Basic Configurations254
10.2. Configurations with a Single Projection System256
10.2.1. Projection and observation systems with axes parallel256
10.2.2. Projection and observation systems with axes intersecting258
10.3. Systems without Grating in the Observation System261
10.4. Double Projection Moiré Topography268
10.5. Off-line Demodulation Methods271
10.6. Contrast of Moiré Fringes273
10.7. Absolute and Relative Fringe Ordering274
10.7.1. Absolute fringe ordering274
10.7.2. Relative fringe ordering - the case of processing of symmetrical profile moiré fringes275
10.7.3. Relative fringe ordering - methods introducing asymmetric profile moiré fringes277
10.8. Instrumental Considerations277
10.8.1. Projection and detection gratings277
10.8.2. Light sources and illumination optics280
10.8.3. Demodulation optics and pattern recording280
10.9. Applications282
References289
11. REFLECTION MOIRÉ METHOD295
11.1. Ligtenberg and Rieder-Ritter Configurations295
11.1.1. Determination of the slope of elements in the surface295
11.1.2. Differentiation of Moiré Patterns (Curvature Determination)302
11.2. Reflection Moiré Arrangements for Studying Dynamic Events308
11.2.1. Slope angle determination308
11.2.2. Curvature determination312
11.3. Specific Experimental Arrangement for Studying the Flexure of Plates315
11.4. Applications317
References322

12. MOIRÉ AS A GRAPHICAL SOLUTION TO PHYSICAL PROBLEMS325
12.1. Wave Physics325
12.1.1. Binary amplitude grating as an analog to electromagnetic wave.325
12.1.2 Modeling of interference phenomena326
12.2. Field Physics333
12.2.1. Demonstration of Electric-Force Lines334
12.2.2. Solving potential field problems335
12.2.3. Demonstrating centrifugal spherical waves.336
12.3. Interpretation of Images Formed in the Field-ion Microscope337
References338
13. AUTOMATIC FRINGE PATTERN ANALYSIS339
13.1. Introduction339
13.2. Intensity methods342
13.2.1. Fringe pattern preprocessing345
13.2.2. Fringe recognition346
13.2.3. Fringe order assignment352
13.3. Phase measuring methods: general considerations355
13.4. Electronic phase-measuring methods358
13.5. Analytical phase-measuring methods360
13.5.1. Spatial-carrier fringe pattern analysis362
13.5.1.1. Fourier transform method362
13.5.1.2. Space-domain processing368
13.5.1.3. Computational complexities371
13.5.2. Phase-shifting method372
13.5.2.1. Phase-shifting algorithms372
13.5.2.2. Removal of phase ambiguities (Phase unwrapping)373
13.5.2.3. Temporal phase-shifting method.375
13.5.2.4. Spatial phase-shifting techniques388
13.5.2.5. Spatial-carrier phase shifting technique395
13.6. Comparison of automatic fringe pattern analysis methods398
13.7. Future trends400
