List of Tables	xvii
Acronyms	xxi
Preface	xxv
Introduction	xxvii

Part I Introduction to the Hipparcos mission

1. THE HIPPARCOS MISSION	3
1.1 Overture	3
1.2 The mission	17
1.3 The published data	25
1.4 Concepts of the new reduction	31
2. HIPPARCOS ASTROMETRY	39
2.1 From positions and velocities to astrometric data	39
2.2 The Hipparcos astrometric data	46
2.3 Reconstruction of the along-scan rotation phase	56
2.4 Grid distortions	58
2.5 Astrometric-parameter solutions	63

Part II Exploring the Hipparcos Astrometric Data

3. INDIVIDUAL, SINGLE STARS	73
3.1 Precisions and accuracies	73
3.2 Correlations	80
3.3 Parallaxes	85
3.4 Proper motions	95
3.5 Disturbed solutions	100
3.6 Comparison with the ICRS	109
4. THE ASTROMETRIC DATA FOR COMPOSITE IMAGES AND ORBITAL BINARIES	113
4.1 The modulated signal for small-separation double stars	114
4.2 Astrometric parameters for double stars	126
4.3 Double stars with two catalogue entries	131
4.4 Variable-brightness of one component	132
4.5 Multiple systems	135
4.6 Orbital motions	137
5. GROUPS OF SINGLE STARS	143
5.1 Solving for common parameters	143
5.2 Application to star clusters	145
5.3 Calibrating luminosities	163
5.4 Conclusions	176
6. KINEMATICS OF THE SOLAR NEIGHBOURHOOD	177
6.1 Systematic motions	177
6.2 The distribution of nearby stars	186

Part III A Description of the Contents and Peculiarities of the Hipparcos Photometric Data

7. THE PHOTOMETRIC DATA	199
7.1 The Hipparcos photometric pass bands	199
7.2 Formal errors and variability indicators	204
7.3 Variability analysis	208
7.4 Newly discovered variables	214

Part IV Hipparcos Attitude Modelling

8. A FREE-FLOATING RIGID BODY IN SPACE	219
8.1 Dynamics of a rigid body in space	219
8.2 The internal torques and inertia tensor	223
8.3 External torques acting on the satellite	226
8.4 Non-rigidity	236
9. THE TORQUES ON HIPPARCOS AS OBSERVED OVER THE MISSION	239
9.1 Relation between attitude and torque reconstruction	239
9.2 Solar radiation torques	241
9.3 Magnetic torques and the remaining torque variations	249
9.4 Predictability of the environmental torques	251
10. FULLY-DYNAMIC ATTITUDE FITTING	255
10.1 Outline of the method	255
10.2 The integration engines	257
10.3 Implementing the gyro data	260
10.4 Implementing the star mapper data	263
10.5 Implementing the IDT transit data	269
10.6 Conclusions	282

Part V Summary of Selected Spacecraft and Payload Calibration Results

11. THE MISSION TIMELINE	287
11.1 Trend analysis and anomalies	287
11.2 Data coverage and detector response	298
12. PAYLOAD CALIBRATIONS	299
12.1 The optical transfer function	301
12.2 Large-scale geometric-distortion calibration	304
12.3 Photometric calibrations	311
13. SPACECRAFT-PARAMETER CALIBRATIONS	329
13.1 The on-board clock	329
13.2 Gyro characteristics	335
13.3 Thruster firings and the Centre of Gravity	340

Part VI The Next Generation

14. GAIA	349
14.1 Introduction	349
14.2 The spacecraft and payload	349
14.3 The mission plan	352
14.4 The astrometric data reduction	354
14.5 The photometric data reduction	355
14.6 The spectroscopic data reduction	360
14.7 Data-analysis challenges	363
14.8 Organization of the data processing and analysis	365
Appendices	369
A Transformations for heliotropic and Tait-Bryant angles	369
B Spline functions	373
C Linear Least Squares and Householder Orthogonal Transformations	377
D Chain solutions, running solutions, and common parameters	381
E Orbit parameters for binary stars	385
F Reference orbital parameters	393
G The data disk	403
G.1 The colour figures	403
G.2 The science data	406
G.3 Payload calibration data	410
G.4 Spacecraft calibration data	416
Bibliography	419
Subject index	439
Object index	443
