1 Image Denoising: Past, Present, and Future 1
Xin Li
1.1 Introduction 1
1.2 Historical Review of Image Denoising 2
1.3 First Episode: Local Wiener Filtering 5
1.4 Second Episode: Understanding Transient Events 8
1.4.1 Local Wiener Filtering in the Wavelet Space 8
1.4.2 Wavelet vs. DCT Denoising 9
1.5 Third Generation: Understanding Nonlocal Similarity 13
1.6 Conclusions and Perspectives 17
1.6.1 Representation versus Optimization 17
1.6.2 Is Image Denoising Dead? 18
Bibliography 18

2 Fundamentals of Image Restoration 25
Bahadir K. Gunturk
2.1 Introduction 25
2.2 Linear Shift-Invariant Degradation Model 26
2.3 Image Restoration Methods 29
2.3.1 Least Squares Estimation 29
2.3.2 Steepest Descent Approach 33
2.3.3 Regularization Models 34
2.3.4 Robust Estimation 35
2.3.5 Regularization with ℓ_p Norm, $0 < p \leq 1$ 36
2.3.6 Wiener Filter 39
2.3.7 Bayesian Approach 40

2.3.8 Projection onto Convex Sets 42
2.3.9 Learning-Based Image Restoration 44
2.4 Blind Image Restoration 46
2.4.1 Alternating Minimization 47
2.4.2 Iterative Blind Deconvolution 48
2.5 Other Methods of Image Restoration 48
2.6 Super Resolution Image Restoration 50
2.7 Regularization Parameter Estimation 51
2.8 Beyond Linear Shift-Invariant Imaging Model 52
2.9 Summary 53
Bibliography 53

3 Restoration in the Presence of Unknown Spatially Varying Blur 63
Michal Šorel and Filip Šroubek
3.1 Introduction 63
3.2 Blur models 64
3.2.1 Camera Motion Blur 70
3.2.2 Scene Motion Blur 72
3.2.3 Defocus and Aberrations 73
3.3 Space-Variant Super Resolution 75
3.3.1 Algorithm 75
3.3.2 Splitting 77
3.3.3 PSF Estimation 78
3.3.4 PSF Refinement 80
3.3.5 Deconvolution and Super Resolution 80
3.3.6 Experiments 83
3.4 Summary 84
Bibliography 84

4 Image Denoising and Restoration Based on Nonlocal Means 89
Peter van Beek, Yeping Su, and Junlan Yang
4.1 Introduction 89
4.2 Image Denoising Based on the Nonlocal Means 92
4.2.1 NLM Filter 92
4.2.2 Iterative NLM Denoising 97
4.3 Image Deblurring Using Nonlocal Means Regularization 99
4.3.1 Iterative Deblurring 99
4.3.2 Iterative Deblurring with Nonlocal Means Regularization 100
4.4 Recent Nonlocal and Sparse Modeling Methods 101
4.5 Reducing Computational Cost of NLM-Based Methods 107
4.6 Conclusions 109
Bibliography 111

5 Sparsity-Regularized Image Restoration: Locality and Convexity Revisited 115
Weisheng Dong and Xin Li
5.1 Introduction . . . 115
5.2 Historical Review of Sparse Representations . . . 117
5.3 From Local to Nonlocal Sparse Representations . . . 118
5.3.1 Local Variations: Wavelets and Beyond . . . 118
5.3.2 Nonlocal Similarity: From Manifold Learning to Subspace Constraint Exploitation . . . 120
5.4 From Convex to Nonconvex Optimization Algorithms . . . 124
5.5 Reproducible Experimental Results . . . 127
5.5.1 Image Deblurring . . . 127
5.5.2 Super Resolution . . . 128
5.5.3 Compressed Sensing . . . 129
5.6 Conclusions and Connections . . . 131
Bibliography . . . 133

6 Resolution Enhancement Using Prior Information 141
Hsin M. Shieh, Charles L. Byrne, and Michael A. Fiddy
6.1 Introduction . . . 141
6.2 Fourier Transform Estimation and Minimum L^2-Norm Solution . . . 143
6.2.1 Hilbert Space Reconstruction Methods . . . 143
6.2.2 Minimum L^2-Norm Solutions . . . 144
6.2.3 Case of Fourier-Transform Data . . . 144
6.2.4 Case of Under-Determined Systems of Linear Equations . . . 145
6.3 Minimum Weighted L^2-Norm Solution . . . 146
6.3.1 Class of Inner Products . . . 147
6.3.2 Minimum $\mathcal{T}$-Norm Solutions . . . 148
6.3.3 Case of Fourier-Transform Data . . . 148
6.3.4 Case of $p(x) = \chi_X(x)$ . . . 149
6.3.5 Regularization . . . 150
6.3.6 Multidimensional Problem . . . 153
6.3.7 Case of Radon-Transform Data: Tomographic Data . . . 154
6.3.8 Under-Determined Systems of Linear Equations . . . 154
6.3.9 Discrete PDFT . . . 155
6.4 Solution Sparsity and Data Sampling . . . 157
6.4.1 Compressed Sensing . . . 157
6.4.2 Sparse Solutions . . . 158
6.4.3 Why Sparseness? . . . 158
6.4.4 Tomographic Imaging . . . 160
6.4.5 Compressed Sampling . . . 161
6.5 Minimum L^1-Norm and Minimum Weighted L^1-Norm Solutions . . . 161
6.5.1 Minimum L^1-Norm Solutions . . . 161

6.5.2 Why the One-Norm? . . . 162
6.5.3 Comparison with the PDFT . . . 163
6.5.4 Iterative Reweighting . . . 163
6.6 Modification with Nonuniform Weights . . . 164
6.6.1 Selection of Windows . . . 164
6.6.2 Multidimensional Case . . . 165
6.6.3 Challenge of the Modified PDFT for Realistic Applications . . . 165
6.6.4 Modified Strategy in the Choice of Weighted Windows . . . 167
6.7 Summary and Conclusions . . . 169
Bibliography . . . 171

7 Transform Domain-Based Learning for Super Resolution Restoration 175
Prakash P. Gajjar, Manjunath V. Joshi, and Kishor P. Upla
7.1 Introduction to Super Resolution . . . 175
7.1.1 Limitations of Imaging Systems . . . 176
7.1.2 Super Resolution Concept . . . 176
7.1.3 Super Resolution: Ill-Posed Inverse Problem . . . 177
7.2 Related Work . . . 178
7.2.1 Motion-Based Super Resolution . . . 178
7.2.2 Motion-Free Super Resolution . . . 180
7.2.3 Learning-Based Super Resolution . . . 181
7.3 Description of the Proposed Approach . . . 183
7.3.1 Image Acquisition Model . . . 184
7.3.2 Learning the Initial HR Estimation . . . 185
7.3.3 Degradation Estimation . . . 185
7.3.4 Image Field Model and MAP Estimation . . . 186
7.3.5 Applying the Algorithm to Color Images . . . 190
7.4 Transform Domain-Based Learning of the Initial HR Estimate . . . 190
7.4.1 Learning the Initial HR Estimate Using DWT . . . 191
7.4.2 Initial Estimate Using Discrete Cosine Transform . . . 193
7.4.3 Learning the Initial HR Estimate Using Contourlet Transform . . . 197
7.5 Experimental Results . . . 200
7.5.1 Construction of the Training Database . . . 200
7.5.2 Results on Gray-Scale Images . . . 201
7.5.3 Results on Color Images . . . 204
7.6 Conclusions and Future Research Work . . . 207
7.6.1 Conclusions . . . 207
7.6.2 Future Research Work . . . 209
Bibliography . . . 210

8 Super Resolution for Multispectral Image Classification 217

Feng Li, Xiuping Jia, Donald Fraser, and Andrew Lambert
8.1 Introduction . . . 217
8.2 Methodology . . . 220
8.2.1 Background . . . 220
8.2.2 Super Resolution Based on a Universal Hidden Markov Tree Model 222
8.2.3 MAP-uHMT on Multispectral Images . . . 228
8.3 Experimental Results . . . 230
8.3.1 Testing with MODIS data . . . 230
8.3.2 Testing with ETM+ data . . . 238
8.4 Conclusion . . . 245
Bibliography . . . 246

9 Color Image Restoration Using Vector Filtering Operators 249
Rastislav Lukac
9.1 Introduction . . . 249
9.2 Color Imaging Basics . . . 250
9.2.1 Numeral Representation . . . 251
9.2.2 Image Formation . . . 252
9.2.3 Noise Modeling . . . 253
9.2.4 Distance and Similarity Measures . . . 256
9.3 Color Space Conversions . . . 258
9.3.1 Standardized Representations . . . 258
9.3.2 Luminance–Chrominance Representations . . . 259
9.3.3 Cylindrical Representations . . . 260
9.3.4 Perceptual Representations . . . 262
9.4 Color Image Filtering . . . 262
9.4.1 Order-Statistic Methods . . . 263
9.4.2 Combination Methods . . . 270
9.5 Color Image Quality Evaluation . . . 274
9.5.1 Subjective Assessment . . . 274
9.5.2 Objective Assessment . . . 275
9.6 Conclusion . . . 277
Bibliography . . . 277

10 Document Image Restoration and Analysis as Separation of Mixtures of Patterns: From Linear to Nonlinear Models 285
Anna Tonazzini, Ivan Gerace, and Francesca Martinelli
10.1 Introduction . . . 285
10.1.1 Related Work . . . 286
10.1.2 Blind Source Separation Approach . . . 287
10.1.3 Chapter Outline . . . 288
10.2 Linear Instantaneous Data Model . . . 289

10.2.1 Single-Side Document Case 289
10.2.2 Recto–Verso Document Case 290
10.2.3 Solution through Independent Component Analysis 291
10.2.4 Solution through Data Decorrelation 292
10.2.5 Discussion of the Experimental Results 293
10.3 Linear Convolutional Data Model 296
10.3.1 Solution through Regularization 299
10.3.2 Discussion of the Experimental Results 301
10.4 Nonlinear Convolutional Data Model for the Recto–Verso Case 302
10.4.1 Solution through Regularization 304
10.4.2 Discussion of the Experimental Results 305
10.5 Conclusions and Future Prospects 305
Bibliography 307

11 Correction of Spatially Varying Image and Video Motion Blur Using a Hybrid Camera **311**
Yu-Wing Tai and Michael S. Brown
11.1 Introduction 311
11.2 Related Work 313
11.2.1 Traditional Deblurring 313
11.2.2 PSF Estimation and Priors 313
11.2.3 Super Resolution and Upsampling 314
11.3 Hybrid Camera System 315
11.3.1 Camera Construction 316
11.3.2 Blur Kernel Approximation Using Optical Flows 317
11.3.3 Back-Projection Constraints 318
11.4 Optimization Framework 319
11.4.1 Richardson–Lucy Image Deconvolution 319
11.4.2 Optimization for Global Kernels 320
11.4.3 Spatially Varying Kernels 321
11.4.4 Discussion 324
11.5 Deblurring of Moving Objects 325
11.6 Temporal Upsampling 326
11.7 Results and Comparisons 328
11.8 Conclusion 335
Bibliography 336
