In the above mentioned article by Ponce-Alonso et al¹, the wrong figure file was used for Figure 1 in the final published version of record. The correct Figure 1 appears below. The publisher apologizes for the error.

Fig. 1. Evolution of *C. difficile* infection (CDI) over time, from control period (left) to COVID-19 period (right). The bar chart shows the total CDI case count, grouped by epidemiological definition. The solid line represents total hospital stays during each period (in days), which were used to calculate the incidence density of nosocomial CDI cases (dashed line). Note. HO-HCFA CDI, hospital-onset healthcare facility-associated *C. difficile* infection; CO-HCFA CDI, community-onset healthcare facility-associated *C. difficile* infection; ID CDI, indeterminate-onset *C. difficile* infection; CA CDI, community-acquired *C. difficile* infection; rCDI, recurrent *C. difficile* infection; HCFA CDI (ID), incidence density of healthcare facility-associated *C. difficile* infection.
