# Implementing Models in Quantitative Finance: Methods and Cases

# Contents

<b>Introduction</b>	<b>xv</b>
<b>Part I Methods</b>	
<b>1 Static Monte Carlo</b>	<b>3</b>
1.1 Motivation and Issues	3
1.1.1 Issue 1: Monte Carlo Estimation	5
1.1.2 Issue 2: Efficiency and Sample Size	7
1.1.3 Issue 3: How to Simulate Samples	8
1.1.4 Issue 4: How to Evaluate Financial Derivatives	9
1.1.5 The Monte Carlo Simulation Algorithm	11
1.2 Simulation of Random Variables	11
1.2.1 Uniform Numbers Generation	12
1.2.2 Transformation Methods	14
1.2.3 Acceptance-Rejection Methods	20
1.2.4 Hazard Rate Function Method	23
1.2.5 Special Methods	24
1.3 Variance Reduction	31
1.3.1 Antithetic Variables	31
1.3.2 Control Variables	33
1.3.3 Importance Sampling	35
1.4 Comments	39
<b>2 Dynamic Monte Carlo</b>	<b>41</b>
2.1 Main Issues	41
2.2 Continuous Diffusions	45
2.2.1 Method I: Exact Transition	45
2.2.2 Method II: Exact Solution	46
2.2.3 Method III: Approximate Dynamics	46

2.2.4	Example: Option Valuation under Alternative Simulation Schemes	48
2.3	Jump Processes	49
2.3.1	Compound Jump Processes	49
2.3.2	Modelling via Jump Intensity	51
2.3.3	Simulation with Constant Intensity	53
2.3.4	Simulation with Deterministic Intensity	54
2.4	Mixed-Jump Diffusions	56
2.4.1	Statement of the Problem	56
2.4.2	Method I: Transition Probability	58
2.4.3	Method II: Exact Solution	58
2.4.4	Method III.A: Approximate Dynamics with Deterministic Intensity	59
2.4.5	Method III.B: Approximate Dynamics with Random Intensity	60
2.5	Gaussian Processes	62
2.6	Comments	66
<b>3</b>	<b>Dynamic Programming for Stochastic Optimization</b>	<b>69</b>
3.1	Controlled Dynamical Systems	69
3.2	The Optimal Control Problem	71
3.3	The Bellman Principle of Optimality	73
3.4	Dynamic Programming	74
3.5	Stochastic Dynamic Programming	76
3.6	Applications	77
3.6.1	American Option Pricing	77
3.6.2	Optimal Investment Problem	79
3.7	Comments	81
<b>4</b>	<b>Finite Difference Methods</b>	<b>83</b>
4.1	Introduction	83
4.1.1	Security Pricing and Partial Differential Equations	83
4.1.2	Classification of PDEs	84
4.2	From Black-Scholes to the Heat Equation	87
4.2.1	Changing the Time Origin	88
4.2.2	Undiscounted Prices	88
4.2.3	From Prices to Returns	89
4.2.4	Heat Equation	89
4.2.5	Extending Transformations to Other Processes	90
4.3	Discretization Setting	91
4.3.1	Finite-Difference Approximations	91
4.3.2	Grid	93
4.3.3	Explicit Scheme	94
4.3.4	Implicit Scheme	101
4.3.5	Crank-Nicolson Scheme	103
4.3.6	Computing the Greeks	109

4.4	Consistency, Convergence and Stability	110
4.5	General Linear Parabolic PDEs	115
4.5.1	Explicit Scheme	116
4.5.2	Implicit Scheme	117
4.5.3	Crank-Nicolson Scheme	118
4.6	A VBA Code for Solving General Linear Parabolic PDEs	119
4.7	Comments	119
<b>5</b>	<b>Numerical Solution of Linear Systems</b>	<b>121</b>
5.1	Direct Methods: The LU Decomposition	122
5.2	Iterative Methods	127
5.2.1	Jacobi Iteration: Simultaneous Displacements	128
5.2.2	Gauss-Seidel Iteration (Successive Displacements)	130
5.2.3	SOR (Successive Over-Relaxation Method)	131
5.2.4	Conjugate Gradient Method (CGM)	133
5.2.5	Convergence of Iterative Methods	135
5.3	Code for the Solution of Linear Systems	140
5.3.1	VBA Code	140
5.3.2	MATLAB Code	141
5.4	Illustrative Examples	143
5.4.1	Pricing a Plain Vanilla Call in the Black-Scholes Model (VBA)	144
5.4.2	Pricing a Plain Vanilla Call in the Square-Root Model (VBA)	145
5.4.3	Pricing American Options with the CN Scheme (VBA) ....	147
5.4.4	Pricing a Double Barrier Call in the BS Model (MATLAB and VBA)	149
5.4.5	Pricing an Option on a Coupon Bond in the Cox-Ingersoll-Ross Model (MATLAB)	152
5.5	Comments	155
<b>6</b>	<b>Quadrature Methods</b>	<b>157</b>
6.1	Quadrature Rules	158
6.2	Newton-Cotes Formulae	159
6.2.1	Composite Newton-Cotes Formula	162
6.3	Gaussian Quadrature Formulae	173
6.4	Matlab Code	180
6.4.1	Trapezoidal Rule	180
6.4.2	Simpson Rule	180
6.4.3	Romberg Extrapolation	181
6.5	VBA Code	181
6.6	Adaptive Quadrature	182
6.7	Examples	185
6.7.1	Vanilla Options in the Black-Scholes Model	186
6.7.2	Vanilla Options in the Square-Root Model	188
6.7.3	Bond Options in the Cox-Ingersoll-Ross Model	190

6.7.4	Discretely Monitored Barrier Options	193
6.8	Pricing Using Characteristic Functions	197
6.8.1	MATLAB and VBA Algorithms	202
6.8.2	Options Pricing with Levy Processes	206
6.9	Comments	211
<b>7</b>	<b>The Laplace Transform</b>	<b>213</b>
7.1	Definition and Properties	213
7.2	Numerical Inversion	216
7.3	The Fourier Series Method	218
7.4	Applications to Quantitative Finance	219
7.4.1	Example	219
7.4.2	Example	225
7.5	Comments	228
<b>8</b>	<b>Structuring Dependence using Copula Functions</b>	<b>231</b>
8.1	Copula Functions	231
8.2	Concordance and Dependence	233
8.2.1	Frechet-Hoeffding Bounds	233
8.2.2	Measures of Concordance	234
8.2.3	Measures of Dependence	235
8.2.4	Comparison with the Linear Correlation	236
8.2.5	Other Notions of Dependence	238
8.3	Elliptical Copula Functions	240
8.4	Archimedean Copulas	245
8.5	Statistical Inference for Copulas	251
8.5.1	Exact Maximum Likelihood	253
8.5.2	Inference Functions for Margins	254
8.5.3	Kernel-based Nonparametric Estimation	255
8.6	Monte Carlo Simulation	257
8.6.1	Distributional Method	257
8.6.2	Conditional Sampling	259
8.6.3	Compound Copula Simulation	263
8.7	Comments	265

## Part II Problems

<b>Portfolio Management and Trading</b>	<b>271</b>	
<b>9</b>	<b>Portfolio Selection: "Optimizing" an Error</b>	<b>273</b>
9.1	Problem Statement	274
9.2	Model and Solution Methodology	276
9.3	Implementation and Algorithm	278
9.4	Results and Comments	280
9.4.1	In-sample Analysis	281

9.4.2 Out-of-sample Simulation	285
<b>10 Alpha, Beta and Beyond</b>	289
10.1 Problem Statement	290
10.2 Solution Methodology	291
10.2.1 Constant Beta: OLS Estimation	292
10.2.2 Constant Beta: Robust Estimation	293
10.2.3 Constant Beta: Shrinkage Estimation	295
10.2.4 Constant Beta: Bayesian Estimation	296
10.2.5 Time-Varying Beta: Exponential Smoothing	299
10.2.6 Time-Varying Beta: The Kalman Filter	300
10.2.7 Comparing the models	304
10.3 Implementation and Algorithm	306
10.4 Results and Comments	309
<b>11 Automatic Trading: Winning or Losing in a kBit</b>	311
11.1 Problem Statement	312
11.2 Model and Solution Methodology	314
11.2.1 Measuring Trading System Performance	314
11.2.2 Statistical Testing	315
11.3 Code	317
11.4 Results and Comments	322
<b>Vanilla Options</b>	329
<b>12 Estimating the Risk-Neutral Density</b>	331
12.1 Problem Statement	332
12.2 Solution Methodology	332
12.3 Implementation and Algorithm	335
12.4 Results and Comments	338
<b>13 An "American" Monte Carlo</b>	345
13.1 Problem Statement	346
13.2 Model and Solution Methodology	347
13.3 Implementation and Algorithm	348
13.4 Results and Comments	349
<b>14 Fixing Volatile Volatility</b>	353
14.1 Problem Statement	354
14.2 Model and Solution Methodology	356
14.2.1 Analytical Transforms	356
14.2.2 Model Calibration	358
14.3 Implementation and Algorithm	360
14.3.1 Code Description	361
14.4 Results and Comments	362

<b>Exotic Derivatives</b>	<b>371</b>
<b>15 An Average Problem</b>	<b>373</b>
15.1 Problem Statement	374
15.2 Model and Solution Methodology	374
15.2.1 Moment Matching	375
15.2.2 Upper and Lower Price Bounds	378
15.2.3 Numerical Solution of the Pricing PDE	379
15.2.4 Transform Approach	382
15.3 Implementation and Algorithm	386
15.4 Results and Comments	390
<b>16 Quasi-Monte Carlo: An Asian Bet</b>	<b>395</b>
16.1 Problem Statement	396
16.2 Solution Metodology	398
16.2.1 Stratification and Latin Hypercube Sampling	399
16.2.2 Low Discrepancy Sequences	401
16.2.3 Digital Nets	402
16.2.4 The Sobol' Sequence	403
16.2.5 Scrambling Techniques	404
16.3 Implementation and Algorithm	406
16.4 Results and Comments	407
<b>17 Lookback Options: A Discrete Problem</b>	<b>411</b>
17.1 Problem Statement	412
17.2 Model and Solution Methodology	414
17.2.1 Analytical Approach	414
17.2.2 Finite Difference Method	417
17.2.3 Monte Carlo Simulation	419
17.2.4 Continuous Monitoring Formula	419
17.3 Implementation and Algorithm	420
17.4 Results and Comments	421
<b>18 Electrifying the Price of Power</b>	<b>427</b>
18.1 Problem Statement	429
18.1.1 The Demand Side	429
18.1.2 The Bid Side	429
18.1.3 The Bid Cost Function	430
18.1.4 The Bid Strategy	432
18.1.5 A Multi-Period Extension	433
18.2 Solution Methodology	433
18.3 Implementation and Experimental Results	435
<b>19 A Sparkling Option</b>	<b>441</b>
19.1 Problem Statement	441
19.2 Model and Solution Methodology	444

19.3 Implementation and Algorithm	450
19.4 Results and Comments	453
<b>20 Swinging on a Tree</b>	<b>457</b>
20.1 Problem Statement	458
20.2 Model and Solution Methodology	460
20.3 Implementation and Algorithm	461
20.3.1 Gas Price Tree	461
20.3.2 Backward Recursion	463
20.3.3 Code	464
20.4 Results and Comments	464
<b>Interest-Rate and Credit Derivatives</b>	<b>469</b>
<b>21 Floating Mortgages</b>	<b>471</b>
21.1 Problem Statement and Solution Method	473
21.1.1 Fixed-Rate Mortgage	473
21.1.2 Flexible-Rate Mortgage	474
21.2 Implementation and Algorithm	476
21.2.1 Markov Control Policies	476
21.2.2 Dynamic Programming Algorithm	477
21.2.3 Transaction Costs	480
21.2.4 Code	480
21.3 Results and Comments	482
<b>22 Basket Default Swaps</b>	<b>487</b>
22.1 Problem Statement	487
22.2 Models and Solution Methodologies	489
22.2.1 Pricing nth-to-default Homogeneous Basket Swaps	489
22.2.2 Modelling Default Times	490
22.2.3 Monte Carlo Method	491
22.2.4 A One-Factor Gaussian Model	491
22.2.5 Convolutions, Characteristic Functions and Fourier Transforms	493
22.2.6 The Hull and White Recursion	495
22.3 Implementation and Algorithm	495
22.3.1 Monte Carlo Method	496
22.3.2 Fast Fourier Transform	496
22.3.3 Hull-White Recursion	497
22.3.4 Code	497
22.4 Results and Comments	497
<b>23 Scenario Simulation Using Principal Components</b>	<b>505</b>
23.1 Problem Statement and Solution Methodology	506
23.2 Implementation and Algorithm	508
23.2.1 Principal Components Analysis	508

23.2.2	Code	511
23.3	Results and Comments	511
<b>Financial Econometrics</b>		<b>515</b>
<b>24</b>	<b>Parametric Estimation of Jump-Diffusions</b>	<b>519</b>
24.1	Problem Statement	520
24.2	Solution Methodology	520
24.3	Implementation and Algorithm	522
24.3.1	The Continuous Square-Root Model	523
24.3.2	The Mixed-Jump Square-Root Model	525
24.4	Results and Comments	528
24.4.1	Estimating a Continuous Square-Root Model	528
24.4.2	Estimating a Mixed-Jump Square-Root Model	530
<b>25</b>	<b>Nonparametric Estimation of Jump-Diffusions</b>	<b>531</b>
25.1	Problem Statement	532
25.2	Solution Methodology	533
25.3	Implementation and Algorithm	535
25.4	Results and Comments	537
<b>26</b>	<b>A Smiling GARCH</b>	<b>543</b>
26.1	Problem Statement	543
26.2	Model and Solution Methodology	545
26.3	Implementation and Algorithm	547
26.3.1	Code Description	551
26.4	Results and Comments	554
<b>A</b>	<b>Appendix: Proof of the Thinning Algorithm</b>	<b>557</b>
<b>B</b>	<b>Appendix: Sample Problems for Monte Carlo</b>	<b>559</b>
<b>C</b>	<b>Appendix: The Matlab Solver</b>	<b>563</b>
<b>D</b>	<b>Appendix: Optimal Control</b>	<b>569</b>
D.1	Setting up the Optimal Stopping Problem	569
D.2	Proof of the Bellman Principle of Optimality	570
D.3	Proof of the Dynamic Programming Algorithm	570
