Preface		xiii
Chapter 1	Properties of InP and Related Materials—V. Swaminathan	1
1.1	Introduction	1
1.2	Bonding and Crystal Structure	1
1.3	Energy Band Structure	3
1.4	Energy Band Structure of Alloys	4
1.5	Heterojunctions	5
1.6	Alloy Semiconductors	8
1.7	Material Parameters of Alloy Semiconductors	10
1.7.1	Lattice Properties	10
1.7.2	Band Structure	12
1.7.3	Effective Mass	22
1.7.4	Elastic Properties	26
1.7.5	Optical Properties	31
1.7.6	Thermal Resistivity	37
1.7.7	Thermal Expansion Coefficient	39
1.8	Summary	41
Chapter 2	SIMS Analysis of InP and Related Materials—M. Geva	45
2.1	Introduction	45
2.2	Fundamentals of Secondary Ion Mass Spectrometry	47
2.2.1	Description of Technique	47
2.2.2	The SIMS Hardware	48
2.2.3	The SIMS Process	51
2.2.4	Static and Dynamic SIMS	57
2.2.5	SIMS Modes of Operation	58
2.3	Features of SIMS Analysis	59
2.3.1	Sensitivity	59
2.3.2	Detection Limit	60
2.3.3	Dynamic Range	60
2.3.4	Depth Resolution	61

2.3.5	Spatial Resolution	62
2.3.6	Mass Resolution	62
2.4	SIMS Applications to InP and Other III-V Structures	65
2.4.1	Surface Contamination Analysis	65
2.4.2	Bulk Impurity Analysis	66
2.4.3	Layered Structures	67
2.4.4	High Depth Resolution Depth Profiling	68
2.4.5	Imaging Depth Profile	69
2.4.6	Metal-Semiconductor Interface	70
Chapter 3	Deep Levels in InP and Related Materials—W.A. Anderson and K.L. Jiao	75
3.1	Introduction	75
3.2	Theory of Deep-Level Transient Spectroscopy and Variations of the Basic Technique	76
3.2.1	Indirect Generation-Recombination Statistics	76
3.2.2	Capacitance Transient Measurements	78
3.2.3	DLTS Theory	80
3.2.4	Variation from the Basic Technique	81
3.3	Early Work on Deep Levels in InP	82
3.4	More Recent Work on Deep Levels in InP and Related Materials	86
3.5	Radiation Effects in InP	91
3.6	Discussion	96
Chapter 4	Low-Pressure MOVPE of InP-Based Compound Semiconductors—D. Schmitz	103
4.1	Introduction	103
4.2	The Low-Pressure MOVPE Process	105
4.2.1	Basic Considerations on the MOVPE Process	105
4.2.2	Model of Diffusion-Controlled Deposition by MOVPE	107
4.2.3	Process Precursors	108
4.3	Equipment Design	110
4.3.1	Design of the Gas Blending System	110
4.3.2	Design of the Reaction Chamber	112
4.3.3	Substrate Rotation Technique	114
4.3.4	Electronic Safety and Control System	117
4.3.5	Exhaust Gas Treatment	117
4.4	Experimental Results and Discussion	117
4.4.1	Substrates and Preparation	118
4.4.2	Basic Process Parameters	119
4.4.3	Growth of InP-Based Materials	119

4.5	Doping of InP-Based Materials in Low-Pressure MOVPE	133
4.6	Application of Low-Pressure MOVPE for Device Structures	139
4.6.1	Regrowth and Localized Growth of InP and GaInAs	140
4.6.2	Photodiodes	141
4.6.3	MISFET Device Structures	142
4.6.4	GaInAsP Waveguides	142
4.6.5	Quantum Well Structures Grown by Low-Pressure MOVPE	144
4.6.6	Strained Layer Device Structures	147
4.6.7	Visible Laser Devices	149
4.7	Conclusion and Future Investigations	150
Chapter 5	Doping of InP as Grown by Metalorganic Chemical Vapor Deposition—E.K. Byrne	155
5.1	Introduction	155
5.2	Shallow Donors	156
5.2.1	Device Applications	156
5.2.2	Minimizing Background Doping	156
5.2.3	Silicon	157
5.2.4	Tin	159
5.2.5	Sulfur	159
5.2.6	Selenium	160
5.2.7	Tellurium	160
5.3	Shallow Acceptors	161
5.3.1	Device Applications	161
5.3.2	Zinc	162
5.3.3	Cadmium	166
5.3.4	Magnesium	168
5.4	Deep Donors and Acceptors	169
5.4.1	Device Applications	169
5.4.2	Iron	169
5.4.3	Other Transition Elements	171
5.5	Rare Earth Ions	172
5.5.1	Device Applications	172
5.5.2	Ytterbium	172
5.5.3	Erbium	173
5.6	Summary	174
Chapter 6	Growth of InP and Related Compounds by GSMBE and MOMBE—C.R. Abernathy	177
6.1	Introduction	177
6.2	Equipment Design	178

6.2.1	GSMBE	178
6.2.2	MOMBE	182
6.3	Growth Kinetics	187
6.3.1	GSMBE	187
6.3.2	MOMBE	188
6.4	Material Quality	194
6.4.1	GSMBE	194
6.4.2	MOMBE	194
6.5	Doping	199
6.5.1	Elemental Sources: GSMBE	199
6.5.2	Elemental Sources: MOMBE	202
6.5.3	Gaseous Sources: MOMBE	203
6.6	Devices	206
6.6.1	GSMBE	206
6.6.2	MOMBE	206
Chapter 7	Ion Beam Processing of InP and Related Materials —S.J. Pearton and U.K. Chakrabarti	211
7.1	Introduction	211
7.2	Ion Implantation for Doping	212
7.2.1	InP	212
7.2.2	InGaAs	216
7.2.3	AlInAs	218
7.2.4	InGaAsP	218
7.2.5	InSb	218
7.2.6	InAs	220
7.3	Ion Implantation for Isolation	222
7.3.1	InP	223
7.3.2	InGaAs	227
7.3.3	AlInAs	231
7.3.4	InGaAsP	234
7.3.5	InSb	235
7.3.6	InAs	235
7.3.7	Thermally Stable Isolation Schemes	235
7.4	Rapid Thermal Annealing	239
7.5	Dry Etching	243
7.5.1	Ion Milling	243
7.5.2	Plasma Etching Techniques and Chemistries	250
7.5.3	Electron Cyclotron Resonance Plasma Etching	261
Chapter 8	Dry Etching of In-Based Semiconductors—T.R. Hayes	277
8.1	Introduction	277
8.2	Overview of Etch Techniques	279

8.3	Etch Chemistries and Mechanisms	281
8.3.1	Halogen-Based Chemistries	281
8.3.2	Hydrocarbon-Based Chemistries	285
8.3.3	Halogen and Hydrocarbon Mixtures	288
8.4	Etch-Induced Damage	289
8.5	Etch Diagnostics	293
8.6	Epitaxial Growth on Dry-Etched Surfaces	295
8.7	Applications	296
8.7.1	Gratings for Distributed Feedback Lasers	296
8.7.2	Active Channels and Mesas	297
8.7.3	Mirrors and Facets	299
8.8	Summary	301
Chapter 9	Ohmic Contacts to InP and Related Materials—A. Katz	307
9.1	Introduction	307
9.2	Fundamentals of Metal/InP Ohmic Contacts	310
9.2.1	Interfacial Reactions	310
9.2.2	Electrical Properties	313
9.2.3	Correlation Between Ohmic Contact Microstructure and Electrical Properties	315
9.2.4	Intrinsic Thermal and Mechanical Stresses	319
9.3	Elemental Metal-InP Contacts	321
9.3.1	Au-Based Contacts	321
9.3.2	Near-Noble Transition Metal-Based Contacts	324
9.3.3	Refractory Metal-Based (W, W-Alloys) Contacts	327
9.4	Conclusions, Summary, and Future Directions	328
Chapter 10	Issues for Dielectric Technology for InP MISFETs—U.K. Chakrabarti	337
10.1	Introduction	337
10.2	InP MISFET	338
10.3	Dielectric Technology for InP MISFET	339
10.3.1	Requirements of the Dielectric	339
10.3.2	Requirements of Dielectric Deposition Technology	340
Chapter 11	InGaAsP Quantum Well Lasers—N.K. Dutta	351
11.1	Introduction	351
11.2	Energy Levels	352
11.3	Gain and Recombination	355
11.3.1	Density of States	356
11.3.2	Gain and Radiative Recombination	357
11.3.3	Nonradiative Recombination	358
11.4	Single QW and MQW Lasers	359

11.5	Laser Structures	361
11.5.1	Broad-Area Lasers	362
11.5.2	Index-Guided Lasers	363
11.5.3	Low-Threshold Lasers	366
11.6	Single-Frequency Lasers	367
11.6.1	DFB Lasers	367
11.6.2	DBR Lasers	371
11.7	Strained QW Lasers	373
11.7.1	InGaAs Strained QW Lasers	373
11.7.2	Dynamic Characteristics	375
Chapter 12	Heterostructure Bipolar Transistors—B. Jalali and R.N. Nottenburg	379
12.1	Introduction	379
12.2	Basic Device Concepts	379
12.3	Available Heterostructure Systems	381
12.4	Current Voltage Characteristics	383
12.5	Base Transport	386
12.6	Collector Transport and High-Frequency Characteristics	388
12.7	High Doping Limit in the Base	395
12.8	Integrated Circuits	396
12.9	Summary	403
Chapter 13	Optimization and Fabrication of Metal Contacts for Photovoltaic Solar Cells—T.A. Gessert and T.J. Coutts	407
13.1	Introduction	407
13.2	The Physics of Solar Cell Grid Modeling	410
13.2.1	Photovoltaic Solar Cell Equations	410
13.2.2	Top Contact Grid Modeling Equations	411
13.2.3	Concentrator Solar Cells	414
13.3	Solar Cell Metallization and Modeling Studies	415
13.3.1	Contact Resistance of the Back and Front Contact	416
13.3.2	Grid Metal Resistivity	420
13.3.3	Grid Metal Linewidth Considerations	426
13.3.4	Adhesion, Intermetallic Stress, and Diffusion of the Grid Line	431
13.3.5	Photolithographic Considerations	432
13.4	Future Trends and Conclusions	435
13.4.1	Mechanically Stacked, Four-Terminal, Two-Junction Solar Cell Metallization	436
13.4.2	Monolithic, Three-Terminal, Two-Junction Solar Cell Metallization	436
13.4.3	Conclusions	437
