Executive summary

The cassava mosaic disease (CMD) project activities on the field in the 12 states covered by the project were monitored from 22 to 28 February 2004. Three teams each visited fields in four states. In each state, the team was guided by CMD partners with local knowledge of the field activities assisted by an IITA member of staff.

Team composition and states monitored

Mr G. Adejare (NPQS) Team Leader, Dr J.K.U. Emehute (NRCRI), Mr N.C. Okaro (USAID), and Dr F. Ogbe (IITA) covered Abia, Anambra Ebonyi, and Enugu states.

Mr A. Babalola (FDA) Team Leader, Mr A.D. Nale (Shell Petroleum), Mr B.O. Ojarikre (NDDC), and Mr P. Ilona (IITA) covered Akwa Ibom, Cross River, Imo, and Rivers states.

Dr A.A. Adeniji (RTEP) Team Leader, Chief Tola Adepomola (CGAN), Mr Amadi (NDDC), Mr O. Koyaolu-Salami (NPQS), Rev. J.O. Adeleye (RTEP), and Mr Gbenga Akinwale (IITA) covered Bayelsa, Delta, Edo, and Ondo states.

Delivered outputs

- Photographs of fields visited
- Videotapes of team on the tour
- Documentary reports by teams

Results and outcomes

In all, the fields were planted, are being maintained, and the CMD-resistant genotypes are generally growing well.

Variations in the level of execution were noticed among the states due largely to logistics at local level. Improvement is needed in the areas of promptness of fund release, inputs, fertilizer, farm protection against rodents and goats/cattle as well as the high cost and scarcity of labor.

Farmers are eager to see the best performing varieties among the sets being tested, even though farmers have started to identify their preharvest preferences among the candidate cassava genotypes.

One team sums their observations thus: a lot has been put into the project and credit should be given to the executing agencies.

Key suggestions from the teams on the field trials include:

- Plant trial plots early as farmers do in their locations.
- Label plots clearly for publicity and sensitization.
- Most soils on land made available by farmers are poor in fertility?
- Control termites to improve plant stands.

Table 1. A total of 152 field plots, randomly selected by the teams, were visited.

State	On-farm trials	Community demonstration	Multiplication plots	Multilocational trials
Abia	8	1	1 = 1.2 ha	1
Anambra	10	3	1 = 2.0 ha	–
Ebonyi	6	2	1 = 3.3 ha	1
Enugu	6	1	1 = 1.15 ha	1
Rivers	–	–	2 = 1.0 ha	1
Imo	5	1	3 = ?	1
Akwa Ibom	9	2	2 = ?	1
Cross River	24	2	2 = ?	1
Ondo	8	3	1 = 3.0 ha	–
Edo	8	3	1 = 1.5 ha	1
Delta	10	3	1 = 0.7 ha	1
Bayelsa	8	3	1 = 0.6 ha	–
Total visited	102	24	17 = 34.45 ha	9
Total established	1320	108	93 ha	19

– = not visited; ? = not specified in the team's report.

- Encourage farmers to keep records of field activities.
- Inform farmers about the aims of the project.
- Identify farmer sites early before 2005 planting season.

Conclusion

The monitoring team has provided us with a record of the progress made in the field by the project planting since May 2003. All 12 states are participating and their fields have the CMD genotypes at four levels (on-farm tests, demonstrations, multilocational trials, and multiplication). All logistics and gaps have been identified for all partners to note for remedial action. We thank all who participated and facilitated in the tours.

Monitoring tour of preemptive management of cassava mosaic disease field activities in Nigeria

Introduction

In the 2003 planting season, the following activities were planned and executed:

- Multilocational trials to identify specific and broadly adapted CMD-resistant genotypes with desired enduser' characteristics.
- On-farm trials in collaboration with farmers to identify CMD-resistant genotypes that are adapted to farmer's agronomic and cultural practices and with high economic returns in terms of high root yields and root quality characteristics.
- Community-based demonstration plots for identification of new varieties and production technologies through farmers' field day activities.
- Multiplication of CMD-resistant genotypes to increase planting materials for expanded on-farm trials, demonstration plots, and for large-scale distribution of healthy planting materials to farmers from 2004.
- Germplasm development.

Multilocational trials

Forty-three genotypes, comprising 40 newly selected CMD-resistant genotypes and three other improved checks commonly grown by farmers in Nigeria have been planted at 17 locations to identify specific and broadly adapted CMD-resistant genotypes with desired enduser' characteristics (Table 1).

Demonstration plots

Thirty-six CMD-resistant genotypes including checks were planted in 92 community-based demonstration plots in 11 states for identification of new varieties and production technologies (Table 2).

On-farm trials

Thirty-three CMD-resistant genotypes were planted in 1210 on-farm trials in 110 communities in 12 states to identify CMD-resistant genotypes that are adapted to farmer's agronomic and cultural practices and with high economic returns in terms of high root yields and root quality characteristics (Table 3).

Note: Additional multiplication is ongoing at IITA Onne and Ibadan stations and with the Niger Delta Development Commission (NDDC).

Monitoring Teams' Reports

Team 1

Rivers, Imo, Akwa Ibom, and Cross River states

Summary

Monitoring team 1 comprising Messers A. Babalola (FDA), A.D. Nale (SPDC), B.O. Ojarikre (NDDC), and P.C. Ilona (IITA) visited project activities in four states of Rivers, Imo, Akwa Ibom, and Cross River. In each of the four states except Rivers, officials of the state ADP and the Ministry of Agriculture guided the team. Among the states visited, only Akwa Ibom has paid its counterpart funding of US\$0.6 million to the project. While commending Akwa Ibom, the team used the opportunity to appeal to the other states to fulfill their financial obligation for the success of the project.

The team visited 56 trials as shown in Table 5. There is evidence to certify that the various executing agencies including research institutes, universities, oil companies, and the private sector planted and managed their respective cassava trials, and multiplication to increase planting materials of the new CMD-resistant genotypes. Some field and logistic constraints were identified and solutions were suggested.

Report by state

Rivers State

On the team's arrival to the state, the first point of call was the ADP Program Manager's office. He welcomed the team informally since according to him there had been no directive on the visit from the state's Commissioner of Agriculture. The team observed that there was a communication gap between the Commissioner and the ADP on one hand and the project on the other, which needed to be resolved for the project to be successfully implemented. In view of the above, it was not possible for the team to visit the various agronomic activities in the state that are managed by the ADP including on-farm trials and demonstration and multiplication plots. However, activities by research institutes and universities in the state were monitored.

Multiplication. At the Rivers State University of Science and Technology, 19 of the CMD-resistant genotypes were multiplied on 1.0 ha. The field was good and the work done was commendable. The plots were clean and neatly laid out. Three of the genotypes showed mild symptoms of CMD. A small fraction of the field had soil fertility problems and was prone to drought due to its sandy nature. The plants were only four months old yet, many of them had cracked the soil around their base indicating early bulking. Farmers were highly fascinated about this. Agricultural students in the university will find this field very useful not only as a multiplication plot for new cassava varieties but as an incentive

to make a career in cassava production. Issues ranging from soil fertility problems, erosion management, and fertilizer use were discussed. It is imperative to note that farmers are not interested in the new varieties alone, they need a complete production package, as is now the case with rice.

At the IITA Onne Station, the team saw over 20 ha of multiplication plot representing 20% of the total land area for multiplication in 2003/2004 of the 40 CMD-resistant genotypes. The fields were properly laid out, labelled, and maintained and served as models for farmers, ADPs, and NGOs. Farmers and collaborators were expecting planting materials to be made available to them for expanded on-farm trials and multiplication in the current season.

Multilocational trial. The team saw the three sets of uniform yield trials at Onne consisting of 40 new CMD-resistant genotypes and their three checks. The genotypes in the trials have been scored for resistance to CMD and to other major pests and diseases. Three of the genotypes were apparently susceptible to a higher pressure of CMD or a new variant of the virus. Despite the situation, several genotypes have kept their resistance intact.

Imo State

The team was received by Engr. Akalonu who stood in for the Program Manager of the state ADP. The team later paid a courtesy call to the Permanent Secretary in the state Ministry of Agriculture. The team leader, Mr Babalola, explained the objectives of the visit and highlighted the expected gains to the state. He expressed concern that the state is yet to fulfill its obligation of US\$0.6 million to the project and solicited for the payment without further delay. The Permanent Secretary reassured the team of the state's readiness to commit both human and financial resources for the success of the project.

On-farm trials. The team visited five randomly selected on-farm trials. The visit as well as oral interview of farmers and extension officers, confirm that all the planned trials were planted. The fields were clean and at least 80% of the expected plant density was growing in each plot. CMD symptoms were observed on some genotypes especially 96/6012, 92/0326, 30572, and the farmers local checks. *Cercospora* leaf spot and anthracnose were also observed on some of the genotypes. Environmental stress due to prolonged drought, high soil temperature, and sandiness caused some of the varieties to shed their leaves. High genetic variability for each of these constraints was observed and should provide a good basis for selection. Preharvest selection by farmers and extension agents in the fields visited favored 91/02324, 96/0166, 96/0505, and TME 419.

Demonstration. One randomly selected demonstration field was visited at the ADP Seed Farm, Oguta. Plant establishment was very good but some of the border plants were gutted by fire. Although the plants have recovered, it should be noted as a covariate during analysis and varietal selection by farmers.

Multiplication. Three multiplication sites were visited—Federal University of Technology, Owerri; Nigeria Starch Mill Farm, Egbema; and Shell Agricultural Resource and Training Center, Oguta. The three farms except the one at the University were well-managed. At Egbema, it was evident that the field had been abandoned to weeds. The farm technician

confirmed this observation and attributed it to internal rifts within the company, which had paralyzed activities for a while. At Oguta, frequent weeding was necessary due to the abundance of difficult-to-control weeds such as *Imperata cylindrica* and the *Cynodon* family. Maintaining the weeds had increased the cost of production above what had been budgeted for it. It was agreed that the project should bear some of this cost.

The multiplication plot at the university was not impressive. The field was weedy and the plants were stunted. Poor soil conditions, drought, and late planting affected the establishment of plants. Plants will recover as soon as soil moisture level improves.

Multilocational trial. The only multilocational trial in the state was planted at the Nigerian Starch Mill Farm, Egbema. In collaboration with the management of the company, suitable varieties for starch will be identified from the 40 genotypes in the trial. Such private sector generated information will be easier to adopt by investors in the starch sector. It will also guarantee contract growers that their produce will meet factory requirements and attract premium price.

Akwa Ibom State

The team arrived at the state ADP office and was received by the Director of Technical Services who led us to pay a courtesy visit to the Commissioner of Agriculture. The Commissioner represented by the Director of Finance and Planning welcomed the team. The team commended the state for being the first to pay in full the counterpart funding for the project. The Commissioner assured that the state is committed to the project and will ensure its success in the state.

On-farm trials. The team visited nine trials and confirmed that all the other trials were planted. The trials were properly laid out and maintained. Plant establishment was very good and should provide sufficient support for the 2004 activities. Farmers are very enthusiastic about the project and they are willing to show more commitment in subsequent activities. The team sees this as a big plus.

Demonstration. The demonstration fields were very good and the potentials of the new genotypes against the farmers' locals in terms of resistance and vigor were visible to the farmers themselves.

Multiplication. Two multiplication sites, one at the University of Uyo farm and the other at the ADP seed farm, were visited. At both locations, the fields were well-established and large quantities of planting materials would be made available for the 2004 activities.

Multilocational trial. One of the two multilocational trials of 40 CMD-resistant genotypes at the University of Uyo was visited. The coordinator of the trial, Dr Ekpe explained the field layout and the objectives of the trial. Scoring for major pests and diseases especially CMD is up to date.

Generally, the ADP and the University performed excellently in adherence to the work-plan. Some of the major constraints observed or mentioned included:

- Late site selection linked to late delivery of planting materials.
- Insufficient support to farmers on fertilizer acquisition and use.
- Severe damage by rodents and particularly goats.

As solutions, ADPs should start early to identify farmers and sites for the 2004 trials. The logistics to do this should also be provided early enough to ensure that trials are not isolated from farmers' fields. Existing information on fertilizer use should be made available to farmers in addition to linking them to supply sources. Rural friendly, pest control approaches such as sprinkling liquid fermented goat dung on plants to keep goats away should be exploited. Communities can also be assisted to develop local legislation against animal damage.

Some members of Team 1 at an on-farm trial in Akwa Ibom State.

COLLABORATION: M. D. EKE & DR. A. ANSA

Multilocal trial at the University of Uyo.

Cross River State

The Director of Technical Services received the team on behalf of the Program Manager of the state ADP. He also led the team to pay a courtesy visit to the Commissioner of Agriculture. The team intimated the Commissioner on the objectives of the visit and highlighted the benefits of the project to the state. The commissioner was pleased to know that so much activity had been going on in his state though payment had not been made. He promised to convey in more concrete terms the request for the payment of the state's counterpart funding to the Governor. Cassava, according to him, is one of the major crops targeted for commercialization in the state. He liked the idea of contiguous farming and indicated the state's readiness to commit large areas of land to it in various communities.

On-farm trials. The team visited 24 trials and confirmed that all other trials were planted. The trials were properly maintained and plant establishment was very good. However, the 11 trials per community, as agreed in the work plan, were planted at a single location by a group of farmers. The trial therefore looks like demonstration plot rather than on-farm trials. The need to capture soil variation and microenvironmental differences in each community was defeated. However, this was the case in only four of the 10 communities handling these trials. The Deputy Director of seed multiplication explained that the farmers wanted the trials on their communal lands and moreso that the logistic problems for monitoring, training, and input delivery were manageable for him at the time of planting considering NLC, fuel, and vehicle crisis that characterized the period. He was made to realize that whatever was worth doing ought to be done properly.

Demonstration. The demonstration fields managed by the Nigerian Cassava Growers Association and the ADP were very good. At the ADP site, one of the farmers argued with fellow farmers that no variety would perform better than 30572. He was later proved wrong when each plant of 96/0166 and 30572 were harvested—the former was 300% better than latter. The farmers continued the discussion as the team left for other fields.

Multiplication. The multiplication field (1.0 ha) at the ADP Seed Farm was visited. The field was well-established and plans were on to make large quantities of planting materials available for the 2004 planting season.

Multilocal trial. The three sets of uniform yield trials of 40 CMD-resistant genotypes at the University of Calabar were visited. Although CMD damage was very low, green mite damage was very severe on several genotypes at this location. The fact that green mite damage was not observed in all other sites visited calls for a study of this microenvironment. It could be a hot spot for screening mite resistance in the future.

Based on the sites visited and the discussions with farmers and extension agents, the team confirmed that the stipulated number of trials as agreed in the workplan were planted and maintained. The following were however noted:

- By farmers' standards and practices the trials was planted late.
- The land made available by farmers for the trials mostly nonfertile and rejected land.
- The varieties were not properly labeled.
- Fertilizer was either not provided or was in limited quantity.

- Disease identification was a problem for some extension officers particularly the farm manager at the University farm.
- Farmers were poorly informed about the objectives of the project.

Across the four states visited, it was evident that a lot has been put into the project and credit should be given to the executing agencies. In the first year of any project, there are bound to be logistic problems, which should be corrected, as the project progresses. The following general suggestions could help:

- Plant trials plots early in consonance with farmers' practices.
- Harvest existing trials early and make selections for the next season.
- Use standard clusters within a specified radius in a community for on-farm trials.
- Encourage more private sector participation.
- Develop production packages to go with the new varieties as for rice.
- Label fields properly with signboards for publicity and sensitization.
- Enlighten farmers on fertilizer use and sources as most soils are poor.
- Use termite control strategies to improve plant stand.
- Assist and encourage medium-scale farmers to keep records that could be used to generate information on weed frequency, fertilizer use, cost of production of roots, and stem etc.
- Train extension officers and organize farmers' field days.
- Integrate postharvest activities alongside production for better success.

Table 5. Summary of trials/activities visited per state by team 1.

State	On-farm	Demonstration	Multiplication	Multilocational
River	0	0	2	1
Imo	5	1	3	1
Akwa Ibom	9	2	2	1
Cross River	24	2	2	1

Team 2

Abia, Enugu, Ebonyi, and Anambra states

Summary

The monitoring team comprised Dr J.K.U. Emehute (NRCRI), Mr N.C. Okaro (USAID), Mr G. Adejare (NPQS), and Dr Francis Ogbe with Mr Adejare as the team leader. Four states of Abia, Enugu, Ebonyi, and Anambra were monitored from 23 to 27 February 2004. In each state, field monitoring was preceded by a courtesy call to the ADP Program Manager who then led the team to either the Permanent Secretary or the Commissioner of Agriculture.

All the ADP Program Managers and their staff showed an interest in the project and promised to contribute towards the commercialization of cassava in Nigeria. The team observed that there were logistic problems, which affected most of the ADPs at the beginning of the project. Farmers had already planted their fields in April/May while planting materials for this project arrived in June/July, so it was difficult to choose the right farmers and good soils for the trials. Furthermore, the distribution of planting materials to farmers and sites was prolonged due to nonavailability of vehicles for the ADP field staff to use. The period also coincided with the NLC strikes and fuel scarcity. Expectations could be much higher in subsequent years when the monitoring team will focus more on the number of CMD-resistant varieties adopted, diffused, and grown by farmers. Production technologies tested and adopted by farmers will increase food quantity and quality, income generation to households, level of commercialization and industrialization, job creation, and foreign exchange through exportation.

There is need to train or retrain ADP frontline officers on the expectations and standards for the project. Timely planning and information exchange are vital for the success of the project.

Report by states

Abia State

On-farm trials. Eight trials were visited. Generally, they were effectively planted and maintained by farmers. The varieties were properly labeled with conspicuous signposts. Soils were generally poor and needed fertilizer to boost varietal performance.

Cassava processing into food products was very active in the communities visited. Cassava stem supply has been commercialized at the farmers' level with a bundle costing between N200 and N300. The readiness of more farmers especially women cooperatives including Dibugwu Women Cooperative to participate in future trials is a strong indication of success.

Demonstration plot. There were 28 varieties in the field visited. The farmer and his group have carefully maintained the field with signboards put on each of the plots. The farmers have had previous experience in group working and have participated in other cassava-related projects. A few plants were attacked by cassava mealybug and deserve immediate attention.

Multiplication. The field (1.2 ha), belonging to a leading farmer, was well-managed in terms of planting, plant density, field maintenance, and labeling. The farmer was highly impressed with the performance of the varieties and has indicated his readiness to open up more land for the 2004/2005 activities. However, 91934 was susceptible to CBB and 92/0326 to lodging.

Multilocational trial. This was seen at the National Root Crops Research Institute (NRCRI), Umudike where 40 CMD-resistant genotypes and three checks were planted in three sets of uniform yield trial (UYT). The trials were properly maintained and labeled. Some of the genotypes showed symptoms of CMD, CGM, CM, and *Cercospora* leaf spot damage. Some other varieties particularly 96/0523 and 91/1632 maintained high leaf greenness despite the drought and harsh weather.

The team is convinced that all the on-farm trials, demonstration, multiplication, and multilocational trials in the state were planted and managed.

Enugu State

On-farm trials. The field layout in all the trials visited was properly done. However, there were no labels or signboards to indicate each plot or variety. Many of the varieties were quite impressive to the farmers who pledged commitment to the project in subsequent planting seasons. Plant stand in a few fields was poor either due to serious termite damage or late planting. Mealybug infestation was observed on 97/4769. Agronomic requirements for the control of termites need to be made available to farmers. Fertilizer availability in quantity and price will enable farmers to improve the poor soil nutrient status characteristic of soils in the state.

Demonstration. Activities were effectively carried out and 34 varieties were laid out in the demonstration plot. Plot labeling was good but there were no signposts. The farmers handling this activity complained that no financial assistance was given to them. Farmers are aware of the objectives of this activity but there is need to sensitize more farmers. Pests particularly, grasscutters and termites, caused some damage to plants.

Multiplication. A visit was made to 1.15 ha of farmer managed multiplication at the University of Nigeria, Nsukka. There were no signposts and labeling was poor. Varietal mixtures were observed in some plots and this may have resulted from farmers supplying dead stakes with their local variety or any other available improved variety. Damage by cattle and termites remain the major constraints. The farmers involved in the multiplication of these new varieties complained of funding and untimely supply of planting materials.

Multilocational trial. A set of three uniform yield trials with a total of 40 new CMD-resistant genotypes and three checks was visited at the Teaching and Research Farm of the

University of Nigeria, Nsukka. The trial is well-managed, with proper labeling which would be suitable for farmers' field day.

From the foregoing, the team is convinced that all the on-farm trials, demonstration, multiplication, and multilocational trials in the state were all planted and managed. The few comments made by the team should be considered when establishing subsequent trials.

Ebonyi State

On-farm trials. The trials visited were strategically located for the benefit of other farmers and were properly maintained. However, the soils are poor, planting was late, and farmers expected some financial assistance.

Demonstration. Two demonstration plots with 31 genotypes each were visited. Field layout and maintenance were very good. CMD symptoms were not observed, however, mealybug attacked a few plants.

Multiplication. A multiplication plot (3.3 ha) of 20 CMD-resistant genotypes was seen at Abakaliki. The field meets all required standards in terms of layout, varietal purity, and maintenance except that there were no signboards.

Multilocational trial. Forty CMD-resistant genotypes, managed by NRCRI, were planted in three sets of uniform yield trials, within the premises of the college of Agriculture, Ishiagu. The trials were properly maintained. Although CMD symptoms were not common, some of the genotypes were susceptible to the cassava green mite.

All the on-farm and multilocational, demonstration, and multiplication trials required were planted in the state. The ADP/farmer relationship in the state should be improved for better success. Cassava stem sale has developed in some communities and this should be target areas for the commercialization of stem production of emerging CMD-resistant genotypes.

Anambra State

On-farm trials. Ten on-farm trials were visited on the basis of which the team gave a pass mark to this activity in the state. All the trials were properly maintained except for the recurrent problem of signposts. CMD symptoms were not observed on the plants but mealybug, green mites, grasshopper, termites, and spiralling whitefly attacked some of the varieties. The farmers were quite pleased with the performance of the new varieties but they expected some financial assistance.

Demonstration. Three demonstration plots with 27–36 genotypes were visited in the state. The plots were properly laid out, maintained, and labeled. Some genotypes, particularly 92B/00061, had poor establishment thus reducing plant stands in some plots.

Multiplication. A 2-ha multiplication of 29 genotypes was visited at Igbariam. The field was properly maintained.

Multilocational trial. The multilocational trial, managed by the Nigerian Starch Mills (NSM) at Awka, was abandoned due to severe soil erosion. The team did not visit the site.

The level of ADP staff commitment to the project in the state was high. Records of all fields, varieties, and other related data were properly documented. Generally, the farmers have high expectations and they are waiting impatiently for the varieties that will give them higher root yield than their conventional "U2" local best.

Team 3

Bayelsa, Delta, Edo, and Ondo states

Summary

The team visited and monitored on-farm and demonstration trials, multiplication sites, and multilocational trials in Bayelsa, Delta, Edo, and Ondo states (Table 6). The team confirmed that all the trials were established and that the cassava genotypes were on ground. All the tested genotypes showed good resistance to CMD.

Among the constraints encountered by the farmers were low soil fertility, funds, high cost and scarcity of labor, and inputs.

Actions previewed to cover for the constraints identified were:

- Trials should be farmer-oriented and thus farmers participation would remove some of the constraints.
- ADPs should practice participatory extension services thereby allowing the farmers the right of ownership of all field trials and demonstration plots.
- On-farm trials should be scattered enough to capture soil variabilities for effective selection.
- Proper soil management practice should be adopted to improve soil fertility in Agbarho area of Delta State.

In all the states visited the team could not observe commercialization of cassava planting materials due to two major reasons:

1. Farmer-to-farmer distribution of cassava cuttings without cost or payment.
2. The monitoring took place in the dry season when farmers were yet to plan for the planting season.

The team observed much variation among the states visited in respect of community participation. For example, about 80% of the trials were carried out by Delta State ADP while in Ondo State, it was the multiplication trial that was established by Ondo State ADP.

Report by states

Bayelsa State

On-farm trials

Plant establishment. Sprouting and plant growth were good in all the on-farm trials visited except for one that was planted late.

Field maintenance. Good field maintenance was observed in all farms .

Pests and diseases. Most of the plants were disease free.

Demonstration trials

Plant establishment. Plant stands and growth were good but with a few missing stands in one of the demonstration trials.

Field maintenance. The fields were moderately maintained.

Pests and diseases. Most of genotypes were disease-free except 30572 and 4 (2) 1425 that showed high severity of mosaic disease. Mild cassava bacterial blight (CBB) infection was observed on some of the genotypes at the Community Secondary School, Biobolo, Yenagoa.

Multiplication

A multiplication field of 0.6 ha was visited.

Plant establishment. Plant establishment and growth were very good.

General observation

- There was not much interaction between farmers and ADP staff as regards the Project.
- No commercialization of planting material.
- Farmers failed to see the farms as their own.

Constraint

High cost of labor.

Delta State

On-farm trials

Establishment. Plant establishment and growth were good. Maintenance was equally good in all the farms visited.

Diseases: Most of the plants were disease-free except for mild infection of CBB and root-rot on one of the farms.

General observation

- Most farms were not scattered enough to capture environmental variabilities for effective selection.
- Many farmers were not available for possible interaction during the time of inspection.

Constraints

The farmers complained of nonavailability of inputs such as fertilizers.

Demonstration trials

The first demonstration visited at Agbarho was characterized with good plant establishment but stunted growth was noticed due to low soil fertility. Two other demonstrations were visited at Obior and Ibusa.

Establishment. Plant establishment and growth were observed to be good except for few missing stands at Ibusa due to termite attack.

Pests and diseases. The crops showed good resistance to diseases and pests.

Maintenance: Field maintenance was generally good except for Obior where late weeding was done.

Multiplication

One multiplication site of 0.7 ha was visited. Plant establishment was good. However, stunted growth was observed despite fertilizer application.

Pests and diseases. Plants were disease-free except for pockets of mealybug observed on some of the genotypes.

General observation

Opportunities were not given to farmers to conduct multiplication's trials. This was done by ADP staff.

Multilocational

One multilocational farm of 43 genotypes on 0.7 ha was visited at Agbarho.

Establishment: Missing stands were observed due to waterlogging of the land at the time of planting.

Diseases and pests: Pockets of mealybug attack were observed on some genotypes. There was mild infection of CBB on some genotypes.

General recommendation

On-farm, demonstration, and multiplication trials should be carried out by farmers (i.e., be farmer oriented). Proper soil management practices should be adopted in Agbarho areas rather than blanket fertilizer application.

Edo State

On farms

Establishment: Low plant stands were observed in most of the on-farm trials due to delay in planting after supply of cassava stems. Similarly, stunted growth was also observed in some of the on-farm trials.

Field maintenance. Most of the fields were moderately maintained.

Pests and diseases. Anthracnose disease was observed on few leaves in two on-farm trials. Again, drought was pronounced in most on-farm trials.

Demonstrations trials

Establishment. Good plant establishment were observed in all the demonstration trials except for few missing stands. The growth rate was moderately good.

Field maintenance. Adequate field maintenance.

Pests and diseases. An unusual form of mosaic symptoms was observed on 4 (2) 1425 in the ADP demonstration trials. Anthracnose disease was also noticed on some genotypes as well as cassava bacterial blight. The shedding of leaves was observed on most genotypes in Edo central.

Multiplication

Establishment. The team visited 1.5 ha of multiplication farm at Evboyare. Plant establishment, growth, and vigor were very good.

Field maintenance. The field was properly managed.

Pests and diseases. There was no symptom of disease on all plants except shedding of leaves.

Multilocal trials

Establishment. The plant establishment was good.

Field maintenance. The field was well-managed.

Pests and diseases. There was no noticeable symptom of pest or disease.

General observation

- The materials were not planted immediately after distribution which resulted in missing stands in some genotypes.
- One of the farms was destroyed by fire at Iguebe.
- Some cassava stands were broken by cattle in one demonstration trial, also at Iguebe.
- No commercialization of cassava stems. Planting materials were sourced from ADP.

Constraints

- Nonavailability of labor.
- High cost of labor.
- Inadequacy of farm input.

Ondo State

On-farm trial

Establishment: In all the farms visited, the team observed good plant establishment, growth and vigor.

Field maintenance. All the on-farm trials were properly maintained.

Pests and diseases. There was no symptoms of diseases or pests on all plants except for one on-farm trial at Isuada which exhibited mild infestation of mite, CAD, and CBB infection.

Demonstration trials

Establishment. The demonstration trials visited were properly managed and found to have good establishment.

Field maintenance. The demonstration trials were kept under good weed management.

Pests and diseases. The demonstration trials were found to be disease- and pest-free.

Multiplication

A multiplication plot of three hectares was visited. Plant establishment and growth were found to be good.

Field maintenance. The multiplication field required another weeding due to early rainfall.

Pests and diseases. There were no noticeable pests and diseases in the multiplication field.

Table 6. Trials visited by team 3.

State	On-farm trials	Demonstration	Multiplication	Multilocational
Ondo	8	3	1	–
Edo	8	3	1	1
Delta	10	3	1	1
Bayelsa	8	3	1	–

Recommendations

Due to what was encountered in all trial sites in terms of questions and answers, the team recommends the following for future undertaking:

- Site selection for crop establishment: The team recommends that a system be put in place for assurance of good and comfortable sites.
- Where inputs will be required, it must be mandatory for such a place to get the inputs.
- Planting material/distribution—the team recommended that it should be done in such a way to avoid delay of planting materials.

Based on our overall observations, the states were rated as follows: Ondo, Bayelsa, Edo, and Delta.

Appendices

Letter of invitation and Terms of reference

3 February 2004

Dear Sir/Madam

Monitoring tour of field activities of the Pre-emptive Management of Cassava Mosaic Disease Project in south-south and south-east zones of Nigeria.

Please be informed that the field monitoring tour for the Preemptive Management of CMD project will take place in the last week of 22–28 February 2004.

I propose arrival of team on afternoon of 22 February 2004 at IITA Humid Forest Station at Onne, so that work can begin on 23 February 2004. Your early arrival will permit the preliminary briefings on the expectations and modalities.

Three teams were formed with four representatives per team.

The team will be met on arrival in each state by the Commissioner of Agriculture or his nominee the Program Manager of the ADP, and the CMD project coordinator.

Each team will be assisted in each state to be visited by the state officers that have been working in close partnership with the project. They will guide the team (in their own vehicle, fuelled by CMD) only within their own state.

Composition of the three teams based on one or two representative(s) per agency:

Team one	Team two	Team three
FGN	USAID	NDDC
NNPC	NRCRI	CGAN
IAR&T	PQS	RTEP
IITA	IITA	IITA
State Officials	State Officials	State Officials

Terms of reference

States to be visited by teams

Team one: Rivers, Akwa Ibom, Cross River, Imo

Team two: Anambra, Enugu, Abia, Ebonyi

Team three: Ondo, Edo, Delta, Bayelsa

What to monitor

Each team will visit 10 of the 110 on-farm trials, three of the eight demonstrations plot, one of the multiplication sites, and the multilocational trial in each state.

The choice of the fields to visit will be decided by the team after a list of all sites are made available to them. Their choice will depend on criteria they may wish to adopt.

Report on the following:

- General state of the activity indicating the effectiveness of the work done so far.
- Note any constraints being encountered.

- Consider and report what actions have been previewed to cover for the constraints identified.
- Extent of participation by community in cassava planting material production and commercialization in the project area.

Deliverable

A report by each team on the four states visited with sections touching on the above four aspects.

Thank you.

Yours sincerely,

Dr Emelike Okoro

Project National Coordinator

On-farm trials

Name of farmer/group	Village/community	Varieties
Sunday Ogirinyah	Elebele	97/4769, M98/0040, 92B/00061
Ebede America	Elebele	92/0067, 94/0561, 92/0326
Azibanaghali O.	Elebele	97/0211, 91/02324B, TME419
Blessing A.	Elebele	98/0002, 97/0162, 94/0026
Mongrama Iwani	Elebele	97/4763, 95/0289, 98/2226
Inatimi G.	Elebele	92/0057, 92B/00068, 92/0325
Emesue B.	Imiringi	96/1632, 98/0581, 98/0510
J. Okpu	Imiringi	95/0166, 97/4779, 98/2101
Victoria Edighota	Imiringi	98/0505, 96/0603, 97/3200
S. Emakitor	Imiringi	94/0039, 97/2205, 96/1642
Anna Modibo	Imiringi	99/0186, 95/0379, 91/02324A
Theresa Abraham	Otuoke	97/3200, 96/0603, 98/0505
Yilaziba Apiri	Otuoke	TME 419, 91/02324B, 97/0211
Itabai Obeh	Otuoke	99/6012, 95/0379, 91/02324A
Ibhisoguan Migbam	Otuoke	92/0326, 95/0067, 94/0561
Adiamologi Dike	Otuoke	92/0325, 92/0057, 92B/00068
Lot Ogiasa	Otuoke	94/0026, 98/0002, 97/0162
Areguo Idumangi	Otuoke	95/0289, 97/4763, 98/2226
Gold Ikuru	Otuoke	94/0039, 97/3205, 96/1642
Awudum Joshua	Otuoke	98/2101, 95/0166, 97/4779
Azibakodiakinam Frank	Otuoke	92B/00061, 97/4769, M98/0040
Eyili Obodo	Otuoke	96/1632, 98/0581, 98/0510
Ghani-Ere Owuku	Tungbo	97/4769, M98/0040, 92B/00061
Enest William	Tungbo	95/0379, 99/6012, 91/02324A
Dlubra Willy	Tungbo	92/0067, 94/0561, 92/0326
Enebraye Mankinimo	Tungbo	97/0211, 91/02324B, TME 419
Lovena Endurance	Tungbo	98/0002, 97/0162, 94/0026
Tungbowei J.	Tungbo	94/0039, 97/2205, 96/1642
Epidi J.	Tungbo	92/0057, 92B/00068, 92/0325
Celina	Tungbo	96/1632, 98/0581, 98/0510
Florence Paul	Tungbo	95/0166, 97/4779, 98/2101
Wenebimo-Ere Jimmy	Tungbo	97/4763, 95/0289, 98/2226
Atani Tonkiri	Tungbo	98/0505, 96/0603, 97/3200
Raphael A.	Sagbama	92/0067, 94/0561, 92/0326
Christian Kiribar	Sagbama	95/0379, 99/6012, 91/02324A
Ebolomo-Ere Diede	Sagbama	92/0067, 94/0561, 92/0326
Ayebibor	Sagbama	97/0211, 91/02324B, TME 419
Ifie Richman	Sagbama	98/0002, 97/0162, 94/0026
Victoria Okorite	Sagbama	98/0505, 96/0603, 97/3200
Eunice Okio	Otuokpoti/Gbura	92/0057, 92B/00068, 92/0325

Appendix 4. Bayelsa State (contd)

Name of farmer/group	Village/community	Varieties
Aniadum Everada	Otuokpoti/Gbura	96/1632, 98/0581, 98/0515
Diamond Theophilus	Otuokpoti/Gbura	95/0166, 97/4779, 98/2101
Amina Theophilus	Otuokpoti/Gbura	97/4763, 95/0289, 98/2226
Theresa Kei	Otuokpoti/Gbura	98/0505, 96/0603, 97/3200
Shine Dagana	Yenezue-Gene	97/4769, M98/0040, 92B/0061
Uzamama Ogon	Yenezue-Gene	95/0379, 99/6012, 91/02324A
Kalaerebo Uyaba	Yenezue-Gene	92/0067, 94/0561, 92/0326
Sinikiem Malawa	Yenezue-Gene	97/0211, 91/02324B, TME 419
Yenimetivie Miete	Yenezue-Gene	98/0002, 97/0162, 94/0026
Katherine Oruama	Yenezue-Gene	94/0039, 97/2205, 96/1642
Molly Fidelis	Yenezue-Gene	92/0057, 92B/00068, 92/0325
Inue Somfa	Yenezue-Gene	96/1632, 98/0581, 98/0510
Dorathy Somfa	Yenezue-Gene	95/0166, 97/4779, 98/2101
Atweyo	Yenezue-Gene	97/4763, 95/0289, 98/2226
Izibalua Fabiri	Yenezue-Gene	98/0505, 96/0603, 97/3200
Mrs Ogbogidi Roseline	Nedugo-Agbia	97/4769, M98/0040, 92B/0061
Mrs Pinatiti Okoroh	Nedugo-Agbia	95/0379, 99/6012, 91/02324A
Mrs Roseline Youpele	Nedugo-Agbia	92/0067, 94/0561, 92/0326
Mrs Zimaima Stephen	Nedugo-Agbia	97/0211, 91/02324B, TME 419
Mr Ebiemi Ogbogidi	Nedugo-Agbia	98/0002, 97/0162, 94/0026
Mrs Ebiemi Gold Ogbogidi	Nedugo-Agbia	94/0039, 97/2205, 96/1642
Mrs Anayi Usaka	Nedugo-Agbia	92/0057, 92B/00068, 92/0325
Mrs Butter Ogbulagha	Nedugo-Agbia	96/1632, 98/0581, 98/0510
Mrs Timinipre Kemebigha	Nedugo-Agbia	95/0166, 97/4779, 98/2101
Mrs Doukoru Kuraiba	Nedugo-Agbia	97/4763, 95/0289, 98/2226
Mrs Ayibatari Kemebigha	Nedugo-Agbia	98/0505, 96/0603, 97/3200
Mrs Tokoni Oweifa	Ogboloma	97/4769, M98/0040, 92B/0061
Mrs Agnes Overseer	Ogboloma	95/0379, 99/6012, 91/02324
Mr Ogede Franklin Itu	Ogboloma	92/0067, 94/0561, 92/0326
Mr Andabai	Ogboloma	97/0211, 91/02324B, TME 419
Wonyiditoripre Wozi	Ogboloma	98/0002, 97/0162, 94/0026
Ukuyibofa Ogon	Ogboloma	94/0039, 97/2205, 96/1642
Bunadeiya Wozi	Ogboloma	92/0057, 92B/00068, 92/0325
Michael A.T. Joel	Ogboloma	96/1632, 98/0581, 98/0510
Mad. D.J. Oruama	Ogboloma	95/0166, 97/4779, 98/2101
Mr John A.C. Oruama	Ogboloma	97/4763, 95/0289, 98/2226
Tobolayefa B	Ogboloma	98/0505, 96/0603, 97/3200
Mrs Ogo Itabai	Anyama Ogbia	97/4769, M98/0040, 92B/00061
Mrs Joyce Seibofa	Anyama Ogbia	95/0379, 99/6012, 91/02324A
Mrs Mool Ogoniba	Anyama Ogbia	97/0211, 91/02324B, TME 419
Mrs Onyoma Aloko	Anyama Ogbia	98/0002, 97/0162, 94/0026
Mrs Atua Roseline	Anyama Ogbia	94/0039, 97/2205, 96/1642
Mr Edum Dorcas	Anyama Ogbia	92/0057, 92B/00068, 92/0325
Mr Joy Oyibo	Anyama Ogbia	96/1632, 98/0581, 98/0510
Mrs Delphinah Igue	Anyama Ogbia	95/0166, 97/4779, 98/2101

Appendix 4. Bayelsa State (contd)

Name of farmer/group	Village/community	Varieties
Mrs Igoko Elthia	Anyama Ogbia	97/4763, 95/0289, 98/2226
Mrs Idumaro	Anyama Ogbia	98/0505, 96/0603, 97/3200
Mrs Samuel Etupka	Anyama Ogbia	92/0057, 92B/00068, 92/0325
Mrs Kemiemi Ebansi	Anyama Ogbia	96/1632, 98/0581, 98/0510
Inemo	Agudama	95/0379, 99/6012, 91/02324A
Virgina B.	Agudama	92/0067, 94/0561, 92/0326
Angelina Nimizugha	Agudama	97/0211, 91/02324B, TME 419
Edward E.	Agudama	98/0002, 97/0162, 94/0026
Miedikumo	Agudama	94/0039, 97/2205, 96/1642
Emanisi	Agudama	92/0057, 92B/00068, 92/0325
Tarigberi Okitah	Bomoundi	95/0166, 97/4779, 98/2101
Ebinepre Oken	Bomoundi	97/4763, 95/0289, 98/2226
Milly Appah	Bomoundi	98/0505, 96/0603, 97/3200
Joseph A	Bomoundi	97/4769, M98/0040, 92B/0061
Ebi Gopregha	Odi	97/4769, M98/0040, 92B/00061
Ineye Subi	Odi	95/0379, 99/6012, 91/02324A
Nasingha	Odi	92/0067, 94/0561, 92/0326
Hill Wariebiwei	Odi	97/0211, 91/02324B, TME 419
Jeremiah Akigbegha	Odi	98/0002, 97/0162, 94/0026
Ebi Ipomowei	Odi	94/0039, 97/2205, 96/1642
Ineye Bariweni	Odi	92/0057, 92B/00068, 92/0325
Raphael August	Odi	96/1632, 98/0581, 98/0510
Seiyeta Suote	Odi	95/0166, 97/4779, 98/2101
Ebinimi Asaigbe	Odi	97/4763, 95/0289, 98/2226
Julianah Bariweni	Odi	98/0505, 96/0603, 97/3200

Demonstration trials

No of varieties: 40 hectrage: 0.2 ha on each location

Name of farmer	community/ Village	Varieties
Mr Azibator Oginyah	Elebele	97/4769, 91/02321, 92/0326 92/0325, 92/0067, 92/0057 92B/00068, 92B/00061, 94/0039, 94/0026, 94/0561 95/0166, 95/0289, 95/0379, 96/0603, 96/ 0523, 96/1642, 96/1632, 97/4779, 97/4763, 97/3200, 97/2205, 97/0211, 97/0162, 98/ 0581, 98/0510, 98/2226, 98/2101, 99/6012, 99/2123, M98/0068, M98/0040, M98/0028, TME419, 4(2)1425, 82/00058 30572, 98/0002, 98/0505, 99/3073
Community Sec. Sch.	Biogbolo	97/4769, 91/02321, 92/0326, 92/0325, 92/0067, 92/0057, 92B/00068, 92B/00061, 94/0039, 94/0026, 94/0561, 95/0166, 95/0289, 95/0379, 96/0603, 96/0523, 96/1642, 96/1632, 97/4779, 97/4763, 97/3200, 97/2205, 97/0211 97/0162, 98/0581, 98/0510, 98/2226, 98/2101, 99/6012, 99/2123, M98/0068, M98/0040, M98/0028, TME419, 4(2)1425, 82/00058, 30572, 98/0002, 98/0505, 99/3073
Mr Bariweni	Odi	97/4769, 91/02321, 92/0326, 92/0325, 92/0067, 92/0057, 92B/00068, 92B/00061, 94/0039, 94/0026, 94/0561, 95/0166, 95/0289, 95/0379, 96/0603, 96/ 0523, 96/1642, 96/1632, 97/4779, 97/4763, 97/3200, 97/2205, 97/0211, 97/0162, 98/ 0581, 98/0510, 98/2226, 98/2101, 99/6012, 99/2123, M98/0068, M98/0040, M98/0028, TME 419, 4(2)1425, 82/00058, 30572, 98/0002, 98/0505, 99/3073,
Chief E.J. Ataria	Anyama	97/4769, 91/02321, 92/0326, 92/0325, 92/0067, 92/0057, 92B/00068, 92B/00061, 94/0039, 94/0026, 94/0561, 95/0166, 95/ 0289, 95/0379, 96/0603, 96/0523, 96/1642, 96/1632, 97/4779, 97/4763, 97/3200, 97/ 2205, 97/0211, 97/0162, 98/0581, 98/0510, 98/2226, 98/2101, 99/6012, 99/2123, M98/0068, M98/0040, M98/0028, TME 419, 4(2)1425, 82/00058, 30572, 98/0002, 98/0505, 99/3073,

Demonstration trials (contd)

Name of farmer	Community/village	Varieties
Yougha Ebi	Sagbama	97/4769, 91/02321, 92/0326, 92/0325, 92/0067, 92/0057, 92B/00068, 92B/00061, 94/0039, 94/0026, 94/0561, 95/0166, 95/0289, 95/0379, 96/0603, 96/0523, 96/1642, 96/1632, 97/4779, 97/4763, 97/3200, 97/2205, 97/0211, 97/0162, 98/0581, 98/0510, 98/2226, 98/2101, 99/6012, 99/2123, M98/0068, M98/0040, M98/0028, TME 419, 4(2)1425, 82/00058, 30572, 98/0002, 98/0505, 99/3073
Mrs Attah Okutah	Bomoundi	97/4769, 91/02321, 92/0326, 92/0325, 92/0067, 92/0057, 92B/00068, 92B/00061, 94/0039, 94/0026, 94/0561, 95/0166, 95/0289, 95/0379, 96/0603, 96/0523, 96/1642, 96/1632, 97/4779, 97/4763, 97/3200, 97/2205, 97/0211, 97/0162, 98/0581, 98/0510, 98/2226, 98/2101, 99/6012, 99/2123, M98/0068, M98/0040, M98/0028, TME 419, 4(2)1425, 82/00058, 30572, 98/0002, 98/0505, 99/3073
Mr I. Kemebigha	Nedugo-Agbia	97/4769, 91/02321, 92/0326, 92/0325, 92/0067, 92/0057, 92B/00068, 92B/00061, 94/0039, 94/0026, 94/0561, 95/0166, 95/0289, 95/0379, 96/0603, 96/0523, 96/1642, 96/1632, 97/4779, 97/4763, 97/3200, 97/2205, 97/0211, 97/0162, 98/0581, 98/0510, 98/2226, 98/2101, 99/6012, 99/2123, M98/0068, M98/0040, M98/0028, TME 419, 4(2)1425, 82/00058, 30572, 98/0002, 98/0505, 99/3073
Mr L. Dorgu	Amassoma	97/4769, 91/02321, 92/0326, 92/0325, 92/0067, 92/0057, 92B/00068, 92B/00061, 94/0039, 94/0026, 94/0561, 95/0166, 95/0289, 95/0379, 96/0603, 96/0523, 96/1642, 96/1632, 97/4779, 97/4763, 97/3200, 97/2205, 97/0211, 97/0162, 98/0581, 98/0510, 98/2226, 98/2101, 99/6012, 99/2123, M98/0068, M98/0040, M98/0028, TME 419, 4(2)1425, 82/00058, 30572, 98/0002, 98/0505, 99/3073

Multiplication trials

No of varieties : 40 hectare: 1ha in each community

Name of farmer	Community/village	Varieties
Chief Kemebiagha	Nedugo-Agbia	97/4769, 91/02321, 92/0326, 92/0325, 92/0067, 92/0057, 92B/00068, 92B/00061, 94/0039, 94/0026, 94/0561, 95/0166, 95/0289, 95/0379, 96/0603, 96/0523, 96/1642, 96/1632, 97/4779, 97/4763, 97/3200, 97/2205, 97/0211, 97/0162, 98/0581, 98/0510, 98/2226, 98/2101, 99/6012, 99/2123, M98/0068, M98/0040, M98/0028, TME 419, 4(2)1425, 82/00058, 30572, 98/0002, 98/0505, 99/3073,
J. Igboba	Imiringi	97/4769, 91/02321, 92/0326, 92/0325, 92/0067, 92/0057, 92B/00068, 92B00061, 94/0039, 94/0026, 94/0561, 95/0166, 95/0289, 95/0379, 96/0603, 96/0523, 96/1642, 96/1632, 97/4779, 97/4763, 97/3200, 97/2205, 97/0211, 97/0162, 98/0581, 98/0510, 98/2226, 98/2101, 99/6012, 99/2123, M98/0068, M98/0040, M98/0028, TME 419, 4(2)1425, 82/00058, 30572, 98/0002, 98/0505, 99/3073,

Appendix 5. Cross River State

On-farm trial

Name of farmer	Location/ community	Varieties
Oblechor Agu	Okpoma – Yala	95/0166, 96/1642, M98/0068, 30572 Local

Multilocational trial

Evaluation of 40 new CMD-resistant genotypes and three checks

Location: Green River Project of NAOC, Obrikom

Hectarage: 0.7 ha

About IITA

The International Institute of Tropical Agriculture (IITA) was founded in 1967 as an international agricultural research institute with a mandate for improving food production in the humid tropics and to develop sustainable production systems. It became the first African link in the worldwide network of agricultural research centers known as the Consultative Group on International Agricultural Research (CGIAR), formed in 1971.

IITA's mission is to enhance the food security, income, and well-being of resource-poor people primarily in the humid and subhumid zones of sub-Saharan Africa, by conducting research and related activities to increase agricultural production, improve food systems, and sustainably manage natural resources, in partnership with national and international stakeholders. To this end, IITA conducts research, germplasm conservation, training, and information exchange activities in partnership with regional bodies and national programs including universities, NGOs, and the private sector. The research agenda addresses crop improvement, plant health, and resource and crop management within a food systems framework and is targeted at the identified needs of three major agroecological zones: the savannas, the humid forests, and the midaltitudes. Research focuses on smallholder cropping and postharvest systems and on the following food crops: cassava, cowpea, maize, plantain and banana, soybean, and yam.

Integrated Cassava Project (ICP)

Promoting the Cassava Industry

The Integrated Cassava Project (ICP) contributes to a sustainable increase in food availability, reduces rural poverty and unemployment, and enhances agro-industrial and socioeconomic growth in Nigeria. This is achieved by mitigating the impact of Cassava Mosaic Disease and preventing its spread throughout Nigeria and West Africa.

ICP increases cassava productivity by deploying high yielding resistant cultivars and adapting improved and profitable postharvest and processing methods. This improved production of cassava gives value by increasing private sector investment in production, processing, storage, and marketing. It is the hope of ICP that incomes will be raised and the livelihood of farmers improved with the increased commercial use of cassava.

ICP is funded by the Federal Government of Nigeria, the Niger Delta Development Commission (NDDC), major oil-producing companies, and the 12 States in southern Nigeria.
