

London Mathematical Society Lecture Note Series. 336

Integral Closure of Ideals, Rings, and Modules

Craig Huneke
University of Kansas

Irena Swanson
Reed College, Portland

Contents

Contents	v
Table of basic properties	ix
Notation and basic definitions	xi
Preface	xiii
1. What is integral closure of ideals?	1
1.1. Basic properties	2
1.2. Integral closure via reductions	5
1.3. Integral closure of an ideal is an ideal	6
1.4. Monomial ideals	9
1.5. Integral closure of rings	13
1.6. How integral closure arises	14
1.7. Dedekind–Mertens formula	17
1.8. Exercises	20
2. Integral closure of rings	23
2.1. Basic facts	23
2.2. Lying–Over, Incomparability, Going–Up, Going–Down	30
2.3. Integral closure and grading	34
2.4. Rings of homomorphisms of ideals	39
2.5. Exercises	42
3. Separability	47
3.1. Algebraic separability	47
3.2. General separability	48
3.3. Relative algebraic closure	52
3.4. Exercises	54
4. Noetherian rings	56
4.1. Principal ideals	56
4.2. Normalization theorems	57
4.3. Complete rings	60
4.4. Jacobian ideals	63
4.5. Serre’s conditions	70
4.6. Affine and \mathbb{Z} –algebras	73
4.7. Absolute integral closure	77
4.8. Finite Lying–Over and height	79
4.9. Dimension one	83
4.10. Krull domains	85
4.11. Exercises	89
5. Rees algebras	93
5.1. Rees algebra constructions	93
5.2. Integral closure of Rees algebras	95
5.3. Integral closure of powers of an ideal	97

5.4. Powers and formal equidimensionality	100
5.5. Defining equations of Rees algebras	104
5.6. Blowing up	108
5.7. Exercises	109
6. Valuations	113
6.1. Valuations	113
6.2. Value groups and valuation rings	115
6.3. Existence of valuation rings	117
6.4. More properties of valuation rings	119
6.5. Valuation rings and completion	121
6.6. Some invariants	124
6.7. Examples of valuations	130
6.8. Valuations and the integral closure of ideals	133
6.9. The asymptotic Samuel function	138
6.10. Exercises	139
7. Derivations	143
7.1. Analytic approach	143
7.2. Derivations and differentials	147
7.3. Exercises	149
8. Reductions	150
8.1. Basic properties and examples	150
8.2. Connections with Rees algebras	154
8.3. Minimal reductions	155
8.4. Reducing to infinite residue fields	159
8.5. Superficial elements	160
8.6. Superficial sequences and reductions	165
8.7. Non-local rings	169
8.8. Sally's theorem on extensions	171
8.9. Exercises	173
9. Analytically unramified rings	177
9.1. Rees's characterization	178
9.2. Module-finite integral closures	180
9.3. Divisorial valuations	182
9.4. Exercises	185
10. Rees valuations	187
10.1. Uniqueness of Rees valuations	187
10.2. A construction of Rees valuations	191
10.3. Examples	196
10.4. Properties of Rees valuations	201
10.5. Rational powers of ideals	205
10.6. Exercises	208
11. Multiplicity and integral closure	212
11.1. Hilbert–Samuel polynomials	212
11.2. Multiplicity	217

11.3. Rees's theorem	222
11.4. Equimultiple families of ideals	225
11.5. Exercises	232
12. The conductor	234
12.1. A classical formula	235
12.2. One-dimensional rings	235
12.3. The Lipman–Sathaye theorem	237
12.4. Exercises	242
13. The Briançon–Skoda Theorem	244
13.1. Tight closure	245
13.2. Briançon–Skoda via tight closure	248
13.3. The Lipman–Sathaye version	250
13.4. General version	253
13.5. Exercises	256
14. Two-dimensional regular local rings	257
14.1. Full ideals	258
14.2. Quadratic transformations	263
14.3. The transform of an ideal	266
14.4. Zariski's theorems	268
14.5. A formula of Hoskin and Deligne	274
14.6. Simple integrally closed ideals	277
14.7. Exercises	279
15. Computing integral closure	281
15.1. Method of Stolzenberg	282
15.2. Some computations	286
15.3. General algorithms	292
15.4. Monomial ideals	295
15.5. Exercises	297
16. Integral dependence of modules	302
16.1. Definitions	302
16.2. Using symmetric algebras	304
16.3. Using exterior algebras	307
16.4. Properties of integral closure of modules	309
16.5. Buchsbaum–Rim multiplicity	313
16.6. Height sensitivity of Koszul complexes	319
16.7. Absolute integral closures	321
16.8. Complexes acyclic up to integral closure	325
16.9. Exercises	327
17. Joint reductions	331
17.1. Definition of joint reductions	331
17.2. Superficial elements	333
17.3. Existence of joint reductions	335
17.4. Mixed multiplicities	338
17.5. More manipulations of mixed multiplicities	344

17.6. Converse of Rees's multiplicity theorem	348
17.7. Minkowski inequality	350
17.8. The Rees–Sally formulation and the core	353
17.9. Exercises	358
18. Adjoints of ideals	360
18.1. Basic facts about adjoints	360
18.2. Adjoints and the Briançon–Skoda Theorem	362
18.3. Background for computation of adjoints	364
18.4. Adjoints of monomial ideals	366
18.5. Adjoints in two-dimensional regular rings	369
18.6. Mapping cones	372
18.7. Analogs of adjoint ideals	375
18.8. Exercises	376
19. Normal homomorphisms	378
19.1. Normal homomorphisms	379
19.2. Locally analytically unramified rings	381
19.3. Inductive limits of normal rings	383
19.4. Base change and normal rings	384
19.5. Integral closure and normal maps	388
19.6. Exercises	390
Appendix A. Some background material	392
A.1. Some forms of Prime Avoidance	392
A.2. Carathéodory's theorem	392
A.3. Grading	393
A.4. Complexes	394
A.5. Macaulay representation of numbers	396
Appendix B. Height and dimension formulas	397
B.1. Going–Down, Lying–Over, flatness	397
B.2. Dimension and height inequalities	398
B.3. Dimension formula	399
B.4. Formal equidimensionality	401
B.5. Dimension Formula	403
References	405
Index	422
