

Integrated Watershed Management

Connecting People to Their Land
and Water

Hans M. Gregersen
Peter F. Ffolliott
Kenneth N. Brooks

Contents

Preface and Overview	ix
1. Challenges and Opportunities	1
Fundamental Questions Addressed	3
Challenges Faced	4
Water scarcity	6
Loss of protective vegetative cover and accelerated loss of soil resources	6
Soil loss and nutrient depletion in humid tropical regions	7
Problems of sustaining people's livelihood	7
Other challenges	8
Meeting the Challenges: Some Examples	8
Alleviating water scarcity in arid regions	9
Providing necessary natural resources to people	9
Reconciling timber production and other watershed values	10
Sustaining agricultural production on marginal lands	10
A success story	11
2. Land Use, Watershed Management and Cumulative Effects	13
Interactions of Land Uses	13
Availability of high-quality water	14
Agricultural cropping	18
Livestock production	19
Wood production and other forestry activities	20
Agroforestry practices	20
Urban development and roads	21
Linkages Between Land Use, Soil and Water	22
Achieving watershed management objectives	22
Maintaining good watershed condition	24
Sustaining and improving on-site productivity	25
Increasing water yield: implications for water supply	27
Improving water quality	32
Mitigating effects of landslides, debris flows and flooding	33
Groundwater implications	34
Rehabilitation activities	35
Watershed health: a dynamic equilibrium	36
Upstream–downstream connections	37
Cumulative Effects	38
3. Institutional Context	40
Water Governance	41
Institutional Effectiveness	43
Dealing with Conflicting Interests	44
Customary Water Rights, Water Laws and Treaties	45

Customary and statutory water rights	46
Land tenure and water rights	47
In-country water sharing agreements	48
International treaties and transcountry boundary institutions	49
Incentives and market-based institutions	51
Policy inferences	51
Other incentive considerations	52
Privatization of water	52
Water prices, subsidies and cost recovery	53
Payment for environmental services	54
Governmental Agencies, Land and Water User Groups and Other Organizational Mechanisms	55
Government agencies, boards and commissions	55
Water user groups and associations	59
4. Planning and Policy Making	64
Setting the Context for Planning	64
Watershed-level Planning and Action	67
Lessons from Past Experience: Lessons for the Future	73
Planning Elements	76
Parallel policy design	78
Planning Tools	78
Economics as a Planning and Management Tool	81
Principles related to economics as a planning and management tool	81
Principles related to values and valuation	84
Principles related to externalities, transfer payments and payments for environmental services	86
Steps in the economic assessment process	87
5. Hydrologic Processes and Technical Aspects	89
Introduction	89
Watershed Hydrology	89
Hydrologic Cycle	90
Water budget	92
Application of the water budget	94
Impacts of watershed characteristics on hydrologic processes	96
Precipitation	96
Interception	97
Evapotranspiration	99
Infiltration	101
Flow processes	102
Streamflow	103
Stream Channels, Floods, Flood Plains and Land Use	105
Annual Water Yield	107
Water Quality	107
Water quality management objectives	107
Water quality concerns	108
Importance of Monitoring	109

Precipitation	109
Streamflow	110
Water quality	110
6. Monitoring and Evaluation to Improve Performance	111
Relationship of Monitoring to Evaluation	112
Monitoring	112
Evaluation	113
Design of Monitoring Programmes	114
Determining information needs	115
The costs and benefits of monitoring information	119
Collecting Information	120
Information management	121
Monitoring the Biophysical System	121
Types of biophysical monitoring	122
Role of computer simulation modelling	124
Monitoring Socio-economic Impacts	125
Design of M&E Systems	126
Determining information needs	127
Timing of evaluations	128
Early warning signs	129
Evaluation focus	129
7. Research, Training, Information and Technology Transfer	131
Contributions of Research to Watershed Management	131
Roles of researchers and managers	132
Meeting people's needs	133
Training Activities	134
Classroom training activities	134
Training levels	134
A modular approach	135
Training formats	136
Learning methods	137
Planning training activities	138
Evaluation of training effectiveness	139
Distance learning	140
Recent innovations	140
Use of compact discs	141
Internet Applications	141
Email	142
Bulletin boards	142
Blogs	142
World Wide Web	143
8. Adaptive, Integrated Management of Watersheds:	145
Concluding Thoughts	
Role of Adaptive Management	145
Foundational Premise	146
Components of the Process	147
Framework of the Process	148
Alternative Models	149

Applying Adaptive Management	150
Conclusions	150
Annexes	153
Annex 3.1. A Process to Identify, Assess, and Deal with Policy Issues	153
Annex 3.2. Principles and Standards for Privatization	156
Annex 4.1. Stakeholders Categories	161
Annex 4.2. Time Value of Money, Discount Rates, Discounting and Compounding	165
Annex 4.3. Selected Bibliography of Useful References Dealing with the Economics of Natural Resources and Integrated Water and Watershed Management	167
Annex 6.1. A procedure for monitoring Water Quality to Insure Credibility and Consistency	168
Annex 6.2. Database Management Systems and Database Models	171
Annex 6.3. Computer Simulation Models	174
Annex 6.4. Geographic Information Systems	179
Annex 7.1. Establishing a Research Agenda	183
Annex 7.2. Illustrative Modules and Sessions for Watershed Management Training Activities	184
Annex 7.3. Planning Watershed Management Training Activities	185
References	188
Index	197
