CONTENTS

CHAPTER 1. DISCRETE DYNAMICAL SYSTEMS	1
Section 1. Discrete Dynamical Systems: Definition	2
1. Examples of Discrete Dynamical Systems	2
2. Definition of Discrete Dynamical Systems	9
Goals of This Book	12
Section 2. Stationary States and Periodic Orbits	16
1. Stationary States	16
Stable Stationary States	18
2. Periodic Orbits	21
Stable Periodic Orbits	23
Section 3. Chaotic Dynamical Systems	25
1. Limit Points, Limit Sets, and Aperiodic Orbits	25
2. Unstable Orbits and Chaotic Systems	30
Chaotic Behavior	33
Section 4. Examples of Discrete Dynamical Systems	34
One-Dimensional Example:	
Blood-Cell Biology	34
Two-Dimensional Examples:	
Predator-Prey Models	36
Three-Dimensional Example:	
Meteorology	40
Multidimensional Example:	
Neural Networks	42
CHAPTER 2. ONE-DIMENSIONAL DYNAMICAL SYSTEMS	45
Section 1. Cobweb and Conjugacy	46
1. The Cobweb Method	46
2. Conjugacy	50
Linear and Affine Systems	53
Section 2. Sinks and Sources	55
1. Stationary States and Periodic Orbits	55
2. Sinks	60
3. Sources	66
Instability	69
Section 3. Global Sinks	71
Section 4. Parameter Space Analysis	75
1. Fold, Transcritical, and Pitchfork Bifurcation	75
2. Period-Doubling Bifurcation	81
3. Bifurcation: A Theoretical Viewpoint	85
Section 5. Conjugacy and Chaos	93
Orbits of Conjugate Systems	93
Chaos in the Li-Yorke Sense	95
CHAPTER 3. \mathbf{R}^n , MATRICES, AND FUNCTIONS	99
Section 1. Structure of \mathbf{R}^n and Continuity	100

1. Norms and Sets.....	100
Vectors and Points.....	100
Euclidean Norm.....	102
Subsets of \mathbf{R}^n	102
Other Norms.....	104
2. Continuity.....	106
Section 2. Operator Norm and Derivative.....	111
1. Operator Norm.....	111
Operator Norm of a Matrix.....	113
2. Derivative and Mean Value Inequality.....	117
First-Order Approximation.....	118
Mean Value Inequality.....	120
CHAPTER 4. DISCRETE LINEAR DYNAMICAL SYSTEMS.....	123
Section 1. Orbits of Linear Processes.....	124
Section 2. Stability and Instability of the Origin.....	127
The Origin as an Attractor.....	127
The Origin as a Repeller.....	128
Section 3. Spectral Decomposition Theorem.....	131
SDT: Real, Semisimple Eigenvalues.....	134
SDT: Real, Not Semisimple Eigenvalues (*).....	137
SDT: When $\sigma(M)$ Has Complex Elements (*).....	139
Section 4. The Origin as a Saddle Point.....	146
Stable and Unstable Subspaces.....	146
Comparing Trajectories.....	149
Section 5. Eigenvalues with Modulus 1 (*).....	151
The Action of M on \mathbf{X}_1	152
The Action of M on \mathbf{X}_{-1}	154
The Action of M on \mathbf{X}_C	156
Section 6. Affine Systems.....	161
When 1 Is Not an Eigenvalue.....	161
When 1 Is an Eigenvalue (*).....	163
CHAPTER 5. NONLINEAR DYNAMICAL SYSTEMS.....	169
Section 1. Bounded Invariant Sets.....	170
Contractions.....	170
Dissipative Maps.....	171
Quasi-Bounded Maps.....	173
Section 2. Global Stability of Fixed Points.....	176
Banach Contraction Principle.....	176
Triangular Maps.....	177
Gradient Maps (*).....	179
Section 3. Sinks.....	182
Section 4. Repellers and Saddles.....	187
Repelling States.....	187
Saddles.....	189
Section 5. Bifurcation.....	192
Bifurcation from the Trivial Branch: $\mathbf{x}(a)=\mathbf{0}$	193

Hopf Bifurcation	196
CHAPTER 6. CHAOTIC BEHAVIOR	199
Section 1. Attractors	200
Section 2. Chaotic Dynamical Systems	205
Li-Yorke Chaos in \mathbf{R}^n	211
Section 3. Fractal Dimension	216
Capacity	217
Correlation Dimension	220
Section 4. Lyapunov Exponents	227
CHAPTER 7. ANALYSIS OF FOUR DYNAMICAL SYSTEMS	237
Section 1. Blood-Cell Population Model	238
Section 2. Predator-Prey Models	243
Section 3. Lorenz Model of Atmospheric Behavior	250
Section 4. Neural Networks	256
APPENDIX 1. MATHEMATICA PROGRAMS	263
Section 1. Graphing	264
1. Graphing Functions	264
2. Finding Fixed Points and Periodic Orbits Graphically	269
3. The Cobweb Method	271
Section 2. Iterates and Orbits	273
1. Iterates	273
2. Orbits	275
3. Orbits of Two-Dimensional Systems	283
4. Orbits of Linear Systems	285
Section 3. Bifurcation Diagrams, Lyapunov Exponents, and Correlation Dimension	286
1. Bifurcation Diagrams	286
2. Lyapunov Exponents	290
3. Correlation Dimension	293
Section 4. Odds and Ends	296
1. Matrices and Vectors Operations	296
2. Solving Equations	297
3. Assigning a Numerical Value to the Result of an Operation	299
APPENDIX 2. REFERENCES AND PROJECTS	301
1. References	301
2. Projects	305
APPENDIX 3. ANSWERS TO SELECTED PROBLEMS	311
INDEX	327
