Bristol and Philadelphia

Contents

	Preface	**xi**
1	**Introduction**	**1**
	1.1 What is an inverse problem?	1
	1.2 What is an ill-posed problem?	5
	1.3 How to cure ill-posedness	9
	1.4 An outline of the book	11
	PART 1	
	Image deconvolution	**17**
2	**Some mathematical tools**	**19**
	2.1 The Fourier Transform (FT)	19
	2.2 Bandlimited functions and sampling theorems	22
	2.3 Convolution operators	27
	2.4 The Discrete Fourier Transform (DFT)	30
	2.5 Cyclic matrices	36
	2.6 Relationship between FT and DFT	39
	2.7 Discretization of the convolution product	42
3	**Examples of image blurring**	**50**
	3.1 Blurring and noise	50
	3.2 Linear motion blur	54
	3.3 Out-of-focus blur	58
	3.4 Diffraction-limited imaging systems	60
	3.5 Atmospheric turbulence blur	67
	3.6 Near-field acoustic holography	69
4	**The ill-posedness of image deconvolution**	**75**
	4.1 Formulation of the problem	75
	4.2 Well-posed and ill-posed problems	77
	4.3 Existence of the solution and inverse filtering	79
	4.4 Discretization: from ill-posedness to ill-conditioning	81

4.5 Bandlimited systems: least-squares solutions and generalized solution 86
4.6 Approximate solutions and the use of *a priori* information 90
4.7 Constrained least-squares solutions 94

5 Regularization methods **98**
5.1 Least-squares solutions with prescribed energy 98
5.2 Approximate solutions with minimal energy 104
5.3 Regularization algorithms in the sense of Tikhonov 107
5.4 Regularization and filtering 113
5.5 The global point spread function: resolution and Gibbs oscillations 119
5.6 Choice of the regularization parameter 127

6 Iterative regularization methods **137**
6.1 The van Cittert and Landweber methods 137
6.2 The projected Landweber method 147
6.3 The projected Landweber method for the computation of constrained regularized solutions 154
6.4 The steepest descent and the conjugate gradient method 157
6.5 Filtering properties of the conjugate gradient method 165

7 Statistical methods **168**
7.1 Maximum likelihood (ML) methods 168
7.2 The ML method in the case of Gaussian noise 172
7.3 The ML method in the case of Poisson noise 175
7.4 Bayesian methods 183
7.5 The Wiener filter 184

PART 2
Linear inverse imaging problems **189**

8 Examples of linear inverse problems **191**
8.1 Space-variant imaging systems 191
8.2 X-ray tomography 194
8.3 Emission tomography 200
8.4 Inverse diffraction and inverse source problems 206
8.5 Linearized inverse scattering problems 214

9 Singular value decomposition (SVD) **220**
9.1 Mathematical description of linear imaging systems 220
9.2 SVD of a matrix 225
9.3 SVD of a semi-discrete mapping 231
9.4 SVD of an integral operator with square-integrable kernel 234
9.5 SVD of the Radon transform 240

10 Inversion methods revisited **247**
10.1 The generalized solution 247
10.2 The Tikhonov regularization method 253
10.3 Truncated SVD 256
10.4 Iterative regularization methods 259
10.5 Statistical methods 263

11 Fourier-based methods for specific problems **268**
11.1 The Fourier slice theorem in tomography 268
11.2 The filtered backprojection (FBP) method in tomography 272
11.3 Implementation of the discrete FBP 277
11.4 Resolution and super-resolution in image restoration 280
11.5 Out-of-band extrapolation 284
11.6 The Gerchberg method and its generalization 289

12 Comments and concluding remarks **295**
12.1 Does there exist a general-purpose method? 295
12.2 In praise of simulation 302

PART 3
Mathematical appendices **309**

A Euclidean and Hilbert spaces of functions **311**

B Linear operators in function spaces **317**

C Euclidean vector spaces and matrices **322**

D Properties of the DFT and the FFT algorithm **328**

E Minimization of quadratic functionals **335**

F Contraction and non-expansive mappings **339**

G The EM method **343**

References **346**

Index **347**
