Boca Raton London New York

A CRC title, part of the Taylor & Francis imprint, a member of the Taylor & Francis Group, the academic division of T&F Informa plc.

CONTENTS

1	WHY MICROWAVES?	1
1.1	Overview of Microwave Systems	2
1.1.1	Information from Passive Microwave Imagers	2
1.1.2	Information from Passive Microwave Sounders	2
1.1.3	Information from Active Microwave Instruments	3
1.1.4	How Can This Information be Used?	5
2	A BRIEF HISTORY OF MICROWAVES	7
2.1	In the beginning...	8
2.2	Out of the Darkness: Maxwell and Hertz	8
2.3	Radios, Death Rays and Radar	14
2.4	The Venus Ruler and Little Green Men	18
2.5	Imaging Radar	20
2.6	Microwave Remote Sensing from Space	21
2.7	Further Reading	22
3	PHYSICAL FUNDAMENTALS	23
3.1	Physical Properties of EM Waves	23
3.1.1	Electromagnetic Radiation as Waves	24
3.1.2	Complex Wave Description	28
3.2	Energy and Power of Waves	29
3.2.1	Polarisation	31

3.3	Combination of Waves	33
3.3.1	Coherence	34
3.4	The Most Important Section in This Book	37
3.4.1	Phase as a (Relative) Distance Measure	37
3.4.2	Combining Two Waves in 2-D	39
3.4.3	Quantifying the Interference Pattern	43
3.4.4	Passive Case	45
3.4.5	Multiple Source Interference Pattern	47
3.4.6	Beamwidth and Angular Resolution	48
3.4.7	Huygens' Wavelets	50
3.4.8	More on Coherence	51
3.5	Propagation of Microwaves	53
3.5.1	Through Lossy Media	55
3.5.2	Moving Sources	56
3.6	Where Do Microwaves Come From?	57
3.6.1	How Are They Produced in Nature?	57
3.6.2	Radiation Laws	60
3.6.3	How Are Microwaves Produced Artificially?	62
3.7	Further Reading	64
4	POLARIMETRY	65
4.1	Describing Polarised Waves	66
4.1.1	Summary of Linear Basis	67
4.2	Superposition of Polarised Waves	68
4.3	Representing Polarisation	73
4.3.1	Poincaré sphere	73
4.3.2	Mathematical Description	74
4.3.3	Stokes Vector	74
4.3.4	Brightness Stokes Vector	76
4.3.5	Partially Polarised Waves	76
4.3.6	The Stokes Scattering Matrix	78
4.3.7	The Scattering Matrix	80
4.3.8	Target Vector	80
4.3.9	Covariance Matrix	81

4.4	Passive Polarimetry	82
4.5	Polarimetry in Radar	82
4.5.1	Radar Polarimeters	82
4.5.2	Polarimetric Synthesis and Response Curves	83
4.6	Important Polarimetric Properties	85
4.6.1	Unpolarised Power	87
4.6.2	Degree of Polarisation and Coefficient of Variation	87
4.6.3	Polarimetric Ratios	88
4.6.4	Coherent Parameters	89
4.6.5	Polarimetric Decomposition	90
4.7	Further Reading	91
5	MICROWAVES IN THE REAL WORLD	93
5.1	Continuous Media and the Atmosphere	93
5.1.1	Radiative Transfer Theory	94
5.1.2	Microwave Brightness Temperature	96
5.1.3	Spectral Lines	98
5.1.4	Line Broadening	100
5.1.5	Faraday Rotation	101
5.2	Interaction With Discrete Objects	102
5.2.1	Diffraction	103
5.2.2	Importance of Diffraction	104
5.2.3	Scattering	105
5.2.4	Radar Cross-section	106
5.2.5	Importance of Scattering Theory	110
5.3	Scattering and Emission from Volumes	112
5.3.1	Transmission Through Volumes	113
5.3.2	Emission	114
5.3.3	Scattering	116
5.4	Reflection and Emission from Smooth Surfaces	118
5.4.1	Scattering from Smooth Boundaries	120
5.4.2	Emission from Smooth Boundaries	123

5.4.3	Summary	124
5.5	Scattering and Emission from Rough Surfaces	124
5.5.1	Definition of "Rough"	124
5.5.2	Effects of Roughness	125
5.5.3	Summary	126
5.6	Non-Random (Periodic) Surfaces	127
5.7	Scattering and Emission from Natural Surfaces	128
5.7.1	Oceans and Lakes	129
5.7.2	Hydrometeors	132
5.7.3	Ice and Snow	133
5.7.4	Freshwater Ice	134
5.7.5	Glacial Ice	135
5.7.6	Sea Ice	136
5.7.7	Bare Rock and Deserts	138
5.7.8	Soils	139
5.7.9	Vegetation	142
5.8	Special Scatterers	144
5.8.1	Corner Reflectors	144
5.8.2	Moving Targets	146
5.8.3	Mixed Targets	147
5.9	Further Reading	149
6	DETECTING MICROWAVES	151
6.1	General Approach	151
6.2	Conceptual Approach to Microwave Systems	153
6.2.1	A Word of Warning	154
6.3	Basic Microwave Radiometer	154
6.4	The Antenna	154
6.4.1	Parabolic Antennas	155
6.4.2	The Dipole Antenna	157
6.4.3	Array Antennas	159

6.4.4	Antenna Properties	160
6.5	The Receiver	163
6.5.1	Detector	165
6.6	Coherent Systems	165
6.7	Active Systems	166
6.8	System Performance	167
6.8.1	Noise and Sensitivity	167
6.8.2	Sensitivity Considerations for Receivers	167
6.8.3	Other Sources of Uncertainty	169
6.9	Calibration	169
6.9.1	Antenna Calibration	172
6.9.2	Verification and Validation	173
6.9.3	Types of Calibration	173
6.9.4	Strategies for Calibrating Receivers	175
6.10	Final Remarks on Calibration	176
6.11	Further Reading	177
7	ATMOSPHERIC SOUNDING	179
7.1	Atmospheric Sounding	180
7.1.1	The Need for Measurements	180
7.1.2	The Earth's Atmosphere	181
7.1.3	Water Vapour and Oxygen	182
7.1.4	Clouds and Precipitation	183
7.1.5	Ozone	183
7.1.6	Chlorine Monoxide	184
7.1.7	Other Relevant Measurements	184
7.2	Principles of Measurement	184
7.3	Theoretical Basis of Sounding	186
7.3.1	The Forward Model	186
7.3.2	Simple Formulation of the Forward Model	188
7.3.3	The Inverse Model	189
7.3.4	Solving the Inverse Problem	191

7.3.5	The Influence Functions	194
7.4	Viewing Geometries	195
7.4.1	Nadir Sounding	195
7.4.2	Limb Sounding	197
7.5	Passive Rainfall Mapping	200
7.5.1	The Need for Measurements	200
7.5.2	Principles of Measurement	200
7.5.3	Emission Method	201
7.5.4	Scattering Method	201
7.6	Further Reading	202
8	PASSIVE IMAGING	205
8.1	Principles of Measurement	206
8.1.1	Background	206
8.1.2	Practical Radiometers	206
8.1.3	Viewing Geometries	207
8.1.4	The Generic Forward Model	207
8.2	Oceans	209
8.2.1	The Need for Measurements	209
8.2.2	Principles of Measurement: SST	211
8.2.3	Principles of Measurement: Ocean Salinity	212
8.2.4	Principles of Measurement: Ocean Winds	213
8.3	Sea Ice	213
8.3.1	The Need for Measurements	213
8.3.2	Sea Ice Concentration	214
8.4	Land	217
8.4.1	The Need for Measurements	217
8.4.2	The Forward Problem Over Land	218
8.4.3	Empirical Approaches to Snow Depth	219
8.4.4	A Final Comment on Passive Polarimetry	220
8.5	Further Reading	220
9	ACTIVE MICROWAVES	221

9.1 Principles of Measurement	222
9.1.1 What is RADAR?	223
9.1.2 Basic Radar Operation	224
9.2 The Generic Equations of Radar Performance	225
9.2.1 The Radar Equation	225
9.2.2 Range resolution	227
9.3 Radar Altimeters	231
9.3.1 The Need for Altimeter Measurements	232
9.3.2 Altimeter Geometry	235
9.3.3 Instrumentation	236
9.3.4 Echo Shape Analysis	237
9.3.5 Range Ambiguity	241
9.3.6 Accuracy of Height Retrievals	243
9.3.7 Scanning Altimeters	245
9.3.8 Calibration and Validation	246
9.4 Improving Directionality	247
9.4.1 Sub-Beamwidth Resolution	248
9.4.2 Synthetic Aperture Altimeters	249
9.5 Scatterometers	250
9.5.1 The Need for Scatterometer Measurements	251
9.5.2 General Operation	252
9.5.3 Rain Radar	253
9.5.4 Windscatterometers	254
9.5.5 Polarimetric Scatterometers	257
9.6 Further Reading	257
10 IMAGING RADAR	259
10.1 The Need for Imaging Radar	259
10.1.1 Oceans	260
10.1.2 Sea Ice	261
10.1.3 Terrestrial Surfaces	262
10.1.4 The Water Cloud Model for Vegetation	263
10.1.5 Other Uses of Radar Imagery	264

10.2	What is an Image?	265
10.3	Radar Image Construction	267
10.4	Side-Looking Airborne Radar	268
10.4.1	Ground Range resolution	269
10.4.2	Azimuth Resolution	270
10.5	Synthetic Aperture Radar (SAR)	271
10.5.1	Aperture Synthesis: A Doppler Interpretation	271
10.5.2	Aperture Synthesis: A Geometric Explanation	275
10.5.3	Geometry vs Doppler	278
10.5.4	SAR Focussing	280
10.6	Radar equation for SAR	280
10.7	Geometric Distortions in Radar Images	281
10.7.1	Lay-over and Foreshortening	281
10.7.2	Radar Shadow	282
10.7.3	Motion Errors	283
10.7.4	Moving Targets	284
10.8	Operational Limits	284
10.8.1	Ambiguities	285
10.8.2	Coverage vs PRF	286
10.9	Other SAR Modes	287
10.9.1	ScanSAR Operation	287
10.9.2	Spotlight Mode	287
10.10	Working With SAR Images	287
10.10.1	Speckle	289
10.10.2	Speckle Statistics	292
10.10.3	Speckle Filtering	296
10.10.4	Geometric Correction	297
10.10.5	Limitations of Geometric Correction	299
10.11	SAR Data Formats	300
10.12	Extracting Topography from SAR Images	301
10.12.1	Stereo SAR Radargrammetry	302

10.12.2	SAR Clinometry	302
10.13	Further Reading	303
11	INTERFEROMETRY	305
11.1	The Need for Interferometric Measurements	305
11.2	Principles of Interferometry	306
11.2.1	Phase Measurements	306
11.2.2	Application of Dual Systems	307
11.2.3	Interferometry for Resolving Direction	309
11.3	Passive Imaging Interferometry	310
11.4	Radar Interferometry	312
11.4.1	Interferometric Altimetry	312
11.4.2	Interferometric SAR	313
11.4.3	InSAR Viewing Geometries	315
11.4.4	Interferometric Coherence Magnitude	325
11.4.5	Decorrelation	327
11.4.6	Summary of Decorrelation	329
11.5	Practical DEM Generation	331
11.5.1	InSAR Processing Chain	332
11.6	Vegetation Height Estimation	333
11.6.1	Single Frequency	334
11.6.2	Dual-Frequency	334
11.6.3	Polarimetric Interferometry and Multibaseline Interferometry	335
11.6.4	SAR Tomography	335
11.7	Differential SAR Interferometry	336
11.7.1	Considerations and Limitations	338
11.7.2	Atmospheric Water Vapour	339

11.8 Permanent Scatterer Interferometry	340
11.9 Along-Track Interferometry	341
11.10 Further Reading	342
A Summary of Useful Mathematics	343
A.1 Angles	343
A.1.1 Degrees	343
A.1.2 Radians	343
A.1.3 Steradian (solid angle)	344
A.2 Some Useful Trigonometric Relations	344
A.3 Logs and Exponentials	344
A.3.4 Some Fundamental Properties	345
A.3.5 Special values	345
A.3.6 Series Expansions	346
A.4 Complex Numbers	346
A.5 Vectors	349
A.5.7 Law of Vector Algebra	349
A.5.8 Cross or Vector Product	349
A.6 Matrices	350
A.6.9 Matrix Algebra	352
bibliography	353
index	357
