CONTENTS

Preface	xiii
Chapter 1 The Nature of High-Frequency Methods	1
1.1 Introduction	1
1.2 A Brief Historical Overview	2
1.3 High-Frequency Phenomena	5
References	6
Chapter 2 Geometrical Optics Fields	7
2.1 Introduction	7
2.2 Ray Optical Construction of the High-Frequency Field	8
2.2.1 Preliminary Remarks	8
2.2.2 Some Conventional Electromagnetic Theory	8
2.2.3 The Luneberg-Kline Anticipated Solution (Ansatz)	10
2.2.4 The Eikonal Equation	11
2.2.5 The Transport Equations	15
2.2.6 The Geometrical Optics Terms and Their Interpretation	17
2.2.7 Ray Paths, Amplitude Functions, and Phase Functions	19
2.2.8 Sign Conventions and Caustics of the Geometrical Optics Fields	28
2.2.9 The Geometrical Optics Field and Fermat's Principle	33
2.3 Summary of the Properties of a High-Frequency Field and Some Special Cases	34
2.4 Specific Examples of Geometrical Optics Fields	37
2.4.1 Initial Comments and Some Definitions	37
2.4.2 Uniform Plane Wave Fields	37
2.4.3 The Fields of Electric and Magnetic Line Sources	40
2.4.4 The Fields of a Hertzian Dipole	42
2.4.5 The Far-Zone Fields of Horn Antennas	43
2.4.6 The Fields of a Piecewise-Sinusoidal Dipole	46

2.4.7	Sources with Fields That Are Not Geometrical Optics or Ray-Optic Fields	48
2.4.8	Further Comment	48
2.5	Reduction of Results to Two-Dimensional Ray Tubes	48
2.6	Rays in Lossy Media	52
2.7	Concluding Remarks	52
2.8	A Taste of Things to Come	53
	Problems	57
	References	58
Chapter 3	Geometrical Optics Reflected Fields	61
3.1	Introduction	61
3.1.1	Initial Remarks	61
3.1.2	A Stroll in the Sun	61
3.1.3	A Strategy for This Chapter	63
3.2	The Law of Reflection, Polarization Propertjes, and Phase Functions	66
3.2.1	The Definition of Certain Geometrical Terms and Coordinate Systems	66
3.2.2	The Law of Reflection	70
3.2.3	Trajectories of Reflected Rays	74
3.2.4	Polarization of Reflected Rays	75
3.2.5	Phase Continuation along Reflected Rays	77
3.2.6	Invocation of the Locality Principle	78
3.2.7	More about Shadowing	78
3.2.8	Geometrical Optics Surface Currents	81
3.2.9	An Alternative Interpretation of the Form of \mathbf{R} and the Law of Reflection	82
3.2.10	What More Do We Need?	83
3.3	The Expressions for the Geometrical Optics Field Reflected from Smooth Conducting Surfaces: Two-Dimensional Problems	84
3.3.1	When Is a Problem of a Two-Dimensional Nature?	84
3.3.2	Description of the Two-Dimensional Reflecting Surface Geometry	86
3.3.3	Simplifications for Two-Dimensional Problems	86
3.3.4	Simplification of the Polarization Description of Reflected GO Fields for Two-Dimensional Problems	86
3.3.5	Amplitude Continuation along Two-Dimensional Reflected Ray Tubes	88
3.3.6	The Classical Geometrical Optics Interpretation	91
3.3.7	Summary of Reflected Field Expressions for Two-Dimensional Problems	93

3.3.8	On the Specular Point Q_r and Its Location	96
3.3.9	Initial Two-Dimensional Problem Examples	97
3.3.10	Interpretation in Terms of Fundamental Electromagnetic Theory	116
3.3.11	Relationship to Physical Optics	117
3.3.12	Comments on GO Reflected Fields about Shadow Boundaries	120
3.4	Further Examples of Two-Dimensional Reflected Field Problems	121
3.5	General Expressions for the Reflected Fields from Three-Dimensional Smooth Conducting Surfaces	131
3.5.1	Introduction	131
3.5.2	Principal Radii of Curvature of Reflected Ray Tube at Q_r —First Format	134
3.5.3	Principal Radii of Curvature of Reflected Ray Tube at Q_r —Second Format	135
3.5.4	Important Special Cases	136
3.5.5	Principal Directions of the Reflected Wavefront	138
3.5.6	Alternative Form for the Reflected GO Field at the Specular Point Q_r	140
3.5.7	Comments on the Expressions for the Reflected GO Field	142
3.5.8	Alternative Determination of Principal Radii of Curvature of the Reflected Wavefront	144
3.6	Examples of Three-Dimensional Reflected Field Problems	145
3.7	Concluding Remarks	154
	Problems	156
	References	157
Chapter 4	Two-Dimensional Wedge Diffraction	159
4.1	Introduction	159
4.2	Diffraction by Huygens' Principle	163
4.3	Keller's Original GTD	165
4.4	The Uniform Theory of Diffraction	174
4.4.1	Shadow Boundaries	175
4.4.2	Two-Dimensional UTD Diffraction Coefficients	179
4.4.3	Enforcing Continuity across the Shadow Boundaries	191
4.4.4	Transition Regions	197
4.4.5	Grazing Incidence	203
4.4.6	Half-Plane and Curved Screen	205
4.4.7	Continuity across the Shadow Boundary: Grazing Incidence	206
4.4.8	Full-Plane	218

4.5	Slope Diffraction	220
4.6	General Two-Dimensional Edge Diffracted Fields	225
4.7	Dielectric and Impedance Wedges	227
Problems		228
References		231
Chapter 5	Applications of Two-Dimensional Wedge Diffraction	235
5.1	Radiation from a Parallel Plate Waveguide with TEM Mode Propagation, Terminated in an Infinite Ground Plane	235
5.2	Antenna Gain	238
5.3	Radiation from an <i>E</i> -Plane Horn Antenna	240
5.4	Radiation from an <i>H</i> -Plane Horn Antenna	244
5.5	Radar Width of a Two-Dimensional Structure	248
Problems		257
References		260
Chapter 6	Three-Dimensional Wedge Diffraction and Corner Diffraction	263
6.1	Introduction	263
6.2	Edge-Fixed Coordinate System	265
6.3	Three-Dimensional UTD Diffraction Coefficients	268
6.4	Examples of Three-Dimensional Wedge Diffraction	274
6.5	Corner Diffraction	288
6.5.1	Corner Diffraction from a Flat Plate	288
6.5.2	Corner Diffraction from a Vertex in Which Wedges with Arbitrary Wedge Angles Are Terminated	298
6.6	Alternative Forms of the Diffraction Coefficients	300
Problems		301
References		304
Chapter 7	Equivalent Currents	305
7.1	Introduction	305
7.2	Equivalent Currents for Edge Diffraction	306
7.3	Radiation From Equivalent Currents	312
7.4	Reflected Fields Using Equivalent Currents	322
Problems		327
References		328
Chapter 8	Diffraction at a Smooth Convex Conducting Surface	331
8.1	The Phenomenon of Creeping Waves, or Curved Surface Diffraction	331
8.1.1	Introduction	331
8.1.2	Asymptotic Evaluation of Eigenfunction Solutions for Line Source Illumination of a Conducting Circular Cylinder	332

8.1.3	Interpretation of the Asymptotic Solution in Terms of Surface Rays	335
8.1.4	Invocation of Locality and the Generalized Fermat Principle	336
8.1.5	The Significance of the UTD Results for Diffraction by Smooth Convex Surfaces	341
8.1.6	Problem Classes for Curved-Surface Diffraction	343
8.1.7	Differential Geometry for 2D Curved-Surface Diffraction	344
8.2	The Two-Dimensional Scattering Formulation	344
8.2.1	The Scattering Problem Geometry	344
8.2.2	UTD Scattering Solution in the Lit Region	345
8.2.3	UTD Scattering Solution in the Shadow Region	350
8.2.4	Field Continuity at the SSB	356
8.2.5	UTD Scattering Solution in the Surface-Based Ray Coordinate System	370
8.3	The Radiation Problem for a Source Mounted on a Smooth Convex Conducting Surface	374
8.3.1	The Radiation Problem Geometry	374
8.3.2	Sources of the Radiated Fields	375
8.3.3	UTD Solution for the Radiation Problem: Observation Point in the Lit Zone	377
8.3.4	UTD Solution for the Radiation Problem: Observation Point in the Shadow Zone	381
8.3.5	Noninfinitesimal Sources	385
8.3.6	Deep Shadow Zone Field Expressions and Their Interpretation	387
8.4	The Two-Dimensional Convex Conducting Surface Coupling Problem	401
8.4.1	Detailed Geometry for the Coupling Problem	401
8.4.2	Preliminaries	401
8.4.3	UTD Coupling Solution for Magnetic Current Sources	402
8.4.4	UTD Coupling Solution for Electric Current Sources	403
8.4.5	Special Geometries	403
8.4.6	A Form of the Coupling Solution in the Deep Shadow Region and Its Interpretation	405
8.5	Bibliographic Remarks	408
	Problems	409
	References	410
	Appendix A Unit Vectors	413
A.1	Cartesian Coordinate System	413
A.2	Spherical Coordinate System	413
A.3	Cylindrical Coordinate System	414

Appendix B	Special Functions for the Uniform Geometrical Theory of Diffraction	417
B.1	Introduction	417
B.2	The Fresnel Integrals and Transition Function	418
B.3	Bessel and Hankel Functions	420
B.4	The Airy Functions	422
B.5	The Fock Scattering Functions	424
B.6	The Fock Radiation Functions	428
B.7	The Fock Coupling Functions	430
B.8	Concluding Remarks	432
References		432
Appendix C	Differential Geometry	435
C.1	Curves	435
C.2	Surfaces	440
C.2.1	Unit Vector Normal to a Surface	440
C.2.2	Radius of Curvature of a Surface	442
References		449
Appendix D	The Method of Stationary Phase	451
D.1	Introduction	451
D.2	The Method of Stationary Phase	452
D.3	Bibliographical Remarks	456
References		457
Appendix E	Additional References	459
Appendix F	Computer Subroutine Listings	465
F.1	Fresnel Integrals	465
F.2	Transition Function	465
F.3	Wedge-Diffraction Coefficient	466
F.4	Wedge-Slope-Diffraction Coefficient	466
F.5	Fock Scattering Functions	467
F.6	Universal Fock Radiation Functions	467
F.7	Fock Coupling Functions	467
References		467
Index		469
