CONTENTS

CHAPTER 1 INTRODUCTION TO THERMAL AND FLUIDS ENGINEERING 1

- 1.1 Overview of Thermal and Fluids Systems 1
- 1.2 Thermal and Fluids Systems Analysis and Engineering 5
- 1.3 Thermodynamics 6
- 1.4 Heat Transfer 11
- 1.5 Fluid Mechanics 14
 - Summary 18
 - Selected References 18
 - Problems 18

CHAPTER 2 THE FIRST LAW 20

- 2.1 The First Law of Thermodynamics 20
- 2.2 Heat Transfer 30
- 2.3 Internal Energy 30
- 2.4 Specific Heat of Ideal Liquids and Solids 31
- 2.5 Fundamental Properties 34
 - 2.5.1 Density 35
 - 2.5.2 Pressure 36
 - 2.5.3 Temperature 37
- 2.6 Ideal Gases 40
- 2.7 Unit Systems 44
- 2.8 Work 47
 - 2.8.1 Compression and Expansion Work 48
 - 2.8.2 Electrical Work 52
 - 2.8.3 Shaft Work 54
- 2.9 Kinetic Energy 56
- 2.10 Potential Energy 57
- 2.11 Specific Heat of Ideal Gases 58
- 2.12 Polytropic Process of an Ideal Gas 68
- 2.13 The First Law in Differential Form 75
- 2.14 The "Pizza" Procedure for Problem Solving 77
 - Summary 80
 - Selected References 82
 - Problems 82

CHAPTER 3 THERMAL RESISTANCES 87

- 3.1 The First Law as a Rate Equation 87
- 3.2 Conduction 89
- 3.3 Radiation 93
- 3.4 Convection 95
- 3.5 The Resistance Analogy for Conduction and Convection 97
- 3.6 The Lumped System Approximation 105

- 3.7 The Resistance Analogy for Radiation 112
- 3.8 Combined Thermal Resistances 117
 - Summary 120
 - Selected References 121
 - Problems 121

CHAPTER 4 FUNDAMENTALS OF FLUID MECHANICS 128

- 4.1 Introduction 128
- 4.2 Fluid Statics 128
 - 4.2.1 Pressure in a Fluid at Rest 129
 - 4.2.2 Pressure in a Static Compressible Fluid (web) 140
 - 4.2.3 Forces on Submerged Plane Surfaces 140
 - 4.2.4 Forces on Submerged Curved Surfaces (web) 147
 - 4.2.5 Buoyancy 147
- 4.3 Open and Closed Systems 154
- 4.4 Conservation of Mass for an Open System 156
- 4.5 Conservation of Energy for an Open System 164
- 4.6 The Bernoulli Equation 171
- 4.7 Flow Measurement (web) 175
- 4.8 Conservation of Linear Momentum for an Open System 176
 - Summary 183
 - Selected References 184
 - Problems 184

CHAPTER 5 THERMODYNAMIC PROPERTIES 192

- 5.1 Introduction 192
- 5.2 Properties of Pure Substances 192
- 5.3 Internal Energy and Enthalpy in Two-Phase Systems 204
- 5.4 Properties of Real Liquids and Solids 216
- 5.5 The State Principle 220
- 5.6 Use of Tables to Evaluate Properties 221
- 5.7 Real Gases and Compressibility (web) 223
 - Summary 223
 - Selected References 224
 - Problems 224

CHAPTER 6 APPLICATIONS OF THE ENERGY EQUATION TO OPEN SYSTEMS 228

- 6.1 Introduction 228
- 6.2 Nozzles and Diffusers 228
- 6.3 Turbines 230

X CONTENTS

- 6.4 Compressors, Blowers, Fans, and Pumps **238**
- 6.5 Throttling Valves **243**
- 6.6 Mixing Chambers **245**
- 6.7 Heat Exchangers **247**
- 6.8 Transient Processes (web) **252**
 - Summary **252**
 - Selected References **252**
 - Problems **253**

CHAPTER 7 THERMODYNAMIC CYCLES AND THE SECOND LAW **257**

- 7.1 Introduction **257**
- 7.2 Thermodynamic Cycles **257**
- 7.3 The Carnot Cycle and the Second Law of Thermodynamics **264**
- 7.4 The Thermodynamic Temperature Scale **273**
- 7.5 Reversible Refrigeration Cycles **274**
- 7.6 Entropy **276**
- 7.7 Comparison of Entropy and Internal Energy **281**
- 7.8 Reversible and Irreversible Processes **282**
- 7.9 The Temperature-Entropy Diagram **283**
- 7.10 Entropy Change of Ideal Gases **288**
- 7.11 Entropy Balances for Open and Closed Systems **295**
- 7.12 Second Law Analysis of Turbines, Pumps, and Compressors **299**
- 7.13 Maximum Power Cycle **309**
 - Summary **311**
 - Selected References **314**
 - Problems **314**

CHAPTER 8 REFRIGERATION, HEAT PUMP, AND POWER CYCLES **318**

- 8.1 Introduction **318**
- 8.2 Vapor-Compression Refrigeration Cycles **318**
- 8.3 Heat Pumps **326**
- 8.4 The Rankine Cycle **330**
- 8.5 The Rankine Cycle with Reheat and Regeneration **344**
- 8.6 The Brayton Cycle **359**
- 8.7 The Brayton Cycle With Regeneration (web) **371**
- 8.8 Combined Cycles and Cogeneration (web) **372**
- 8.9 Otto and Diesel Cycles **372**
 - Summary **382**
 - Selected References **384**
 - Problems **384**

CHAPTER 9 INTERNAL FLOWS **398**

- 9.1 Introduction **398**
- 9.2 Viscosity **398**

- 9.3 Fully Developed Laminar Flow in Pipes **403**
- 9.4 Laminar and Turbulent Flow **410**
- 9.5 Head Loss **415**
- 9.6 Fully Developed Turbulent Flow in Pipes **420**
- 9.7 Entrance Effects **424**
- 9.8 Steady-flow Energy Equation **425**
- 9.9 Minor Losses **430**
- 9.10 Pipeline Networks (web) **436**
- 9.11 Pump Selection (web) **436**
 - Summary **436**
 - Selected References **437**
 - Problems **438**

CHAPTER 10 EXTERNAL FLOWS **446**

- 10.1 Introduction **446**
- 10.2 Boundary Layer Concepts **447**
- 10.3 Drag on a Flat Plate **450**
- 10.4 Drag and Lift Concepts **458**
- 10.5 Drag on Two- and Three-Dimensional Bodies **468**
- 10.6 Lift **477**
- 10.7 Momentum-Integral Boundary Layer Analysis (web) **483**
 - Summary **483**
 - Selected References **484**
 - Problems **484**

CHAPTER 11 CONDUCTION HEAT TRANSFER **490**

- 11.1 Introduction **490**
- 11.2 The Heat Conduction Equation **491**
- 11.3 Steady One-Dimensional Conduction **496**
- 11.4 Steady Multidimensional Conduction **506**
- 11.5 Lumped System Analysis for Transient Conduction **511**
- 11.6 One-Dimensional Transient Conduction **514**
- 11.7 Multidimensional Transient (Conduction) **529**
- 11.8 Extended Surfaces **535**
- 11.9 Contact Resistance **546**
 - Summary **549**
 - Selected References **551**
 - Problems **551**

CHAPTER 12 CONVECTION HEAT TRANSFER **561**

- 12.1 Introduction **561**
- 12.2 Forced Convection in External Flows **562**
- 12.3 Laminar Convection in Pipes **577**
- 12.4 Turbulent Convection in Pipes **588**
- 12.5 Internal Flow with Constant Wall Temperature **589**
- 12.6 Noncircular Conduits **598**
- 12.7 Entrance Effects in Forced Convection **598**

12.8	Natural Convection Over Surfaces	601
12.9	Natural Convection in Vertical Channels (web)	606
12.10	Natural Convection in Enclosures (web)	606
12.11	Mixed Forced and Natural Convection (web)	606
12.12	Dimensional Similitude	606
12.13	General Procedure For Evaluating Heat Transfer Coefficients	607
	Summary	608
	Selected References	611
	Problems	611

CHAPTER 13 HEAT EXCHANGERS 619

13.1	Introduction	619
13.2	The Overall Heat Transfer Coefficient	623
13.3	The <i>LMTD</i> Method	628
13.4	The "Effectiveness- <i>NTU</i> " Method	637
13.5	Heat Exchanger Selection Considerations	655
	Summary	657
	Selected References	658
	Problems	658

CHAPTER 14 RADIATION HEAT TRANSFER 666

14.1	Introduction	666
14.2	Fundamental Laws of Radiation	667
14.3	View Factors	679
14.4	Shape Decomposition	687
14.5	Radiative Exchange Between Black Surfaces	690

14.6	Radiative Exchange Between Diffuse, Gray Surfaces	693
14.7	Two-Surface Enclosures	697
14.8	Three-Surface Enclosures	701
14.9	Variation of Thermophysical Properties with Wavelength and Direction (web)	706
	Summary	706
	Selected References	707
	Problems	707

CHAPTER 15 IDEAL GAS MIXTURES AND COMBUSTION (WEB)

15.1	Introduction (web)
15.2	Ideal Gas Mixtures (web)
15.3	Psychrometrics (web)
15.4	Combustion (web)
	Summary (web)
	Selected References (web)
	Problems (web)

APPENDIX A TABLES IN SI UNITS 713
APPENDIX B TABLES IN BRITISH UNITS 745
APPENDIX C ANSWERS TO SELECTED PROBLEMS 774
INDEX 779
