# Contents

Preface	xi
Part I Introduction. Problem Description	
1. DIRECT AND INVERSE PROBLEMS	3
1.1 Introduction	3
1.2 Direct nonsmooth mechanics problems	3
1.3 Inverse and identification problems	4
1.4 Recent results and future work	5
References	
Part II Theoretical and Computational Tools	
2. COMPUTATIONAL MECHANICS	11
2.1 Elastostatics	11
2.1.1 Small displacement smooth (classical) elastostatics.	12
2.1.2 Unilateral contact problems.	15
2.1.2.1 The unilateral contact conditions	19
2.1.3 Friction problems with convex energy potential	21
2.1.3.1 Combined frictional contact problem	23
2.1.4 BEM formulation and implementation	24
2.1.4.1 BEM formulation of unilateral problems	24
2.1.4.2 LCP-BEM static unilateral-frictional contact problems	26
2.1.4.3 Multi-region BEM formulation for inequality problems	27
2.1.4.4 Unified LCP formulation of combined unilateral frictional contact problems	29
2.2 Solution algorithms	32
2.2.1 Smooth and nonsmooth optimization approach	32
2.2.2 QPP and LCP solution schemes	34
2.2.3 Nonlinear equations for complementarity problems	34
2.2.3.1 Nonlinear equation reformulation	36

	2.2.3.2	Examples of NCP functions	36
	2.2.3.3	Merit functions	37
	2.2.3.4	Solution technique	37
	2.2.3.5	Formulation of nonlinear equations with FEM and BEM	38
	2.2.3.6	NCP functions proposed in the engineering literature	40
2.3		Elastodynamics	41
	2.3.1	Steady state, harmonic problems	41
	2.3.2	Transient elastodynamics	43
	2.3.2.1	LCP-BEM dynamic unilateral-frictional contact problems	45
References			
3.		COMPUTATIONAL AND STRUCTURAL OPTIMIZATION	55
	3.1	Optimization and optimality conditions	55
	3.1.1	Smooth, inequality constrained, convex problems	58
	3.1.1.1	Lagrangians, saddle points, duality	59
	3.1.1.2	Concise form of optimality conditions	61
	3.1.2	Convex, nonsmooth optimization	62
	3.1.2.1	Unconstrained	62
	3.1.2.2	Constrained	62
	3.1.3	Convex optimization algorithms	63
	3.1.3.1	Smooth Unconstrained Problems	63
	3.1.3.2	Constrained Problems	64
	3.1.3.3	Nonsmooth Problems	67
	3.2	Optimization under equilibrium constraints (MPEC)	68
	3.2.1	Formulation	69
	3.2.2	Examples of structural optimization	71
	3.2.2.1	Optimal design for structures	71
	3.2.2.2	Optimal design for unilateral structures	71
	3.2.2.3	Optimal prestress of unilateral Structures	72
	3.2.2.4	Geometry design, inverse or identification problem	73
	3.2.2.5	Nonsmoothness and nonconvexity in MPEC	74
	3.2.3	Solution methods	76
	3.2.3.1	Error minimization with regularization	76
	3.2.3.2	Error minimization - regularization - nonlinear equation approach	77
	3.2.3.3	Error minimization - penalty formulation	77
	3.2.3.4	Error minimization - regularization - nonlinear equation approach - penalty formulation	78
	3.2.3.5	Further numerical approaches	78
References			
4.		SELECTED SOFT COMPUTING TOOLS	85
	4.1	Soft-computing versus classical computing	85
	4.2	Neural networks	86
	4.2.1	Backpropagation neural network model	86

4.2.2	Neural network mappings, motivation and application on inverse problems	89
4.3	Genetic algorithms	92
4.4	Fuzzy and neuro-fuzzy inference	95
4.5	Classical and extended Kalman filter and identification	96
4.5.1	Review	96
4.5.2	Description	97
References		

Part III Applications to Inverse Problems

5.	STATIC PROBLEMS	107
5.1	Introduction and literature survey	107
5.2	Output error formulation of the inverse problem	110
5.2.1	Local optimization approach	112
5.2.2	Neural network solution method	112
5.3	Numerical examples of direct problems	114
5.3.1	Static unilateral crack analysis	118
5.4	Numerical examples of inverse problems	124
5.4.1	Flaw identification	124
5.4.2	Bilateral and unilateral crack identification through error optimization	133
5.4.3	Classical and unilateral neural crack identification	135
5.4.4	Filter-driven iterative crack identification	147
References		
6.	STEADY-STATE DYNAMICS	157
6.1	Introduction and literature survey	157
6.2	Output error formulation of the inverse problem	159
6.3	Neural network solution of the Inverse Problem	160
6.4	Numerical examples	161
6.4.1	Flaw identification	161
6.4.2	Crack identification	168
6.4.2.1	Direct problem	168
6.4.2.2	Inverse problem	171
References		
7.	TRANSIENT DYNAMICS	187
7.1	Introduction and literature survey	187
7.2	Numerical examples of direct problems	189
7.3	Numerical examples of inverse problems	202
7.3.1	Classical and unilateral impact-echo	202
7.3.1.1	Outline of the method	202
7.3.1.2	Numerical comparison	203
7.3.2	Impact-echo and neural identification	204
References
