Knots and Surfaces

N. D. Gilbert

Department of Mathematics
Heriot-Watt University, Edinburgh

T. Porter

School of Mathematics,
University College of North Wales, Bangor

OXFORD NEW YORK TOKYO
OXFORD UNIVERSITY PRESS

Contents

1. Knots, links, and diagrams **1**

1.1 Knot and link diagrams 1
1.2 Isotopy and the Reidemeister moves 5
1.3 3-colouring 8
1.4 Numerical invariants 11
1.5 Chiral and invertible knots 15

2. Knot and link polynomials **19**

2.1 State models and the Jones polynomial 19
2.2 The Jones polynomial 28
2.3 Applications of the Kauffman polynomial 30
2.4 The oriented or Homfly polynomial 34
2.5 The Alexander polynomial 38

3. Topological spaces **42**

3.1 Topological spaces 42
3.2 Continuity 45
3.3 Connectedness 48
3.4 Identification spaces 49
3.5 Knots and isotopy 51

4. Surfaces **55**

4.1 Combinatorial surfaces 57
4.2 Cutting and pasting 68
4.3 Invariants of surfaces: orientability and boundary curves 80
4.4 Invariants of surfaces: Euler characteristic and genus 84
4.5 Knots and surfaces 90

5. The arithmetic of knots **96**

5.1 The sum of oriented knots 96
5.2 Genus of $K + L$ 100

5.3 Bridge number of $K + L$ 103
5.4 Factorizations, prime knots, and the factorization theorem 105
5.5 n-colourability 107
5.6 Polynomials and the sum of knots 108

6. Presentations of groups 111
6.1 Examples of presentations 111
6.2 Dihedral groups 115
6.3 Cayley quivers 118
6.4 Free groups 122
6.5 Presentations 129
6.6 Tietze transformations 131
6.7 Quotient groups 138
6.8 Abelianization 139
6.9 Finitely generated Abelian groups 140
6.10 Pushouts of groups 144
6.11 Knot groups 150

7. Graphs and trees 163
7.1 Graphs, quivers, and trees 163
7.2 Examples of graphs 169
7.3 Planar graphs 171
7.4 Embedding graphs in surfaces 173

8. Alexander matrices and Alexander polynomials 178
8.1 Group rings 178
8.2 Derivatives 182
8.3 The Alexander matrix 184
8.4 Elementary ideals 187
8.5 Alexander polynomials via the Wirtinger presentation 192

9. The fundamental group 197
9.1 Paths 197
9.2 Homotopy 199
9.3 Calculations of the fundamental group 203
9.4 Homotopy equivalence 208

10. Van Kampen's theorem 212

11. Applications of the Van Kampen theorem **224**

11.1 Calculations of fundamental groups 224
11.2 Surface groups 233
11.3 Spaces with finite cyclic fundamental group 236
11.4 Spaces with given fundamental group 237
11.5 The group of a knot 239
11.6 Torus knots 243
11.7 Analysis of the knot group $G_{m,n}$ 246

12. Covering spaces **250**

12.1 Covering maps and covering spaces 250
12.2 Deck transformations and universal covers 258
12.3 Covering graphs 259

Bibliography **264**

Index **266**
