KNOWLEDGE AND REGULATORY PROCESSES
IN HEALTH AND EDUCATION POLICIES

João Barroso is full professor in the Institute of Education - University of Lisbon, where he carries out research and teaching in the field of Education Policy and Administration. He has coordinated two Portuguese teams participating in European Union' funded research projects (fifth and sixth Framework Programme for Research): Reguleducnetwork - "*Changes in regulation modes and social production of inequalities in education systems: a European Comparison*" (2001-2004) and Knowandpol - "*The role of Knowledge in the construction and regulation of health and education policy in Europe: convergences and specificities among nations and sectors*" (2006-2011).

Luís Miguel Carvalho is associate professor in the Institute of Education - University of Lisbon. In the context of the Knowandpol project, he coordinated a study on the fabrication of OECD's PISA and was co-author of an integrative report on the role of knowledge-based tools in education and health policies. His research work is now concerned with the transnational circulation of knowledge and policies, and the role of intermediary actors in public policies.

This book is one of many publications that result from research carried out, between 2006 and 2011, by several teams of researchers involved in the KNOWandPOL - "The role of knowledge in the construction and regulation of health and education policy in Europe: convergences and specificities among nations and sectors" - project. Entitled *Knowledge and Regulatory Processes in Health and Education Policies*, this book gathers contributions of researchers associated to universities and/or research centers located in Scotland, France, Norway and Portugal. The chapters offer a diversified overview of social contexts, meanings, and processes that characterize the governing of education and health sectors, in a time when knowledge seems to be more intensively used in - and even created by - public policies.

The KNOWandPOL project was sponsored by the European Union's Sixth Framework Programme for Research, Technological Development and Demonstration - Citizens and Governance in a Knowledge-based Society theme (contract 028848-2). The information and the opinions referred in this book are each author's responsibility and do not necessarily reflect the European Union's official opinion.
