CONTENTS

Chapter 1 — Introduction	1
Scope and Objectives	1
The Evolution of Landfills for Waste Management	2
Landfills as Bioreactors	3
Regulatory Status.....	4
Organization of the Book.....	5
Chapter 2 — Modern Landfill Fundamentals	7
Introduction.....	7
Overview of Modern Sanitary Landfills	7
Landfill Containment Systems.....	9
Compacted Soil Barrier Layers	10
Synthetic Barrier Layers	10
Liner Systems	11
Cap Systems	12
Collection and Control of Leachate.....	13
Leachate Generation	13
Leachate Collection and Storage.....	14
Leachate and Gas Management at MSW Landfills.....	15
The Landfill as a Biological System	16
Characteristics of Leachate	18
Leachate Treatment and Disposal.....	20
Characteristics and Generation of Landfill Gas.....	20
Landfill Gas Control.....	21
Waste Decomposition and Landfill Settlement.....	22
Landfill Operation Strategies.....	23
Chapter 3 —Landfill Bioreactor Studies	25
Laboratory Scale Studies	25
Georgia Institute of Technology Experiment I	25
University of Louisville Experiment	27
Federal Republic of Germany Experiment.....	28
Newcastle University Experiment	30
Georgia Institute of Technology Experiment II	31
Pilot-Scale Bioreactor Studies	32
Sonoma County, California.....	32
Georgia Institute of Technology Study	33
Mountain View Landfill, California.....	36
Binghamton, New York	37
Breitenau Landfill, Australia	38
Broghborough, United Kingdom	43
SORAB Test Cells.....	45
Full-Scale Landfill Bioreactor Studies	45
Lycoming County, Pennsylvania.....	45
Seamer Carr Landfill, United Kingdom.....	52

German Experiences	54
Bornhausen Landfill, Germany	56
Summary	57

Chapter 4 — Full-Scale Experiences with Bioreactor Landfills — Case Studies	61
Introduction	61
Southwest Landfill, Alachua County, Florida	61
Central Facility Landfill, Worcester County, Maryland	64
Winfield Landfill, Columbia County, Florida	67
Pecan Row Landfill, Lowndes County, Georgia	69
Lower Mount Washington Valley Secure Landfill, Conway, New Hampshire	72
Coastal Regional Solid Waste Management Authority Landfill, Craven County, North Carolina	72
Lemons Landfill, Stoddard County, Missouri	74
Mill Seat Landfill, Monroe County, New York	77
Yolo County Landfill, California	79
Additional Full-Scale Efforts	80

Chapter 5 — The Hydrodynamics of Leachate Recirculating Landfills	85
Introduction	85
Leachate Generation	85
Leachate Quality	85
Predicting Leachate Quality	85
Internal Storage of Leachate	86
Moisture Movement	90
Unsaturated Leachate Flow	91
Unsaturated Flow Characteristics	92
Values of Saturated Hydraulic Conductivity in Landfills	96
Mathematical Modeling of Leachate Recirculation	97
Trench Modeling	98
Vertical Infiltration Well Modeling	98
Model Results	98
Leachate Recirculation Field Testing	99

Chapter 6 — The Impact of Leachate Recirculation of Leachate and Gas Characteristics	105
Introduction	105
Leachate Characteristics of Recirculating Landfills	105
Fate and Transport of Priority Pollutants	106
Comparison of Waste Stabilization Rates	109
Leachate Treatment Implications	113
Leachate Quantities	114
Gas Production	115

Chapter 7 — Landfill Bioreactor Design	117
Introduction	117
Liner/Leachate Collection System	117
Leachate Storage	118

Impact of Storage on Offsite Leachate Management.....	119
Storage Sizes.....	120
Leachate Reintroduction Systems.....	122
Prewetting of Waste.....	123
Leachate Spraying.....	125
Surface Ponds.....	125
Vertical Injection Wells.....	126
Horizontal Subsurface Introduction.....	126
Leachate Recirculation System Design.....	128
Horizontal Trenches.....	128
Vertical Recharge Wells.....	129
Design Approach.....	130
Final and Intermediate Caps.....	131
Gas Collection.....	132
Cell Construction.....	133
Construction Costs.....	134
Summary.....	134

Chapter 8 — Landfill Bioreactor Operation..... 137

Introduction.....	137
Waste Characterization.....	137
Waste Composition.....	137
Waste Physical Properties.....	138
Oxidation Reduction Conditions.....	139
Moisture Content.....	140
Recirculation Strategies.....	141
Leachate Recirculation Frequency.....	141
Extent of Leachate Recirculation.....	142
Effects of Waste Placement Rate.....	143
Use of Old Cells.....	143
Bioreactor Augmentation.....	148
Temperature Control.....	148
Nutrients.....	148
Buffering.....	149
Inoculation.....	149
Daily and Intermediate Covers.....	149
Settlement.....	150
Monitoring.....	151
When is the Waste Stable?.....	153

Chapter 9 — Materials Recovery and Reuse from Bioreactor Landfills..... 155

Introduction.....	155
Landfill Treatment and Reclamation Strategies.....	156
Benefits of Bioreactor Landfill Treatment and Reclamation.....	156
Conceptual Operation Approach.....	157
Mass Balance Design for Landfill Reclamation.....	158
Bioreactor Landfill Unit Sizing.....	158
The Amount and Composition of Reclaimed Material.....	159

Methods of Landfill Reclamation	161
Previous Experience with Landfill Reclamation	163
Collier County, Florida	163
Edinburgh, New York	164
Lancaster County, Pennsylvania	165
Use of Reclaimed Materials	166
Future Directions for Bioreactor Landfills	167
References	169
Index	177
