

Language, Usage and Cognition

Language demonstrates structure while at the same time showing considerable variation at all levels: languages differ from one another while still being shaped by the same principles; utterances within a language differ from one another while still exhibiting the same structural patterns; languages change over time, but in fairly regular ways. This book focuses on the dynamic processes that create languages and give them their structure and their variance. Joan Bybee outlines a theory of language that directly addresses the nature of grammar, taking into account its variance and gradience, and seeks explanation in terms of the recurrent processes that operate in language use. The evidence is based on the study of large corpora of spoken and written language, and what we know about how languages change, as well as the results of experiments with language users. The result is an integrated theory of language use and language change which has implications for cognitive processing and language evolution.

JOAN BYBEE is Distinguished Professor Emerita in the Department of Linguistics at the University of New Mexico. Her previous publications include *Phonology and Language Use* (Cambridge, 2001) and *Frequency of Use and the Organization of Language* (2007).

	and unfavourable preceding phonological environment	
	with low and high FFC	page 42
3.2	Number of items preceding and following <i>don't</i>	44
3.3	Frequencies of forms of have and have to in the BNC	47
4.1	Proportion of <i>no</i> -negation	70
5.1	Number of adjectives used with quedarse related to solo	
	in the spoken and written corpus	86
5.2	Adjectives with quedarse grouped with inmóvil indicating	
	motionlessness	86
5.3	Adjectives with quedarse grouped with sorprendido	87
5.4	Fifteen mothers' most frequent verbs and number of verb types	s
	for three constructions in Bates et al. (1988) corpus	89
5.5	Adjectives with <i>quedarse</i> indicating bodily states	92
5.6	Adjectives with volverse	93
5.7	Adjectives with hacerse	93
5.8	Number of occurrences and number of types with a human	
	subject and an adjective in a spoken corpus of 1.1 million	
	words and a written corpus of about one million words	94
5.9	Comparison of acceptability judgements, Collostructional	
	Strength and frequency in construction for adjectives	
	with quedarse	100
5.10	Comparison of acceptability judgements, Collostructional	
	Strength and frequency in construction for adjectives	
	with ponerse	101
7.1	Increase in frequency of auxiliaries (modals, be in passive	
	and perfect, have in perfect) compared to finite main verbs	
	(with or without do) and be as a main verb	125
7.2	Questions occurring with a main verb (whether used	
	with do or the main verb inverted), forms of be and the	
	modals and perfects	126

3.1 Word-initial /s/ reduction rates for words with favourable

vii

viii	List of tables	
7.3	Negatives with <i>not</i> , numbers showing main verbs (whether used	
	with do or not), forms of be and the modals and perfects	128
7.4	Negative declaratives and questions are much less frequent	
	than affirmative declaratives	131
7.5	Distribution of finite main verbs, forms of be, modals and	
	perfects in affirmative declarative clauses	131
7.6	Type/token ratios for questions with main verb inverted and	
	questions with do inverted	132
7.7	Type/token ratios for negatives with not appearing after a	
	finite main verb, and with do (or don't)	132
8.1	The ten most frequent items occurring before and	
	after will and 'll	137
8.2	Prefabs (as percentage of aux and of gerund; all time	
	periods combined)	149
9.1	Comparison of frequency of $can + verb$ to $can't + verb$	153
9.2	Contexts for can think and can't think	154
9.3	Items following can believe and can't believe	155
9.4	Contexts for can say and can't say	156
9.5	Categories following can afford and can't afford	157
9.6	Material verbs with can and can't	159
9.7	Number of occurrences in Switchboard of four expressions	160
9.8	Distribution in Switchboard of items following four phrases	
	(about 100 tokens each studied), pragmatically determined	160
9.9	Distribution in Switchboard of items following four phrases	161
10.1	Simple present and progressive marking in	
	non-modal predicates	181

Acknowledgements

A researcher's primary debt is to her teachers, students and colleagues, with whom she has exchanged ideas, critiques and inspiration over the years. In my case, a whole community of linguists exploring functional issues, diachronic change, typology and usage effects are cited in the pages of this work for contributing to it through their example and support. This book is based on a forty-year tradition of functional-typological and cognitive linguistics and is dedicated to the men and women who during this period showed the courage to think outside the (black!) box. The book aspires to sum up their work from my own perspective, to apply a consistent set of hypotheses to phonology, morphosyntax and semantics, and to formulate specific new hypotheses about how domain-general processes contribute to the structuring of language.

As for contributions of a more personal nature, I am honoured to name two of my closest friends and colleagues, Sandra Thompson and Rena Torres Cacoullos, who lent personal support and provided their scholarly perspective on drafts of various chapters. I also thank Clay Beckner, who worked with me on Chapters 5 and 8, and came up with much of the data and many of the arguments cited in Chapter 8 (as we collaborated on a paper on a similar topic). I am also grateful to Ben Sienicki for technical support and to Shelece Easterday for constructing the index.

Finally, to my family and friends, who support my activities in many ways, and to my husband, Ira Jaffe, I extend heartfelt thanks.
