CONTENTS

CONTRIBUTORS	xiii
FOREWORD	xv
CUMULATIVE LISTING OF VOLUMES IN SERIES	xvii
CHAPTER 1 INTRODUCTION	1
<i>Akos Vertes, Renaat Gijbels, and Fred Adams</i>	
References	6
CHAPTER 2 LASERS IN MASS SPECTROMETRY: ORGANIC AND INORGANIC INSTRUMENTATION	7
<i>Luc Van Vaeck, Wim Van Roy, Renaat Gijbels, and Fred Adams</i>	
2.1. Introduction	7
2.2. Early Applications in Elemental Analysis of Solids	9
2.3. Early Applications in Organic Mass Spectrometry	19
2.3.1. Magnetic Sector LD-MS Instruments	21
2.3.2. Quadrupole LD-MS Instruments	26
2.3.3. Time-of-Flight LD-MS Instruments	31
2.3.4. LD in FTMS Instruments	34
2.3.5. Ion Storage LD-MS Instruments	37
2.4. Laser Microprobe Mass Spectrometry (LMMS)	40
2.4.1. Laser Probe Mass Spectrograph (LPMS)	40
2.4.2. Laser Microprobe with TOF-MS	42
2.4.3. Laser Microprobe with FTMS	51
2.5. Laser Ablation in Two-Step Desorption and Ionization	54
2.5.1. Inorganic Applications	55

2.5.2. Organic Applications	68
2.6. Laser Desorption and Nonlaser Postionization	77
2.6.1. Inorganic Applications	77
2.6.2. Organic Applications	81
2.7. Laser Desorption and Ionization in a Two-Step Process	90
2.7.1. Inorganic Applications	90
2.7.2. Organic Applications	93
2.8. Lasers at Other Stages of the MS Experiment	98
2.8.1. Multistage Experiments in Magnetic Sector MS	99
2.8.2. Multistage Experiments in TOF-MS	101
2.8.3. Multistage Experiments in Quadrupole Ion Trap MS	104
2.8.4. Multistage Experiments in FTMS	107
List of Acronyms	115
References	116

CHAPTER 3 METHODS UTILIZING LOW AND MEDIUM LASER IRRADIANCE

A. Laser-Induced Thermal Desorption and Matrix-Assisted Methods	127
<i>Akos Vertes and Renaat Gijbels</i>	
3A.1. Introduction	127
3A.2. Laser-Induced Thermal Desorption	130
3A.3. The Irradiance Threshold for Plume Formation	132
3A.4. Matrix-Assisted Laser Desorption	135
3A.5. MALD in the Analysis of Biological Molecules	141
3A.5.1. Peptides and Polypeptides	141
3A.5.2. Proteins	143
3A.5.3. Nucleotides	147
3A.5.4. Carbohydrates	148
3A.5.5. Other Compounds	149
3A.6. Proposed Mechanisms and Models	152
3A.6.1. Phase Explosion	153
3A.6.2. The Cool Plume Model	154

3A.6.3.	Desorption Induced by Electronic Transition	158
3A.6.4.	The Pressure Pulse Model	160
3A.6.5.	Energy Redistribution Processes	162
3A.7.	Ion Formation	167
	References	169
B.	Structural Characterization of Organic Molecules by Laser Mass Spectrometry	177
	<i>Luc Van Vaeck, Wim Van Roy, Renaat Gijbels, and Fred Adams</i>	
3B.1.	Introduction	177
3B.2.	Some General Concepts in LD-MS	180
3B.2.1.	Thermal Ionization and Generation of Neutrals in LD-MS	182
3B.2.2.	Gas Phase Ion-Molecule Reactions in LD-MS	185
3B.2.3.	Shockwave or Nonthermal Desorption in LD-MS	187
3B.2.4.	Resonant Desorption in LD-MS	189
3B.2.5.	Ionization in TOF-LMMS	190
3B.3.	Survey of LD Mass Spectra for Diagnostic Analysis	195
3B.3.1.	Polycyclic Aromatic Hydrocarbons (PAHs) and Related Analogues	195
3B.3.2.	Simple Molecules	199
3B.3.3.	Medium-Sized Polyfunctional Molecules	209
3B.3.4.	Oligosaccharides	235
3B.3.5.	Nucleosides and Nucleotides	240
3B.3.6.	Glycosides	246
3B.3.7.	Amino Acids	250
3B.3.8.	Oligopeptides	252
3B.3.9.	Lipopolysaccharides	256
3B.3.10.	Polymers	258
3B.3.11.	Ionic Compounds and Salts	266
3B.4.	Local Analysis by Means of Structural Ions	300
	References	309

C.	Two-Step Methods for Separated Volatilization and Laser-Induced Multiphoton Ionization of Small Biological Molecules in Supersonic Jets	321
	<i>David M. Lubman</i>	
3C.1.	Introduction	321
3C.2.	Principles of Resonance-Enhanced Multiphoton Ionization	322
3C.3.	Experimental Methodology	328
3C.3.1.	Apparatus	328
3C.3.2.	Desorption Method	332
3C.3.3.	Supersonic Jet Cooling	333
3C.3.4.	Laser Ionization	334
3C.4.	Applications	334
3C.4.1.	Spectroscopy and Mass Spectrometry of Neurotransmitters and Other Small Biological Molecules	334
3C.4.2.	Mass Spectrometry and Spectroscopy of Peptides	347
3C.5.	Conclusions	363
	References	365
CHAPTER 4	THE HIGH LASER IRRADIANCE REGIME	
A.	Laser Ablation and Plasma Formation	369
	<i>Claude R. Phipps and Russell W. Dreyfus</i>	
4A.1.	Plasma-Mediated Laser-Target Coupling at Irradiance Greater than 1 GW/cm^2	369
4A.1.1.	Introduction	369
4A.1.2.	Basic Concepts: Survey of the Four Interaction Regions	372
4A.1.3.	Applicability Conditions for High-Irradiance Theory	377
4A.1.4.	High-Irradiance Absorption and Ignition at the Solid Surface	381
4A.1.5.	Absorption and Energy Redistribution Processes in Dense LTE Plasma	385

4A.1.6.	What Can Be Learned About Ablation Parameters from a General Theory?	396
4A.2.	Experimental Results for High Irradiance	407
4A.2.1.	Mass Loss Rate	407
4A.2.2.	Ablation Depth	408
4A.3.	Ion Acceleration in the Low-Density Plume	411
4A.3.1.	Experiments	411
4A.3.2.	Theory and Modeling	415
4A.4.	Measurement Techniques in the Low-Density Plume Created by High Laser Irradiance	420
4A.4.1.	Langmuir Probes	420
4A.4.2.	Time of Flight	422
4A.4.3.	Laser-Induced Fluorescence	423
4A.4.4.	Other Ion Diagnostics	424
4A.5.	Summary and Conclusions	426
	References	426
B.	Solid Sampling for Analysis by Laser Ablation	433
	<i>Lieselotte Moenke-Blankenburg</i>	
4B.1.	Introduction	433
4B.2.	Microplume Generation	434
4B.2.1.	Laser	435
4B.2.2.	Laser-Target Interaction	435
4B.3.	Laser Microprobe Mass Spectrometry (LMMS)	437
4B.4.	Laser Ablation-Inductively Coupled Plasma-Mass Spectrometry (LA-ICP-MS)	440
4B.5.	Conclusions	450
	References	450

C. Inorganic Trace Analysis by Laser-Induced Mass Spectrometry	453
<i>Hans-Joachim Dietze and Johanna Sabine Becker</i>	
4C.1. Introduction	453
4C.2. Laser Mass Spectrometric Techniques for Inorganic Trace Analysis	455
4C.2.1. Laser Ionization Mass Spectrometry (LIMS)	455
4C.2.2. Resonance Ionization Mass Spectrometry (RIMS)	456
4C.2.3. Laser Ablation Mass Spectrometry (LAMS)	458
4C.3. Instrumentation and Experimental Conditions	459
4C.4. Analytical Features	468
4C.4.1. Fundamentals	468
4C.4.2. Detection Limits, Sensitivity, Precision, and Accuracy	470
4C.4.3. Appearance of Molecular and Cluster Ions in Laser-Induced Mass Spectra	476
4C.5. Applications of Laser-Induced Mass Spectrometric Methods	482
4C.5.1. Application to Metals	483
4C.5.2. Application to Semiconductors and Insulators	483
4C.5.3. Geological Applications	488
4C.5.4. Applications of RIMS	489
4C.5.5. Application to Depth Profiling and Local Analysis	495
4C.6. Conclusion	496
References	497

CHAPTER 5	EXOTIC INSTRUMENTS AND APPLICATIONS OF LASER IONIZATION MASS SPECTROMETRY IN SPACE RESEARCH	505
	<i>George G. Managadze and Igor Yu. Shutyaev</i>	
5.1.	Introduction	505
5.2.	LIMA-D: A Remote Laser Mass Analyzer for Space Applications	507
5.2.1.	General Description of LIMA-D and the History of Its Design	507
5.2.2.	The Reflector: Calculations and Construction	512
5.2.3.	The Laser and Focusing System	516
5.2.4.	Control and On-Board Data Processing	519
5.2.5.	Laboratory Experiments with LIMA-D and In-Flight Tests	524
5.2.6.	A Promising Instrument for the Future Asteroid Mission	529
5.3.	LASMA: A Miniature Laser Mass Analyzer	532
5.3.1.	Description of the Instrument	532
5.3.2.	Test Results: Resolution, Sensitivity, and Accuracy of Analysis	535
5.3.3.	Applications of Mini-MS: Advantages and Disadvantages	540
5.3.4.	Perspectives of Mini-MS Design in Our Laboratory	544
	Note Added in Proof	545
	References	547
