

Latent Variable Models
An Introduction to Factor, Path,
and Structural Analysis

Third Edition

John C. Loehlin
University of Texas

LAWRENCE ERLBAUM ASSOCIATES, PUBLISHERS
1998 Mahwah, New Jersey **London**

Contents

Chapter One: Path models in factor, path, and structural equation analysis	1
Path diagrams	2
Path analysis	8
Factor models	17
Structural equations	26
Original and standardized variables	28
Differences from some related topics	32
Notes	34
Exercises	35
Chapter Two: Fitting path models	38
Iterative solution of path equations	38
Matrix formulation of path models	43
Full-fledged model-fitting programs	47
Goodness-of-fit criteria	54
Hierarchical χ^2 tests	62
Descriptive criteria of model fits	68
The power to reject an incorrect model	78
Identification	82
Correlations versus covariances in model fitting	84
Notes	85
Exercises	88
Chapter Three: Varieties of path and structural models--I	90
Structural and measurement models	90
Confirmatory factor analysis	94
Some psychometric applications of path and structural models	98
Structural models--controlling extraneous variables	109
Notes	112
Exercises	113

Chapter Four: Varieties of path and structural models--II	116
Models with reciprocal influences and correlated errors	116
Models of events over time	121
Models comparing different groups	130
A concluding comment	140
Notes	141
Exercises	142
Chapter Five: Exploratory factor analysis--I. Extracting the factors	143
Methods of factor extraction	146
Estimating communalities	154
Determining the number of factors	157
Factor extraction using packaged programs--SPSS, SAS, MINITAB	165
Notes	167
Exercises	168
Chapter Six: Exploratory factor analysis--II. Transforming the factors to simpler structure	170
Orthogonal transformations--Quartimax and Varimax	173
Oblique transformations	176
Estimating factor scores	181
Factor rotation programs in SPSS and SAS	186
An example: Thurstone's box problem	187
Notes	192
Exercises	193
Chapter Seven: Elaborations and extensions of latent variable analysis	195
Exploratory modification of a model	195
Alternative models	200
Models involving means	204
Phantom variables	210
Multivariate path models	212
Nonlinear effects of latent variables	215
Nonlinear factor analysis	220
Higher order factors	223
Modes of latent variable analysis	228
Criticisms of latent variable modeling	233
Notes	238
Exercises	241

Appendices	244
A. Simple matrix operations	244
B. Derivation of matrix version of path equations	251
C. LISREL matrices and examples	253
D. Alpha and Canonical factor extraction--a worked example	257
E. Examples of input for factor extraction by SPSS and SAS	259
F. Data matrix for Thurstone's box problem	260
G. Table of Chi Square	262
H. Noncentral Chi Square for estimating power	263
I. Power of a test of poor fit and sample sizes for powers of .80 and .90	264
Answers to exercises	265
References	278
Index	301
