### **Leaf and canopy responses to elevated CO<sub>2</sub> in a pine forest under free-air CO<sub>2</sub> enrichment**

Oecologia (1995) 104:139–146

The photosynthetic parameters of *Pinus taeda* foliage originally presented in Table 2 were shown with incorrect units. The units for  $A_{\text{net}}$  (at  $C_a=350$  and  $550 \mu\text{mol mol}^{-1}$ ),  $A_{\text{sat}}$  and  $V_{c_{\text{max}}}$  should be  $\mu\text{mol CO}_2 \text{ m}^{-2} \text{ s}^{-1}$ . The units shown in all of the original figures were correct. We sincerely regret any confusion that may have arisen over this.
