If you believe that this document breaches copyright please contact [librarypure@kcl.ac.uk](mailto:librarypure@kcl.ac.uk) providing details, and we will remove access to the work immediately and investigate your claim.

Dear Author/Editor,

Here are the proofs of your chapter as well as the metadata sheets.

### Metadata

- Please carefully proof read the metadata, above all the names and address.
- In case there were no abstracts for this book submitted with the manuscript, the first 10-15 lines of the first paragraph were taken. In case you want to replace these default abstracts, please submit new abstracts with your proof corrections.

### Page proofs

- Please check the proofs and mark your corrections either by
  - entering your corrections online
  - or
  - opening the PDF file in Adobe Acrobat and inserting your corrections using the tool "Comment and Markup"
  - or
  - printing the file and marking corrections on hardcopy. Please mark all corrections in dark pen in the text and in the margin at least  $\frac{1}{4}$ " (6 mm) from the edge.
- You can upload your annotated PDF file or your corrected printout on our Proofing Website. In case you are not able to scan the printout, send us the corrected pages via fax.
- Please note that any changes at this stage are limited to typographical errors and serious errors of fact.
- If the figures were converted to black and white, please check that the quality of such figures is sufficient and that all references to color in any text discussing the figures is changed accordingly. If the quality of some figures is judged to be insufficient, please send an improved grayscale figure.

## On the Theory of Juridic Fictions. With Special Consideration of Vaihinger's Philosophy of the As-If

Hans Kelsen and Christoph Kletzer

1 **Abstract** This is a translation into English of Kelsen, Hans. 1919. Zur Theorie der  
2 Juristischen Fiktionen: Mit besonders Berücksichtigung von Vaihingers Philosophie  
3 des Als Ob, *Annalen der Philosophie* 1: 630–658.

### 4 1.1 Content

**AQ1**

6 I. The notion of a fiction and the object of cognition in legal science. The opposi-  
7 tion to “reality”. The actuality of nature and the actuality of the law. The extension  
8 of Vaihinger's concept of a fiction. True fictions of legal *theory*. The legal subject.

9 II. The so-called “fictions” of legal *practice*. The pseudo-fictions of the legisla-  
10 tor. Their fundamental difference from epistemological fictions; the absence of a  
11 cognitive aim and the absence of an opposition to the actuality of nature or the  
12 actuality of the law. Article 347 of the German Commercial Code. The praesumptio  
13 iuris. The praetorian fictions.

14 III. “Fictions” in the application of the law. The analogy. Its uncorrectable con-  
15 flict with the actuality of the law and its juristic inadmissibility. The legally required  
16 analogy.

17 IV. Legal theory and legal practice. The moral fiction of “freedom“. Its dispensa-  
18 bility in the case of a dissolution of the faulty syncretism of the perspectives of is  
19 and ought. The fiction of the “social contract” establishing the state. Its dispensa-  
20 bility for legal positivism.

21 V. The sovereignty of the legal order. The independence of law from morality.  
22 The allegedly fictitious character of this separation. Vaihinger's “practical” fictions.  
The legal norm and legal duty are not fictions.

1

23 **1.2 I**

24 A considerable part of Vaihinger's notable theory of fictions has been developed by  
25 reference to the so called "juridic" fictions. As a matter of fact, Vaihinger under-  
26 stood juridic fictions to a paradigmatic case of fictions. For him, apart from math-  
27 ematics, there was hardly another field better suited to the deduction of logical laws,  
28 to the illustration or development of logical methods in general, and of the method  
29 of the fiction in particular, than the law. He further expressed his regret about the  
30 fact that logicians have so far neglected the juridic fiction since they did not see that  
31 logic has to take its subject material from an actually living science.<sup>1</sup> For Vaihinger  
32 the juridic fictions are "scientific" fictions<sup>2</sup> and they do not in principle differ from  
33 epistemological fictions.<sup>3</sup> He explicitly stresses "the formal identity of the actions  
34 of understanding and of the whole intellectual state in juridic fictions with all the  
35 other scientific fictions".<sup>4</sup>

36 However, the notion of a "juridic fiction" captures quite a broad variety of phe-  
37 nomena: only a relatively small part of them can be seen as fictions in the actual  
38 sense of this term, i.e. as fictions according to Vaihinger's own definition. After all,  
39 most of the phenomena which Vaihinger himself treated as "juridic fictions" and  
40 which he uses to lay the foundations of his meritorious theory, are no fictions at all;  
41 at least they do not serve as examples of the intellectual constructs, to which the  
42 very qualities apply which he so fittingly describes. Thus, even though we have to  
43 unreservedly agree with the main results of Vaihinger's philosophy of the As-If, it  
44 is especially in relation to the juridic fictions, i.e. in relation to the kind of fictions  
45 Vaihinger prefers to use, that the arguments have to be seen to be unconvincing.

46 According to Vaihinger a fiction is characterised both by its end and by the means  
47 through which this end is reached. The end is the cognition of the actual world; the  
48 means, however, is a fabrication, a contradiction, a sleight of hand, a detour and  
49 passage of thought. It might be a somewhat odd means, the fiction is nevertheless  
50 a means that logic uses; it has epistemological character and has its relevance as an  
51 instrument of cognition.<sup>5</sup>

52 It is the cognition of *actual reality* which the fiction serves. "The conscious turn-  
53 ing away from actual reality is meant to prepare the cognition of the latter."<sup>6</sup> And  
54 the opposition to actual reality is one of the principal characteristics of the fiction.<sup>7</sup>

55 Now, it has to appear doubtful from the very beginning whether in the natural  
56 sciences we could ever come across fictions which do not in their essence aim at  
57 the cognition of actual reality. If we take a fiction to be an—admittedly somewhat

---

<sup>1</sup> Vaihinger (1913, p. 46).

<sup>2</sup> Ibid 257.

<sup>3</sup> Ibid 447.

<sup>4</sup> Ibid 250.

<sup>5</sup> Ibid 175 ff and passim.

<sup>6</sup> Ibid. 27.

<sup>7</sup> Ibid 171 ff.

58 odd—means to grasp actual reality, then only a view of legal science which has  
59 completely strayed off its usual ways could make use of a fiction in this sense, and  
60 accordingly a fiction in this sense could never yield legal scientific cognition, not  
61 even in an indirect sense, via a detour. If by means of a fiction we claim the actuality  
62 of something (and be that in contradiction to actuality itself), then in a scientific en-  
63 deavour which does not even attempt the cognition of something existing in actual  
64 reality, a fiction can only ever be an illegitimate and completely useless, viz. only  
65 harmful error.

66 As a matter of fact, Vaihinger was himself well aware of the true nature of legal  
67 science! He repeatedly stresses that the task of legal science is not to gather knowl-  
68 edge of something that exists in actual reality. “So far the only truly scientific fiction  
69 we talked about was the juridic fiction; however, it needs to be stressed that legal  
70 science is not actually an empirical science, a science that deals with what actually  
71 exists, but a science that deals with human, arbitrary institutions.”<sup>8</sup> Legal science  
72 aims at the knowledge of an *ought*; calling this object “human arbitrary institutions”  
73 is not entirely correct, since human arbitrary institutions, too, are something actual  
74 and can be objects of an empirical science, e.g. of sociology.

75 However, no grave objection to Vaihinger’s theory of fictions emerges from all  
76 of this. What emerges is only a significant modification. After all, legal science does  
77 indeed make use of fictions. We will demonstrate below, what kind of fictions these  
78 are and that most of Vaihinger’s “juridic fictions” are not true fictions at all. All that  
79 needs to be said here is that Vaihinger’s concept of a fiction becomes too narrow, as  
80 soon as one allows only empirical reality to be the object, the only target or product  
81 of cognition. And insofar as one wants to accept as sciences also those sciences  
82 which are not natural sciences, such as, for instance, ethics and, in particular, legal  
83 science, then such a restrictive understanding of fictions cannot be accepted. A thus  
84 appropriately expanded concept of a fiction emerges, as soon as we replace “actual  
85 reality” as the specific object of cognition with this “object of cognition” itself,  
86 understood in general terms. And we have to speak of a fiction as soon as cognition  
87 (and especially juridic cognition) takes a detour in knowing its object (and in juridic  
88 knowledge this object is the law, the legal order, the legal ought), a detour in which  
89 it consciously sets itself in contradiction to this object; and be it only in order to bet-  
90 ter grasp it: just like a rock-climber, in order to avoid an obstacle and reach his goal  
91 more easily, is sometimes forced to temporarily climb downwards, i.e. in a direction  
92 directly opposed to his goal, the peak.

93 It is in this sense that there are true, i.e. epistemological fictions in legal science.  
94 They are fictions of the attempt to know the law, fictions of the intellectual mastery  
95 of the legal order. They are fictions of *legal theory*. Such a fiction, an auxiliary  
96 concept, an auxiliary construct, is, for instance, the concept of a legal subject or the  
97 concept of a subjective right.

98 In this context we do not need to fully investigate the concept of a legal subject  
99 or a person in all its facets. What should suffice is to show how fruitful the applica-  
100 tion of Vaihinger’s philosophy of the As-If to the fictions of *legal theory* can be.

---

<sup>8</sup> Ibid 257.

101 In the common juristic understanding a person—and be it the physical person or  
102 the legal person—exists as an object distinct and independent from the legal order.  
103 We usually call this object the “bearer” of duties and rights and attribute to it more  
104 or less actual existence in the real world. Whether one wants to limit this kind of  
105 independent existence to the physical person or wants to extend it also to the so  
106 called legal person (like the organic theory wants to do) does not matter here. What  
107 suffices is to note the marked tendency to posit the person as something that exists  
108 in actual reality.

109 Now, if the physical as well as the legal subject can be shown to be nothing but  
110 the *personification of a complex of norms*<sup>9</sup> for the purposes of simplification and  
111 illustration—something which cannot be comprehensively demonstrated in this article—  
112 then the idea of a person, which is commonplace in legal theory, would be a  
113 typical example of a fiction; and Vaihinger has to be credited with making the inter-  
114 esting and complex thought-mechanism of the latter transparent. It is an intellectual  
115 construct which aims at capturing the object of legal science, i.e. the legal order, yet  
116 is nevertheless itself merely a product of imagination and is in thought *added to the*  
117 *object of cognition*. It is thus somehow a duplication of the object and a distortion  
118 of cognition. By that, this mere aid-to-thinking sets itself in direct opposition to the  
119 object, i.e. to the specific legal reality, and becomes in itself contradictory, just like  
120 any analysis of the concept of the person would reveal. Now, if the person (which  
121 was originally only set up as a specific aid-to-thinking, as a mere framework aimed  
122 at grasping the legal order) is posited to be an actually existing thing, i.e. as a kind  
123 of natural object, then a thus enhanced fiction does indeed involve an opposition to  
124 actual reality, which can only be possible in the transgression of a legal theory, thus  
125 in a theory that claims to have natural facts as its objects.

126 The concept of a legal subject is primarily a kind of fiction which Vaihinger calls  
127 a “personifying fiction”. They emerge from our tendency to anthropomorphically  
128 personify intellectual constructs, a tendency which has forever dominated our intel-  
129 lectual capacities, and which forms this “undying inclination of man”<sup>10</sup> to hyposta-  
130 sise everything which is purely intellectual into the shape of a person or subject and  
131 to thus make it intelligible. “The common principle is the hypostasis of phenomena  
132 in some respect, irrespective of how far the hypostasis aligns itself with this image  
133 of the person. This image of the person is also the truly determining factor in the cat-  
134 egory of the thing.”<sup>11</sup> “The basic scheme of substantiality is, after all, personality.”<sup>12</sup>  
135 This does indeed apply to the personifications of the law (i.e. of the legal norm),  
136 and it is in this way that we have to understand the legal subject. The legal norm,  
137 i.e. the fact that certain human behaviour ought to be a certain way, presents itself  
138 as the hypostasis of this purely intellectual object. And the insight that the concept

---

<sup>9</sup> In the case of the personification of the legal order as a whole we arrive at the so-called person of the state and in the case of the personification of individual legal order we arrive at the physical or legal person.

<sup>10</sup> Ibid 391.

<sup>11</sup> Ibid 50.

<sup>12</sup> Ibid 391.

139 of a thing is also a personifying fiction lets the legal subject and the subjective right,  
140 which are somehow understood as “things” appear to be quite similar, if not identi-  
141 cal hypostases of the “objective” legal norm. It cannot be stressed enough that the  
142 concept of the legal subject has the same logical structure as the most characteristic  
143 form of personifying fiction, i.e. of the concept of the soul, or the concept of force,<sup>13</sup>  
144 the logical untenability of which does not militate against its actual practicability. It  
145 would certainly be a worthwhile endeavour to try to understand the legal person as a  
146 kind of *legal soul*. And it is by no means moot to clarify that the concepts of ethical  
147 personhood and of the “conscience”, too, are illustration-serving personifications  
148 of a norm, namely the moral norm. Vaihinger very appropriately characterises this  
149 *duplication* of the object of cognition which is effected in the fiction in general, and  
150 in the personification in particular, and one could not describe this strange duplica-  
151 tion of the law, this tautology, which can be found in the legal subject, better than  
152 with the words of Vaihinger, who in this passage did not intend to capture the legal  
153 concept of the person, but the concept of a force: “It was especially the seventeenth  
154 century which has created many of these concepts in its sciences;<sup>14</sup> it was believed  
155 that by means of these concepts one has actually understood something; however,  
156 such words are but shells, which are supposed to hold together and contain a mate-  
157 rial nucleus. And just as the shell in all its forms traces the nucleus and in duplicat-  
158 ing the latter simply represents it externally, so these words or concepts are but  
159 tautologies, which simply repeat the actual thing in external clothing.”<sup>15</sup>

160 The contradictions, which are posited in the notion of a legal subject, which  
161 claims to be a thing distinct from the legal norm (of the “objective law”), but which  
162 is just the latter’s repetition, these contradictions may not be resolved, but they at  
163 least become transparent to us as soon as we accept (after Vaihinger has told us),  
164 that it lies within the nature of fictions to entangle us in contradictions. “By its very  
165 own doing thought leads us onto certain pseudo-concepts just as seeing leads us  
166 into unavoidable optical illusions. As soon as we recognise this optical semblance  
167 as being necessary, as soon as we consciously accept the fictions created by it (e.g.  
168 God, freedom etc.) and also see through them we can bear the ensuing logical con-  
169 tradictions as necessary products of our thought and reach the insight that they are  
170 the necessary consequences of the inner mechanism of the thinking organ itself.”<sup>16</sup>

171 This is why the fiction of the legal subject, which is in itself contradictory, can  
172 nevertheless be accepted without harm to legal science, since it has the advantages  
173 of *illustration* and *simplification*. This, however, is true only as long as and insofar  
174 as one remains aware of its fictitious character and of the duplication which is ef-  
175 fected by means of the concept of the person. Until then we can dispense of what  
176 Vaihinger calls the *correction* of the fiction. “Insofar as the fiction presents an op-  
177 position to actual reality, it can only have value if it is employed *provisionally*. This

---

<sup>13</sup> Ibid 50.

<sup>14</sup> It has to be noted here, that Schloßmann (1906) also traces the concept of the legal person back to the systematic of the seventeenth century.

<sup>15</sup> Ibid 52.

<sup>16</sup> Ibid 223.

178 is why ... it needs to be corrected.”<sup>17</sup> “The mistake has to be reversed by simply dis-  
 179 charging of the construct which was fictitiously introduced.”<sup>18</sup> Vaihinger expressly  
 180 states: “Such a correction does not seem to be necessary for juridic fictions; and  
 181 it indeed is not necessary. Since here we are not dealing with an exact estimation  
 182 of something actual, but with a subsumption under an arbitrary law, a man-made  
 183 construct, not a natural law, not a natural relation.”<sup>19</sup> However, Vaihinger thereby  
 184 does not really refer to the kind of fictions which are found in the legal concept of a  
 185 person. The latter concept is created by legal science, by legal theory or the cogni-  
 186 tion of law. This is not the case with the with the “juridic” fictions employed by the  
 187 legislator or someone applying the law. However, it is to these that Vaihinger mainly  
 188 refers even though they are intellectual constructs which do not serve cognition  
 189 and are thus not fictions in the *logical* sense. Still, Vaihinger’s comments pertain  
 190 precisely to the fiction of the legal subject employed by *legal theory*. However,  
 191 by claiming that in legal science we do not intend to capture an actual reality he  
 192 has characterised the essence of legal science as opposed to natural science only in  
 193 a negative sense. Put positively, legal science intends to comprehend an ought, it  
 194 intends the cognition of norms.

195 The concept of the legal person can be employed with benefit as long as it is un-  
 196 derstood in accordance to its own logical structure, i.e. as a mirror image. However,  
 197 this concept has not been able to avoid the danger that comes with any personifi-  
 198 cation: its hypostatisation into an actual object of nature. Insofar as theory takes a  
 199 mere mirror image as an actual thing, it stretches the contradiction—one by which  
 200 the law as subject (i.e. the legal subject) already stands, in and of itself and before  
 201 any position of actuality exists, against the law as object (i.e. the objective law)—to  
 202 a contradiction against actuality. In the concept of a legal person a natural thing is  
 203 claimed to exist, which never and nowhere exists in actual reality. This is true both  
 204 for the contradictione contradic concept has not been a Vaihinger aptly compares  
 205 the fictitious constructs of thought with ere exists in actual reality. This is true both  
 206 for the “physical” and for the so-called “legal” person. Vaihinger aptly compares  
 207 the fictitious constructs of thought with “knots and nodes” which thought ties into  
 208 the threads presented to it, “knots and nodes ... which provide ancillary service to  
 209 thought, which, however, become pitfalls for thought, as soon as the knot is taken as  
 210 something that is contained in experience itself.”<sup>20</sup> It is precisely this illicit positing  
 211 of the person as being something actual which leads—as Vaihinger has shown in  
 212 relation to the other fictions—to all the “pseudo problems”, the “artificially created  
 213 difficulties”, the “self created contradictions” which abound in the doctrine of the  
 214 “legal” person just as they abound in all philosophical and scientific theories that  
 215 gather around a fictitious concept.<sup>21</sup>

---

<sup>17</sup> Ibid. 173.

<sup>18</sup> Ibid 297.

<sup>19</sup> Ibid 197.

<sup>20</sup> Ibid 230.

<sup>21</sup> ‘A solution of the so-called ultimate puzzle of the world will never be found, since that which seems puzzling to us, is the contradictions created by us, which emerge from the playful engagement with the mere forms and shells of cognition’: Ibid 52.

216 At least here, however, a “correction” has to step in, and this correction can hap-  
217 pen in no way other than by a reduction of the concept of the person to its natural  
218 boundaries, by means of a self-reflection of legal science, by means of a clarifica-  
219 tion of its logical structure. If one had not demanded from the legal concept of the  
220 person more than it can in its essence provide, then one could have been spared the  
221 entirely fruitless discussion which has developed around the person, and in particu-  
222 lar around the concept of the “legal” person; then the downright naive and paradox  
223 blunders of juridic theory and the excesses of an organic theory could have been  
224 avoided, blunders and excesses which can only be explained by reference to the  
225 delusive power of fictions, which also mislead scientific thought, and which lost  
226 itself in juristic mysticism.

### 227 1.3 II

228 What needs to be clearly distinguished from the fictions of legal theory are the  
229 so-called “*fictiones juris*”, the fictions of legal *practice*, i.e. of the *legislator* and  
230 of the *application of the law*. Now, as firstly concerns the “fictions” employed by  
231 the legislator, the fictions *within* the legal order, it must be stressed that these do  
232 not constitute “fictions” in Vaihinger’s sense. After all, the positing of a norm, the  
233 legislative activity, is not a process of thought, and does not have *cognition* as its  
234 goal. It is rather an act of will, if indeed we want to see it as a process or a proce-  
235 dure at all. The legal order is expressed in words and these words undoubtedly of-  
236 ten display the grammatical form which normally is found behind *epistemological*  
237 fictions: the “As-If”. However, due to the lack of any aim of cognition within the  
238 legal order—which as such is the object of cognition, and not itself cognition or an  
239 expression of cognition—the words of a legal norm can never contain a “fiction” in  
240 Vaihinger’s sense.

241 Let us immediately have a look at the example Vaihinger uses in his chapter  
242 on “juridic fictions”: article 347 of the German Commercial Code “where it is  
243 stipulated that a good which is not in time returned to the sender has to be treated  
244 *as if* it had been approved and accepted by the receiver.”<sup>22</sup> In this example we are  
245 supposed to immediately see the identity in principle between the analogous fic-  
246 tions, e.g. the categories, and the juridical fictions. However, in the categories, just  
247 as in all true fictions, the human intellect aims to comprehend actuality or some  
248 other object. In the fiction of Article 347, however, neither actuality nor anything  
249 else is intended to be *comprehended*, it should rather be *regulated*, a norm of *ac-*  
250 *tion* is given, i.e. an actuality is supposed to be *created*. Of course, there is a deep  
251 connection between the intellect which *orders* the world by employing categories  
252 and which thus creates the world as ordered unity, on the hand, and the law that  
253 regulates and thus creates the legal word, on the other. However, the difference of  
254 principle between the epistemological and juridic fiction of the legislator shows in

---

<sup>22</sup> Ibid 46 ff.

255 the fact that in the latter case there can never be found an opposition to actuality,  
256 be it to the actuality of nature, or be it to the actuality of law (i.e. of the law as an  
257 object of cognition). Such a contradiction could only be found in a statement about  
258 what is (and if one wants to accept the extended concept of a fiction here proposed:  
259 about that what ought to be). However, the law cannot include such a statement. In  
260 a law no *cognition* is expressed. The statements in which the law expresses itself  
261 are not statements in this sense. Article 347 by no means states that the goods not  
262 returned in time to the sender are actually approved and accepted. It simply states  
263 that in case goods are not returned in time the same norm applies as in the case the  
264 goods are accepted; it states that in this case the sender and the receiver have the  
265 same duties and the same rights as in the case of actual acceptance. Article 347  
266 stipulates that goods not returned in time have to be treated *just as* goods which  
267 are accepted. The grammatical form of the “As-If” thus is not in any way essential,  
268 it can be replaced by a mere “just as”. If the law subsumes two cases under the  
269 same norm, it by no means claims that both cases are alike—in the sense of *natu-*  
270 *rally* alike. Or otherwise every general norm would be “fiction” since there are  
271 no two men, two facts which are alike. However, “legally” they are effectively,  
272 actually and truly alike, since they are made alike by the legal order. Article 347 is,  
273 just like any so-called “fiction” of the legislator, nothing but an abbreviating ex-  
274 pression. The law simply wants to attach the same legal consequences to one case  
275 as it does to another. To phrase this in a separate norm would be too cumbersome,  
276 too laboured; or maybe the second case was not even considered in the first place.  
277 It would be superfluous to repeat all the rules which have already been set down  
278 for the first case. The legislator can rest content with declaring that in the second  
279 case the same rules apply as in the first case. It is a misunderstanding to suppose  
280 that this effect would be achieved by forcing the person applying the law to accept  
281 the idea that both cases are alike, i.e. that they do not differ as a matter of fact. That  
282 they are “legally” the same simply means that despite a natural *difference* in fact  
283 the *same* legal consequence is supposed to follow. And this difference of fact can  
284 by no means be ignored in applying the law. The judge first has to *establish* the  
285 facts; he has to establish whether the goods were accepted *or whether* they were  
286 not returned in time. If the recipient claims: I have not accepted the goods, then it  
287 has to be established that he did not return them in time. Where do we here find  
288 the opposition to reality?

289 In the context of distinguishing between the *fictio juris* (the fiction of the leg-  
290 islator) from the *praesumptio*, Vaihinger defines the juridic fiction as follows:  
291 “In the *praesumptio* a presumption is made *until the opposite is established*. By  
292 contrast, the fiction is the assumption of a statement, of a *fact, even though the op-*  
293 *posite is certain*.” He uses the following example: “If a man, whose wife commits  
294 adultery, nevertheless is treated as the father of the child born from this adulterous  
295 relation when in fact he was actually in the country at the time of the conception,  
296 then he is treated *as if* he were the father, even though he is not the father and even  
297 though everyone knows he is not. This last sentence distinguishes the *praesumptio*

298 from the fictio.”<sup>23</sup> However, even though it is quite correct to insist on a distinc-  
299 tion between the fictio and praesumptio, the fictio is not accurately captured here.  
300 The law does not claim that under certain conditions the husband is the *father*, i.e.  
301 the natural father, the *progenitor* of a child which has been conceived in an adul-  
302 terous relation. The law does not make any such claim; it does not assume a matter  
303 of fact, even though the opposite is certain. Rather it only regulates for certain  
304 reasons and to certain ends, that under certain circumstances the husband has *the*  
305 *same* duties and rights in relation to a child which was conceived by his wife in an  
306 adulterous relation and that this child has *the same* duties and rights in relation to  
307 this husband as they exist between the husband and his own children which were  
308 conceived in wedlock. Now if the law uses the phrase, that the husband under  
309 given circumstances is treated “as father” of the illegitimate child, that he is to be  
310 treated “as if” he was the legitimate father, then this is nothing but the abbrevi-  
311 ated formulation of a legal norm. No opposition to actuality is therein in any way  
312 posited. After all, one can, without committing such a contradiction to reality,  
313 even claim in terms of legal theory that the husband *is* the father in a legal sense,  
314 that he is the “legal” “father” of the illegitimate child, as long as by means of the  
315 term “father” one constructs a specific legal concept, i.e. the subject of particular  
316 duties and rights, *personification of a particular complex of norms*. A fiction in  
317 the sense of a contradiction to actuality would only emerge if one identified this  
318 legal notion of a “father” with the *natural object* of the male *progenitor* who bears  
319 the same name. Such a fiction, however, would be *plainly* mistaken, harmful and  
320 completely unnecessary. It would be the same fiction as the one characterised  
321 above in the hypostatisation of the legal person into the natural fact of *man*, or  
322 the “real” organism. And in this case it would be a fiction of legal theory, i.e. of  
323 an activity directed at the *cognition* of the law, and not of the legislators, whose  
324 activity is directed at the *creation* of the law.

325 One of the greatest achievements of Vaihinger’s analysis is the insight into the  
326 deep relation between the mathematical method and the conceptual technique of  
327 legal science.<sup>24</sup> However, the complete identification of in particular the *legisla-*  
328 *tive* fiction with the fictions of mathematics surely is mistaken. “The similarity of  
329 method of both sciences is not limited to their basic concepts, which in both fields  
330 are of purely fictitious nature, but equally shows in their entire methodological pro-  
331 cedures. As concerns the latter, what we have to deal with in both fields most of the  
332 time is to subsume a singular case under a universal, the determinations of which  
333 should only be applied to this singular. However, the singular resists this subsump-  
334 tion. For the universal is not comprehensive enough to comprehend the singular  
335 under itself. In mathematics we have to deal, for instance, with the case of having to  
336 subsume warped lines under the straight ones; after all, this has the great advantage  
337 of allowing us to make computations with them. In legal science we want to bring  
338 the single case under a law in order to apply the benefits and criminal sanctions of  
339 the latter to the former. Now, in both cases a *relation, which in actually does not*

---

<sup>23</sup> Ibid 258.

<sup>24</sup> Ibid 80, 251, 69 ff, 187.

340 *pertain* is seen to pertain: thus, for instance, the warped line is taken to be straight  
341 and the adoptive son is taken to be the actual son. A warped line never is straight  
342 and an adoptive son never is an actual son; or, to take another example: the circle  
343 should be conceived of as an ellipse; in legal science the defendant who does not  
344 show up in court, is treated *as if* he submitted to the charge, and in case of demerit  
345 the appointed heir is treated *as if* he had died before the deceased testator.<sup>25</sup> How-  
346 ever, Vaihinger seems to overlook the fundamental difference between the thought  
347 processes of mathematics and the formulations of the legislator: it is true, in both  
348 cases we want to subsume a single case under a universal norm or concept, where,  
349 however, the norm or concept is not universal, not broad enough to capture the  
350 single case in question. But what does the legislator do? He simply *broadens* the  
351 norm, he extends it to the new case—and he does so without any fiction, without  
352 any contradiction to actuality. The new case relates to the extended norm in no  
353 way differently than any other case relates to the norm regulating it. The intended  
354 relation *is* established; within the field of law this relation it is *not* a relation which  
355 “cannot in actual reality be established”, but it is effectively established in the “ac-  
356 tuality” of the law. In contrast, mathematics claims that the circle is an ellipse and  
357 that the warped line is straight and thereby sets an opposition to reality. However,  
358 the law does *not* claim—after all it does not claim anything—that the adoptive son  
359 is an actual son, that the defendant who does not show up has actually submitted to  
360 the charge, or that the unworthy heir died before the testator. It only “claims”, i.e.  
361 it posits—and this positing stands in opposition *to nothing*—that the same norms  
362 apply to the adoptive son as apply to the actual son—just as it posits that certain  
363 norms apply to men and women alike irrespective of their gender difference—and  
364 it posits, that the failure of the defendant to appear in front of a court has the same  
365 legal consequences as the acceptance of the claim, etc.

366 Similarly, no true fiction can be found in the principle of English law, which  
367 Vaihinger uses as an example of a fiction: the king can do no wrong.<sup>26</sup> The king  
368 “truly” can do no wrong insofar as the legal norm withdraws its validity in relation  
369 to him. After all, “wrong” is no natural fact. A “wrong” is a matter of fact only in its  
370 relation to a legal norm, only by means of the fact that it is included as content in a  
371 prescriptive norm, or as a condition in a legal norm that prescribes punishment or  
372 a sanction. Insofar as the legal order does not forbid acts or omissions of the king,  
373 insofar as it does not make them conditions of punishment or a sanction, *there is* no  
374 wrong of the king. The principle of Austrian and German law, which is analogous  
375 to the English principle, i.e. the monarch is immune, simply creates the legal fact,  
376 to which alone a legal fiction could stand in opposition. The *mistaken view*, that a  
377 wrong would be a natural fact, that murder was a legal wrong, even when it were not  
378 forbidden by law or threatened by a sanction, creates the opinion that the mentioned  
379 legal principles, which only limit the applicability of the legal order in certain ways,  
380 are fictions because they could come into contradiction with actuality.

---

<sup>25</sup> Ibid 70.

<sup>26</sup> Ibid 697.

381 It seems that Vaihinger did actually have a sense of the difference between the  
382 “fictions” of the legislator and the mathematical fictions. He obfuscated this dif-  
383 ference for himself by first correctly juxtaposing legal *science* and mathematical  
384 cognition, then, however, by dealing with constructs of the *legislator* and not of le-  
385 gal science. He states: “It is, however, much easier for legal science to deal with its  
386 fictions than it is for mathematics: in the case of legal science actual facts stand in  
387 opposition to arbitrary legal rules; thus, a transformation is quite easy. One simply  
388 has to think that the matter were as such.” However, here we do not have to deal  
389 with a “transformation” at all; the legislator—and with him everyone applying the  
390 law—does not “think” that the matter were as such, he rather *decrees* whatever he  
391 wishes. This is how the “matters” become actually, i.e. legally, as they are. Within  
392 his realm, the legislator is almighty, since his function rests in nothing but his abil-  
393 ity to tie certain legal consequences to legal conditions. A fiction of the legislator  
394 would thus be as impossible as a fiction of nature itself. After all, the law could only  
395 be opposed to itself—i.e. to its own reality. This, however, would be nonsensical.

396 The opposition which is posited in the fictions of legal science (which have to be  
397 distinguished from “fictions” which are mere abbreviations within legal parlance)  
398 can occur only in relation to the legal order, to the law as the object and thus to what  
399 counts as the “actuality” of legal science. As soon as it is translated into an actual  
400 statement, the construct created by legal science, i.e. the ancillary concept, has to  
401 imply a claim which stands in opposition to the legal order, which cannot be de-  
402 duced from the legal order. Such a case has been exemplified above in the concept  
403 of the person. Such a contradiction to the legal order is, of course, impossible in the  
404 case of the fictions of the legislator, it is only a superficial semblance created by  
405 mere use of certain words.

406 We can see from the following example of the praetorian fiction of Roman Law  
407 that Vaihinger himself actually had the opposition to the legal order in mind when  
408 he spoke of juridic fictions. He quotes Pauly’s *Realenzyklopädie des klassischen*  
409 *Altertums*, III, p. 473: “The Romans called *fictio* a *facilitation of the circumvention*  
410 *of the law* allowed by praetorian law, which consisted in the license that under cer-  
411 tain circumstances some condition demanded by strict law can be considered to be  
412 fulfilled, even though it has not actually been fulfilled. Thereby certain legal con-  
413 sequences ensue, even though the conditioning facts have not occurred in the way  
414 demanded by the law” Vaihinger comments as follows: “This explanation *mutatis*  
415 *mutandis* *neatly* fits the *scientific* fiction in the narrower sense; here, too, a *facili-*  
416 *tation and circumvention of difficulties* takes place, which here, too, is a conse-  
417 quence of the very complex state of affairs: here, too, the demands of the *strict laws*  
418 of logic are circumvented, here, too, consequences and practical conclusions occur,  
419 which are *correct*, despite that which is presupposed is itself *incorrect*.” However,  
420 neither Pauly’s description of the “*fictio*”, nor Vaihinger’s conclusions drawn from  
421 it are entirely correct. The conclusions drawn depend on the claim that the Praeto-  
422 rian fiction is a “circumvention of law”, and that it posits an opposition to what the  
423 law demands. However, this is not the case, as the Praetor himself is a legislative  
424 organ, since he—by means of *constitutional* law—does not only apply the law, but  
425 he creates it. Now, if the Praetor allows a peregrinus to institute legal proceedings

426 which according to the *ius strictum* only a *civis* can do *as if* he were a *civis*, this  
427 means nothing but the following: a *legal* norm has been posited, in which certain  
428 rights and duties of the *civis* are extended to the *peregrinus* and this legal norm  
429 can be formulated without any reference to an ‘As-If’ and without any fiction: the  
430 *peregrinus* is allowed to levy the claim just as the *civis* is. The “consequences and  
431 practical conclusions” which here occur, are not “correct”, *despite* the conditions  
432 being incorrect, but only *because* the conditions, too, are “correct”, i.e. lawful, and  
433 are in line with the new legal rule created by the Praetor. The mistake made here is  
434 to take the strict *ius civile* as the only element of the legal order, just as if the Prae-  
435 torian law—as fully valid, objective law—were not part of it. The right to institute  
436 an action by the *peregrinus* cannot contradict the legal order, since it itself rests on  
437 one of its rules! However, at least one fiction can be uncovered here: the fiction that  
438 the Praetor does not *make* law, but that he only *applies* the law. As someone merely  
439 applying the *jus civile* the Praetor, in granting the *peregrinus* the right to institute  
440 an action which only the *civis* has, would set a contradiction to the legal order  
441 which consisted entirely in the *jus civile*. And this contradiction which occurs in  
442 the *application of law* would have to hide beneath a fiction. This fiction, however,  
443 does not consist in the claim that the *peregrinus* actually is a *civis*, but in the claim  
444 that the legal order also grants the right to institute an action to the *peregrinus*. The  
445 Praetor in no way denies the difference between the *civis* and the *peregrinus* in  
446 general. He only denies it—insofar as he presents himself as someone applying the  
447 law—in terms of standing, i.e. he claims: the *peregrinus*, too, has standing. How-  
448 ever, this fiction becomes superfluous, nay, impossible, in the very moment that  
449 the other fiction falls away, the fiction that treats the Praetor as someone merely  
450 applying the law and not as a delegated legislator.

#### 451 1.4 III

452 From what has been said so far it should emerge that as concerns the possibil-  
453 ity of a fiction—which depends on the possibility of a contradiction to the legal  
454 order—the application of the law differs from legislation. In relation to the legal  
455 norms someone applying the law actually does face a situation very much like the  
456 one mathematics faces in relation to concepts like circles, ellipses, the warped or  
457 straight line, etc. The judge, the businessman, cannot arbitrarily extend and restrict  
458 the legal norms, in other words: they cannot tie arbitrary legal consequences to arbi-  
459 trary legal conditions. If one wishes to subsume a certain case under a norm, which  
460 does not capture this case, then a fiction may seem expedient: to treat the case *as*  
461 *if* it fell under the legal norm. If the law threatens a sanction for the damaging of a  
462 public telegraph, but leaves a similar damaging of a public telephone without threat  
463 of sanction, or if it threatens the delict with—in the view of the person or organ  
464 applying the law—too mild a sanction, then it is a fiction if the judge applies to  
465 someone who damages a public telephone a sanction, which the law had intended  
466 only for someone damaging a public telegraph, in that he uses the norm intended

467 to protect the telegraph to protect the telephone; the judge here does not proceed  
468 *as if* the telegraph were a telephone, this is not what the judge claims and wants to  
469 claim, but he proceeds as if the law threatened the same sanction to a damaging of  
470 a telephone as it does to the damaging of a telegraph. The juridic fiction can only  
471 involve a fictitious *legal* claim, and not a fictitious *actual* claim. After all, the judge  
472 has to explicitly determine the facts and must not ignore that a *telephone* and not a  
473 telegraph was damaged. His claim, which stands in opposition to the *legal* order and  
474 not to actual reality, is: the public telephone, too, *must* not be damaged. Claiming  
475 the validity of an—invalid—general norm is the means by which he reaches the cor-  
476 rect judgement, at least the one intended by him. It is not the claim that a telephone  
477 is a telegraph.

478 The fact that the application of the law can include legal fictions, derives from  
479 the fact, that it itself presupposes legal *cognition*, or, put more correctly, that the  
480 compound act of legal application includes an element of legal *cognition*. However,  
481 it has to remain doubtful whether these fictions of the application of the law—which  
482 are identical with the cases of interpretation by means of *analogy*—are similar to  
483 the epistemological fictions in the sense that the latter reach a *correct* conclusion—  
484 and be it by means of an explicitly incorrect idea. After all, the “correctness” of  
485 legal application can only mean *legality*, and not utility. The fiction that the warped  
486 line is a straight line is a mathematically correct result. It would have to be a legally  
487 correct, i.e. a lawful result which is reached by means of the analogous-fictitious  
488 interpretation. Now, the legality of this result can only be measured against the legal  
489 order itself; however, the *contradiction* to the legal order in the case of a fictitious-  
490 analogous application of law is not merely a provisional, correctible one, but a  
491 definite one, one which cannot be corrected in due course. Now, Vaihinger claims  
492 as a central feature of the fiction, “that these (fictitious) concepts either historically  
493 become obsolete or logically fall away.” “Insofar as we deal with an opposition to  
494 actual reality, a fiction can only be of value as long as it is employed provisionally  
495 ...” And he says particularly about semi-fictions: “That is why ... a *correction* has  
496 to step in; since without such a correction they would not be applicable to the actual  
497 world.<sup>27</sup> Of the juridic fictions, however, he claims that such a correction is not nec-  
498 essary. After all, in this case we do not deal with the exact estimation of actual real-  
499 ity, but with the subsumption under an arbitrary law, a human artifact, not a natural  
500 law, not a natural relation.<sup>28</sup> However, it is thereby by no means established that the  
501 correction of juridic fictions in case of the *application of the law* is superfluous! For  
502 the intellectual activity that makes use of the juridic fiction (fictions of legislation  
503 as well as the fictions of the application of law) cannot be seen to be an estimation  
504 of *actual reality*. This, however, can only have the consequence that there is no need  
505 for an opposition to actual reality and for an epistemological fiction in Vaihinger’s  
506 sense. Insofar as epistemological fictions are possible as “juridic” fictions, they  
507 can only be fictions of the cognition of the law. And for them the contradiction,  
508 which constitutes the essence of a fiction, relates to the legal order, which is the

---

<sup>27</sup> Ibid 172/73.

<sup>28</sup> Ibid 197.

509 “actual reality”, the object of cognition of legal science. *This kind* of contradiction,  
510 however, is just as much and just for the same reasons in need of correction, as the  
511 *analogous* contradiction in the case of physical, mathematical or otherwise (in the  
512 broader sense) scientific fictions, since without such a correction the juridic fic-  
513 tion would be just as inapplicable to the legal order, i.e. to the actuality of juridic  
514 cognition, as the other fictions would be inapplicable to nature. The fictions of the  
515 *application of law*—i.e. the analogical interpretation—, conversely, sets an *irresolv-*  
516 *able* opposition to the legal order. It is not a detour, which in the end leads us to  
517 the “actuality” of the law, but an error, which might lead to what the feigning actor  
518 thinks helpful and expedient, but which never leads to the object of legal science:  
519 *the law*. For this very reason, the *justification* of this kind of juridic fiction, i.e. the  
520 fiction of the application of law, has to be seen to be theoretically impossible. This  
521 needs to be expressly stressed since Vaihinger wants to include in particular these  
522 juridic fictions as *equal* and *equivalent* phenomena into his system and his theory of  
523 fictions, which, after all, by and large intends to be an apology of fictions.

524 However, what needs to be considered is that in fact such an inadmissible fiction  
525 *only* occurs, as soon as an undeniable and irresolvable opposition to the legal order  
526 is posited. This is *not* the case in all of those instances of analogical applications of  
527 law where the legal order allows for, indeed under certain circumstances requires,  
528 an analogy. Now, whether this is expressly stipulated in a legal norm, like, for in-  
529 stance, in Article 7 of the Austrian Civil Code, or whether one relies only on a norm  
530 of customary law or—in the cases in which one does not rest one’s claim on positive  
531 law—on a natural principle of law, does not matter, since an opposition to the legal  
532 order—and thus a fiction—is impossible as soon as the legal order itself allows for  
533 the application of the analogy and thus also demands the decision reached by means  
534 of the analogy. One should not forget that no jurist, who declares the analogy to be  
535 admissible, will ever decline to let the decision reached by analogous interpretation  
536 be called *law*. This, however, means: the statement, which demands the analogy,  
537 has to be claimed to be a *legal norm*. The establishment of the existence of such a  
538 legal norm is, of course, an entirely different matter. In the light of legal theory a  
539 fiction of the legislator is thus impossible, a fiction of someone applying the law is  
540 completely inadmissible, since it is *in violation of the purpose of the law*.

## 541 1.5 IV

542 In order to demonstrate that the fictions of the application of the law do not belong  
543 within Vaihinger’s system of fictions, it needs to be stated, that *cognition* of law—  
544 which alone can lead to a fiction in the true sense of the term—only plays a subor-  
545 dinate role in the application of law. It is not the essence, the actual purpose of this  
546 activity, but only the means by which it reaches its goal. The application of law, just  
547 as the creation of law, does not really intend the cognition of law, but its realisation,  
548 it is about *acts of the will*. The cognition of law, the *theory* of law, only prepares the  
549 practice of the law, it creates the tools for the latter.

550 Now, Vaihinger may himself have made a distinction between legal *theory* and  
551 legal *practice*.<sup>29</sup> However, he overlooked the principled difference between the truly  
552 epistemological fictions of legal *science* and the pseudo-fictions of legal practice.  
553 What is more, Vaihinger nearly exclusively concerned himself with the so-called  
554 “fictions” of legal practice. Still, at least some fictions of legal theory can be found  
555 in his work. Unfortunately, they are most of the time only sketched out by a catch-  
556 word and presented without further analysis. He especially missed out on an analy-  
557 sis of the legal person in general and of the legal person of the state in particular.<sup>30</sup>  
558 The fictions of “freedom” and of the “social contract” establishing the state, which  
559 Vaihinger also deems necessary for the establishment of public criminal law, are  
560 not fictions of legal theory, but ethical fictions. The “right” of the state, to pun-  
561 ish, demands a moral, and not a juridic justification; and the freedom of the will  
562 as a foundation of this right is by no means a *necessary* ethical fiction. Since the  
563 principle of general prevention or deterrence, too, which Vaihinger mentions, is a  
564 justification of punishment, which rightfully exists without any fiction of freedom.  
565 The “fiction” of freedom only emerges when one mistakenly applies a normative  
566 category to the—causally determined—natural reality, when one illicitly and syn-  
567 cretistically combines an is with an ought, a syncretism which, at least for the sake  
568 of juridic cognition, is certainly superfluous. One acts or is going to act in a certain  
569 way (consideration of is), only if one *can* act in this way, or if one *must* act in this  
570 way. The statement which declares that a certain act actually *will happen* (in the  
571 future), even though this act has been seen to be impossible, posits a contradiction  
572 to the object it tries to capture in the statement: to actual reality; it is thus inad-  
573 missible and worthless. However, the statement: someone *ought* to act in a certain  
574 way, never posits a contradiction—be it to actual reality, or to any other object of  
575 cognition—not even in the case in which the action, which ought to be performed,  
576 appears to be impossible. Only if one ignores the difference between is and ought  
577 (as two distinct forms of cognitions) and takes the *possibility of being actual* as a  
578 conditions of an ought-statement, only then the illusion is created that there existed  
579 a contradiction between the statement, which posits that something *ought to be*,  
580 and the statement, which claims as a *matter of fact* that this something is actually  
581 impossible; only then the following error emerges: that a certain content (the action  
582 which ought to occur) has to be *actually* possible, the actor thus has to be *feigned to*  
583 *be free*, in order to make possible the statement of ought, and thereby to simultane-  
584 ously make possible the duty to act and maybe even the duty to act differently than  
585 one actually acts, differently than one actually must or can act. A methodological  
586 error leads to the fiction of freedom, which becomes superfluous as soon as one  
587 acknowledges this error. This is the only way to explain the curious fact that a strict  
588 opposition between the freedom within ethics and jurisprudence, on the one hand,  
589 and the un-freedom within natural science, on the other, could emerge, yet could at  
590 the same time be ignored by both sides. The ethical fiction of freedom thus is useful  
591 and necessary only as long as the adequate methodological insight is absent. And it

---

<sup>29</sup> Ibid 257.

<sup>30</sup> Ibid 259.

592 is in this way that Vaihinger's second main characteristic of the fiction must seem  
593 so very fitting: "If there is a contradiction to actual reality, the fiction can only be of  
594 value if it is used provisionally. Until experience is enriched, or until the methods of  
595 thought are sufficiently sharpened, to be able to replace these provisional methods  
596 with definite ones."<sup>31</sup>

597 Vaihinger does not capture the fiction of the social contract establishing the state  
598 correctly, when he claims: "The state does not want to base its coercive law on mere  
599 might, not even on purely utilitarian grounds, but it wants to establish it as true  
600 right: this, however, is possible only by means of the fiction of a contract: after all,  
601 the jurist knows of no other rights than those emerging from contracts." However,  
602 the fiction of the social contract establishing the state, just as the fiction of freedom,  
603 does not actually serve the *juridic* justification of the coercive functions of the state.  
604 After all, such a juridic justification contains nothing but the fact that something is  
605 derived from a juridic norm. However, what is demanded here is the justification of  
606 the legal norm, i.e. of the norm which orders the infliction of coercion itself. This  
607 justification is effected by means of a higher, extra-legal norm: the moral or "natu-  
608 ral" fundamental principle: *pacta sunt servanda*. *This is the reason why* the contract  
609 has to be feigned, and not because the jurist allegedly knows no other law than that  
610 which emerges from contract. Moreover, the latter statement is factually mistaken.  
611 The contract is but one of many matters of facts, to which the legal order attaches  
612 rights and duties.

613 The social contract establishing the state thus is in fact no fiction of legal theory,  
614 but an ethical fiction, a fiction of a moral world-view. A jurisprudential perspective  
615 has to drop precisely such a fiction and the imagination of an ethical justification  
616 of the law.

## 617 1.6 V

618 After all, legal science—as cognition of a particular object—can only be possible if  
619 one assumes the *sovereignty of the law* (or, which is the same, of the state), i.e. if one  
620 takes the legal order as an independent system of norms which is not dependent on  
621 any higher order. Otherwise only a moral science (ethics) or theology would be pos-  
622 sible, depending on whether one takes the law to be a result of morality or religion.  
623 (As long as we consider the law to be an order, a complex of norms, we do not need  
624 to consider here a possible natural science or sociology of law, which clearly would  
625 also have to be considered a science of law). Now, Vaihinger thinks that a fiction lies  
626 precisely in this separation of law from morals. The als. The "fictitious isolation",  
627 that occurs in the positivistic view (i.e. in a view which presumes the law to be an  
628 independent, sovereign order), was "the provisional departure from an integrated  
629 part of reality."<sup>32</sup> Vaihinger thinks that for the legislator and jurist the separation

---

<sup>31</sup> Ibid 17.

<sup>32</sup> Ibid 375.

630 of law and morality as two distinct realms might be of high value, however, one  
631 should not forget, that here the “in fact” had to be replaced by an “as-if”. “Since,  
632 however one wants to determine the relation of these two very important areas of  
633 life, one can hardly reach the conclusion that these two, as a matter of fact, have no  
634 relation to each other whatsoever. This comment is of particular importance, as due  
635 to a lack of methodological insight jurists regularly take this fiction to be an actual  
636 relation, which is a disastrous error. The one-sided approach can do many a good  
637 service to legal science and the practical life of the law, however, at a certain point  
638 the abstraction, which has been provisionally made, always needs to be replaced  
639 with full actual reality being reinstated.”<sup>33</sup> However, this view cannot—especially  
640 not from the point of view of Vaihinger’s own theory of fictions—be agreed with.  
641 After all, the claim that the law was a system of norms which is independent from  
642 morality, which in its normative validity is not reducible to an ethical order, can for  
643 the very reason not be a “provisional” departure from an integrated part of reality, as  
644 nether law nor morality—both being considered as complexes of norms—are part  
645 of the realm of that actuality, which for Vaihinger is the benchmark from which the  
646 fiction departs, and which is identical with nature, with the world of the senses, and  
647 as neither legal science nor ethics try to capture this actuality in their objects. The  
648 relation of law and morality is in no sense a relation between two “realms of life”  
649 as two parts of *natural* reality. Their “actual” relation is no relation in actuality, i.e.  
650 in reality which can be captured by natural science understood in the broadest sense  
651 and also including social sciences. The juridic perspective which Vaihinger accuses  
652 of committing a fictitious isolation, cannot depart from an integrated part of actual-  
653 ity, not even in determining the relation of its object to morality, since it does not  
654 even have actuality in view. However, insofar as law and morality are considered  
655 as—social—facts, as “actual” going-ons in nature (and it remains an open question  
656 whether this is at all possible), they are not objects of specific juridic cognition, or  
657 of normative ethics. And in this sense the related fictitious isolation cannot take  
658 place at all. There is no need for it at all. For an inquiry of the actuality of the so-  
659 called experience of law, of the factual moral ideas and the “moral” actions effected  
660 by them—its methodological possibility simply assumed—law and morality are  
661 something completely different than what these two same words denote as objects  
662 of normative legal science and ethics. And for an act of cognition aiming at actual  
663 psychological facts and actions there can be no fundamental difference between an  
664 actuality called “law” and an actuality called “morality”, and certainly no expedi-  
665 ency of a fictitious isolation of both, and be it only a provisional one. Vis-a-vis a  
666 juridic perspective such a “full actual reality” can never be “given back its rights”.

667 Now, for Vaihinger the representation of a legal order—as a complex of norms of  
668 ought—just as the representation of a moral order appears as a fiction. According to  
669 him concepts like norm, duty, the ideal etc. have to be subsumed under the class of  
670 practical fictions.<sup>34</sup> Now, even though Vaihinger does not extensively engage with  
671 the concept of a legal norm, of the legal ought and of the legal duty, etc. it should

---

<sup>33</sup> Ibid 375.

<sup>34</sup> Ibid 59 ff.

672 be assumed that we can say the same about them as we can say about the ethical  
673 concepts, which Vaihinger all expresses as fictions. Thus, one could say with Vai-  
674 hinger: the jurist treats the law, *as if* it were a sum of ought-norms. However, *if* this  
675 is a fiction, if the law *in actuality* is not an ought-norm, what *is* the law “in actual-  
676 ity”? And moreover: What *is* an ought-norm? Put differently: if the assumption that  
677 the law as an ought-norm is a fiction, then the law needs to be able to be something  
678 else, something “actual”, and then the “ought-norm” has to be something “actual”,  
679 however, it has to be something else than the law “actually is” and the ought-norm  
680 must not itself in turn be a fiction. Since the fiction obviously consists in a likening,  
681 i.e. in the erroneous identification of something actual with something else which is  
682 actual. To put it in the formula of a fiction: X is treated, *as if* it were Y (even though  
683 X is not Y); this means, however, that both X and Y have to be actual, or they have  
684 to be claimed to be actual. It is not their existence but only the identification which  
685 is fictitious. In Vaihinger the formula of fiction is the following: “In this formula it  
686 is stated, that some given actual entity, some particular thing was *likened* to some-  
687 thing else, the impossibility or non-reality of which is at the same time claimed ...  
688 e.g. in the juridic fiction the formula is as follows: this heir is to be treated as he  
689 would have been treated had he died before his father, the bequeather, i.e. he is to be  
690 disinherited” What is relevant in this context is only the insight that both elements,  
691 the “heir” and “the one having died before the bequeather” in and for themselves,  
692 i.e. irrespective of their position in the relationship of the fiction, are something *ac-*  
693 *tual*. Vaihinger continues: “What is expressed here is, first and foremost, a *likening*,  
694 i.e. the invitation to perform a likening or a subsumption; such a statement initially  
695 claims nothing else but the following: man is to be considered as a gorilla. But why  
696 should he be considered as such? Simply because he is like a gorilla. All other cases  
697 are like this one: we are invited to liken something to something else, however,  
698 together with this invitation we are also made aware that the likening rests on an  
699 *impossible condition*; however, instead of declining to undertake the likening, it is  
700 nevertheless still performed, albeit for other reasons.<sup>35</sup> The fiction consists in the  
701 likening of two actualities, despite the impossibility of this likening.

702 However, the law from the very beginning is nothing actual. There is no part of  
703 natural reality which can be called law. And even if one wanted to disregard this  
704 fact, and wanted to still consider the law, *as if* it were an ought-norm, the question  
705 emerges, what an ought-norm actually *is*? Well, nothing actual, but itself a fiction.  
706 And the fiction here does not only consist in the ‘as-if’ formula, but also in that, to  
707 which the law is likened by means of a fiction. The fiction, the fictitious statement,  
708 claims—in the statement which starts with the as if—the actuality of something  
709 (and be it in opposition to the latter). The analysis of every fiction has to lead to cer-  
710 tain elements of actual reality, which may be erroneously connected, but still exist;  
711 the fiction has to be resolvable, or otherwise it hovers in mid air.

712 Thus it has to appear as if the characteristics of the concepts of a fiction, which  
713 Vaihinger himself established, do not really fit his “practical fictions”. Basically,  
714 Vaihinger had to declare *all* ethical concepts to be fictions. He does so explicitly as

---

<sup>35</sup> Ibid 164/65.

715 concerns the concepts of the ethical world order, of duty, the ideal and some others.  
716 However, in the case of all these concepts precisely that element, which according  
717 to Vaihinger is essential to the fictions, is missing: the contradiction to actual reality.  
718 After all, a contradiction to actual reality can only exist, when something actual is  
719 claimed, when something actual is at all to be known. Vaihinger states: "The ideal  
720 is a conceptual construct which is both inherently contradictory and stands in con-  
721 tradiction with actual reality, which, however, has tremendous, world-transcending  
722 value. The ideal is a practical fiction."<sup>36</sup> This could be said of any ethical or juridic  
723 concept, since it can be said of the concept of the *ought*, which is identical with the  
724 *formal* concept of the ideal. However, where can we find the contradiction with  
725 actual reality in any ought-statement, even in one which has something actually  
726 impossible as its content? The statement which expresses an ideal, a duty, an ethical  
727 demand: e.g. X ought to be charitable, and the statement describing actual reality:  
728 e.g. X is not charitable, are not contradicting each other in any way. Even if one  
729 concedes—and one has to concede this—that everything which happens, *has to*  
730 happen as it happens, and *cannot* happen otherwise, so that any ought which has  
731 a different content than the is would demand something *impossible*, no contradic-  
732 tion between is and ought would be present. The fact of *a* is only contradicted by  
733 the fact of *non-a* and not by the ought of *non-a*. Unless one wanted to resolve the  
734 ought-statement into an as-if-statement and claimed that in saying that *a* ought to  
735 be, I act as if *a* were the case; and if I claim: X ought to be charitable, I feign X (in  
736 thought) as actually being charitable, even though in reality he is not charitable.  
737 Ought would then be a feigned is. However, this view is obviously incorrect. In the  
738 representation of ought we make use of a form completely different from the repre-  
739 sentation of an is, a form which can take any arbitrary content without getting into  
740 logical opposition to any representation of an is, which has an opposing content.  
741 Rather than calling the ought a feigned is, I could, with the same legitimacy, call the  
742 is a feigned ought. This is why a normative concept can be inherently contradictory,  
743 however it cannot possibly contradict reality. After all, normative cognition is not  
744 directed at actual reality at all. Of course, within normative cognition fictions can  
745 very well exist, i.e. concepts can exist that are opposed to the specific object of cog-  
746 nition. However, this object of cognition itself and the entire activity of cognition  
747 cannot be called fictions. The concepts "god and conscience" may be fictions. The  
748 "ought", the "duty" and the "norm" certainly cannot. This is clearly shown, as soon  
749 as one tries to present the "fiction" of a duty in an "as if" statement: we ought to act  
750 as if it were our duty to act in a certain way. However, already in the first clause: we  
751 ought to act, we find included the assertion of a duty. The statement would thus be:  
752 we are *under a duty* to act as if we were under a duty. Duty and ought are identical.  
753 However, does the statement: we ought to act in a certain way, have the meaning of  
754 a fiction? It would indeed have such a meaning if we were to claim: we act in such  
755 a way, even though we do *not* act in such a way. However, precisely this assertion is  
756 not involved, but rather the following: we *ought to* act in such a way, even though  
757 maybe we do not act in such a way.

---

<sup>36</sup> Ibid 67.

758 It is an entirely different question, whether and how the claims expressed in  
 759 ought-statements can be demonstrated or proven, whether not every system of  
 760 norms was ultimately based on a basic ought statement which is not provable. This  
 761 can be conceded without thereby conceding the character of a *fiction*, i.e. of a con-  
 762 tradiction to actuality (as natural reality).

763 The concept of the ought—and with it the concepts of a duty, of a norm, of  
 764 the ideal, of (objective) value—could be called fictions, would we not by a fiction  
 765 understand a construct which serves the cognition of actual reality, and at the same  
 766 time posits a *contradiction* to precisely this actual reality. And ought statements—  
 767 the ethical just as the legal—are “fictions” only if by a fiction we understand ev-  
 768 erything which is not the expression, and particularly a consistent expression, of  
 769 *natural* reality. So, even if we can concede to Vaihinger that legal norms—just as  
 770 the entire world of the ought—are imaginative products of the human mind, phan-  
 771 tasy constructs which have to be contrasted from the empirical world of the natural  
 772 being,<sup>37</sup> a contradiction to this actuality, which is the first of his “basic features”,  
 773 by which one can “immediately detect every fiction”,<sup>38</sup> by no means becomes nec-  
 774 essary. It is precisely in the category of the ought that a form is being created, in  
 775 which the phantasy can unfold without any contradiction to actual reality. On the  
 776 other hand the world of the ought has to count as an object of (ethical and juridic)  
 777 cognition, as its own variety of actual reality, which, albeit different from, must  
 778 nevertheless be seen as equal with, natural reality, if there is to be a *true* fiction.

779 Vaihinger has thus illustrated his brilliant theory by precisely those juridic fic-  
 780 tions (i.e. those of legislation and application of the law), the discovery of the nature  
 781 and cognitive value of which on closer inspection cannot be seen to be his greatest  
 782 merit. On the other hand, legal science knows of other, by all means analogous  
 783 auxiliary concepts. However, it is not legal science which sheds a light on those  
 784 fictions—as Vaihinger thinks—but vice versa: the true, theoretical fictions of legal  
 785 science become more comprehensible only through the fictions of mathematic and  
 786 other sciences. The fictions of legal theory have nothing specifically juridical to  
 787 them at all, they do not constitute a method characteristic to legal science.
