Preface **xiii**

I Basics **1**

1 Optimization Models **3**
1.1 Introduction . . . 3
1.2 Optimization: An Informal Introduction . . . 4
1.3 Linear Equations . . . 7
1.4 Linear Optimization . . . 10
Exercises . . . 12
1.5 Least-Squares Data Fitting . . . 12
Exercises . . . 14
1.6 Nonlinear Optimization . . . 14
1.7 Optimization Applications . . . 18
1.7.1 Crew Scheduling and Fleet Scheduling . . . 18
Exercises . . . 22
1.7.2 Support Vector Machines . . . 22
Exercises . . . 24
1.7.3 Portfolio Optimization . . . 25
Exercises . . . 27
1.7.4 Intensity Modulated Radiation Treatment Planning . . . 28
Exercises . . . 31
1.7.5 Positron Emission Tomography Image Reconstruction . . 32
Exercises . . . 34
1.7.6 Shape Optimization . . . 35
1.8 Notes . . . 40

2 Fundamentals of Optimization **43**
2.1 Introduction . . . 43
2.2 Feasibility and Optimality . . . 43
Exercises . . . 47
2.3 Convexity . . . 48
2.3.1 Derivatives and Convexity . . . 50

Exercises . . . 52
2.4 The General Optimization Algorithm . . . 54
Exercises . . . 58
2.5 Rates of Convergence . . . 58
Exercises . . . 61
2.6 Taylor Series . . . 62
Exercises . . . 65
2.7 Newton's Method for Nonlinear Equations . . . 67
2.7.1 Systems of Nonlinear Equations . . . 72
Exercises . . . 74
2.8 Notes . . . 76

3 Representation of Linear Constraints **77**
3.1 Basic Concepts . . . 77
Exercises . . . 82
3.2 Null and Range Spaces . . . 82
Exercises . . . 84
3.3 Generating Null-Space Matrices . . . 86
3.3.1 Variable Reduction Method . . . 86
3.3.2 Orthogonal Projection Matrix . . . 89
3.3.3 Other Projections . . . 90
3.3.4 The *QR* Factorization . . . 90
Exercises . . . 91
3.4 Notes . . . 93

II Linear Programming **95**

4 Geometry of Linear Programming **97**
4.1 Introduction . . . 97
Exercises . . . 98
4.2 Standard Form . . . 100
Exercises . . . 105
4.3 Basic Solutions and Extreme Points . . . 106
Exercises . . . 114
4.4 Representation of Solutions; Optimality . . . 117
Exercises . . . 123
4.5 Notes . . . 124

5 The Simplex Method **125**
5.1 Introduction . . . 125
5.2 The Simplex Method . . . 126
5.2.1 General Formulas . . . 129
5.2.2 Unbounded Problems . . . 134
5.2.3 Notation for the Simplex Method (Tableaus) . . . 135
5.2.4 Deficiencies of the Tableau . . . 139

Exercises . . . 141
5.3 The Simplex Method (Details) . . . 144
5.3.1 Multiple Solutions . . . 144
5.3.2 Feasible Directions and Edge Directions . . . 145
Exercises . . . 148
5.4 Getting Started—Artificial Variables . . . 149
5.4.1 The Two-Phase Method . . . 150
5.4.2 The Big-M Method . . . 156
Exercises . . . 159
5.5 Degeneracy and Termination . . . 162
5.5.1 Resolving Degeneracy Using Perturbation . . . 167
Exercises . . . 170
5.6 Notes . . . 171

6 Duality and Sensitivity **173**
6.1 The Dual Problem . . . 173
Exercises . . . 177
6.2 Duality Theory . . . 179
6.2.1 Complementary Slackness . . . 182
6.2.2 Interpretation of the Dual . . . 184
Exercises . . . 185
6.3 The Dual Simplex Method . . . 189
Exercises . . . 194
6.4 Sensitivity . . . 195
Exercises . . . 201
6.5 Parametric Linear Programming . . . 204
Exercises . . . 210
6.6 Notes . . . 211

7 Enhancements of the Simplex Method **213**
7.1 Introduction . . . 213
7.2 Problems with Upper Bounds . . . 214
Exercises . . . 221
7.3 Column Generation . . . 222
Exercises . . . 227
7.4 The Decomposition Principle . . . 227
Exercises . . . 238
7.5 Representation of the Basis . . . 240
7.5.1 The Product Form of the Inverse . . . 240
7.5.2 Representation of the Basis—The *LU* Factorization . . . 248
Exercises . . . 256
7.6 Numerical Stability and Computational Efficiency . . . 259
7.6.1 Pricing . . . 260
7.6.2 The Initial Basis . . . 264
7.6.3 Tolerances; Degeneracy . . . 265
7.6.4 Scaling . . . 266

7.6.5 Preprocessing . . . 267
7.6.6 Model Formats . . . 268
Exercises . . . 269
7.7 Notes . . . 270

8 Network Problems 271
8.1 Introduction . . . 271
8.2 Basic Concepts and Examples . . . 271
Exercises . . . 280
8.3 Representation of the Basis . . . 280
Exercises . . . 287
8.4 The Network Simplex Method . . . 287
Exercises . . . 294
8.5 Resolving Degeneracy . . . 295
Exercises . . . 299
8.6 Notes . . . 299

9 Computational Complexity of Linear Programming 301
9.1 Introduction . . . 301
9.2 Computational Complexity . . . 302
Exercises . . . 304
9.3 Worst-Case Behavior of the Simplex Method . . . 305
Exercises . . . 308
9.4 The Ellipsoid Method . . . 308
Exercises . . . 313
9.5 The Average-Case Behavior of the Simplex Method . . . 314
9.6 Notes . . . 316

10 Interior-Point Methods for Linear Programming 319
10.1 Introduction . . . 319
10.2 The Primal-Dual Interior-Point Method . . . 321
10.2.1 Computational Aspects of Interior-Point Methods . . . 328
10.2.2 The Predictor-Corrector Algorithm . . . 329
Exercises . . . 330
10.3 Feasibility and Self-Dual Formulations . . . 331
Exercises . . . 334
10.4 Some Concepts from Nonlinear Optimization . . . 334
10.5 Affine-Scaling Methods . . . 336
Exercises . . . 343
10.6 Path-Following Methods . . . 344
Exercises . . . 352
10.7 Notes . . . 353

III Unconstrained Optimization **355**

11 Basics of Unconstrained Optimization **357**
11.1 Introduction . . . 357
11.2 Optimality Conditions . . . 357
Exercises . . . 361
11.3 Newton's Method for Minimization . . . 364
Exercises . . . 369
11.4 Guaranteeing Descent . . . 371
Exercises . . . 374
11.5 Guaranteeing Convergence: Line Search Methods . . . 375
11.5.1 Other Line Searches . . . 381
Exercises . . . 385
11.6 Guaranteeing Convergence: Trust-Region Methods . . . 391
Exercises . . . 398
11.7 Notes . . . 399

12 Methods for Unconstrained Optimization **401**
12.1 Introduction . . . 401
12.2 Steepest-Descent Method . . . 402
Exercises . . . 408
12.3 Quasi-Newton Methods . . . 411
Exercises . . . 420
12.4 Automating Derivative Calculations . . . 422
12.4.1 Finite-Difference Derivative Estimates . . . 422
12.4.2 Automatic Differentiation . . . 426
Exercises . . . 429
12.5 Methods That Do Not Require Derivatives . . . 431
12.5.1 Simulation-Based Optimization . . . 432
12.5.2 Compass Search: A Derivative-Free Method . . . 434
12.5.3 Convergence of Compass Search . . . 437
Exercises . . . 440
12.6 Termination Rules . . . 441
Exercises . . . 445
12.7 Historical Background . . . 446
12.8 Notes . . . 448

13 Low-Storage Methods for Unconstrained Problems **451**
13.1 Introduction . . . 451
13.2 The Conjugate-Gradient Method for Solving Linear Equations . . . 452
Exercises . . . 459
13.3 Truncated-Newton Methods . . . 460
Exercises . . . 465
13.4 Nonlinear Conjugate-Gradient Methods . . . 466
Exercises . . . 469
13.5 Limited-Memory Quasi-Newton Methods . . . 470

Exercises . . . 473
13.6 Preconditioning . . . 474
Exercises . . . 477
13.7 Notes . . . 478

IV Nonlinear Optimization **481**

14 Optimality Conditions for Constrained Problems **483**
14.1 Introduction . . . 483
14.2 Optimality Conditions for Linear Equality Constraints . . . 484
Exercises . . . 489
14.3 The Lagrange Multipliers and the Lagrangian Function . . . 491
Exercises . . . 493
14.4 Optimality Conditions for Linear Inequality Constraints . . . 494
Exercises . . . 501
14.5 Optimality Conditions for Nonlinear Constraints . . . 502
14.5.1 Statement of Optimality Conditions . . . 503
Exercises . . . 508
14.6 Preview of Methods . . . 510
Exercises . . . 514
14.7 Derivation of Optimality Conditions for Nonlinear Constraints . . . 515
Exercises . . . 520
14.8 Duality . . . 522
14.8.1 Games and Min-Max Duality . . . 523
14.8.2 Lagrangian Duality . . . 526
14.8.3 Wolfe Duality . . . 532
14.8.4 More on the Dual Function . . . 534
14.8.5 Duality in Support Vector Machines . . . 538
Exercises . . . 542
14.9 Historical Background . . . 543
14.10 Notes . . . 546

15 Feasible-Point Methods **549**
15.1 Introduction . . . 549
15.2 Linear Equality Constraints . . . 549
Exercises . . . 555
15.3 Computing the Lagrange Multipliers . . . 556
Exercises . . . 561
15.4 Linear Inequality Constraints . . . 563
15.4.1 Linear Programming . . . 570
Exercises . . . 572
15.5 Sequential Quadratic Programming . . . 573
Exercises . . . 580
15.6 Reduced-Gradient Methods . . . 581
Exercises . . . 588

15.7 Filter Methods . . . 588
Exercises . . . 597
15.8 Notes . . . 598

16 Penalty and Barrier Methods 601
16.1 Introduction . . . 601
16.2 Classical Penalty and Barrier Methods . . . 602
16.2.1 Barrier Methods . . . 603
16.2.2 Penalty Methods . . . 610
16.2.3 Convergence . . . 613
Exercises . . . 617
16.3 Ill-Conditioning . . . 618
16.4 Stabilized Penalty and Barrier Methods . . . 619
Exercises . . . 623
16.5 Exact Penalty Methods . . . 623
Exercises . . . 626
16.6 Multiplier-Based Methods . . . 626
16.6.1 Dual Interpretation . . . 635
Exercises . . . 638
16.7 Nonlinear Primal-Dual Methods . . . 640
16.7.1 Primal-Dual Interior-Point Methods . . . 641
16.7.2 Convergence of the Primal-Dual Interior-Point Method . 645
Exercises . . . 647
16.8 Semidefinite Programming . . . 649
Exercises . . . 654
16.9 Notes . . . 656

V Appendices 659

A Topics from Linear Algebra 661
A.1 Introduction . . . 661
A.2 Eigenvalues . . . 661
A.3 Vector and Matrix Norms . . . 662
A.4 Systems of Linear Equations . . . 664
A.5 Solving Systems of Linear Equations by Elimination . . . 666
A.6 Gaussian Elimination as a Matrix Factorization . . . 669
A.6.1 Sparse Matrix Storage . . . 675
A.7 Other Matrix Factorizations . . . 676
A.7.1 Positive-Definite Matrices . . . 677
A.7.2 The LDL^T and Cholesky Factorizations . . . 678
A.7.3 An Orthogonal Matrix Factorization . . . 681
A.8 Sensitivity (Conditioning) . . . 683
A.9 The Sherman–Morrison Formula . . . 686
A.10 Notes . . . 688

B Other Fundamentals **691**
B.1 Introduction . . . 691
B.2 Computer Arithmetic . . . 691
B.3 Big-O Notation, $O(\cdot)$ . . . 693
B.4 The Gradient, Hessian, and Jacobian . . . 694
B.5 Gradient and Hessian of a Quadratic Function . . . 696
B.6 Derivatives of a Product . . . 697
B.7 The Chain Rule . . . 698
B.8 Continuous Functions; Closed and Bounded Sets . . . 699
B.9 The Implicit Function Theorem . . . 700

C Software **703**
C.1 Software . . . 703

Bibliography **707**

Index **727**
