Linked Data in the Library & OpenRefine

Sai Deng, University of Central Florida Libraries

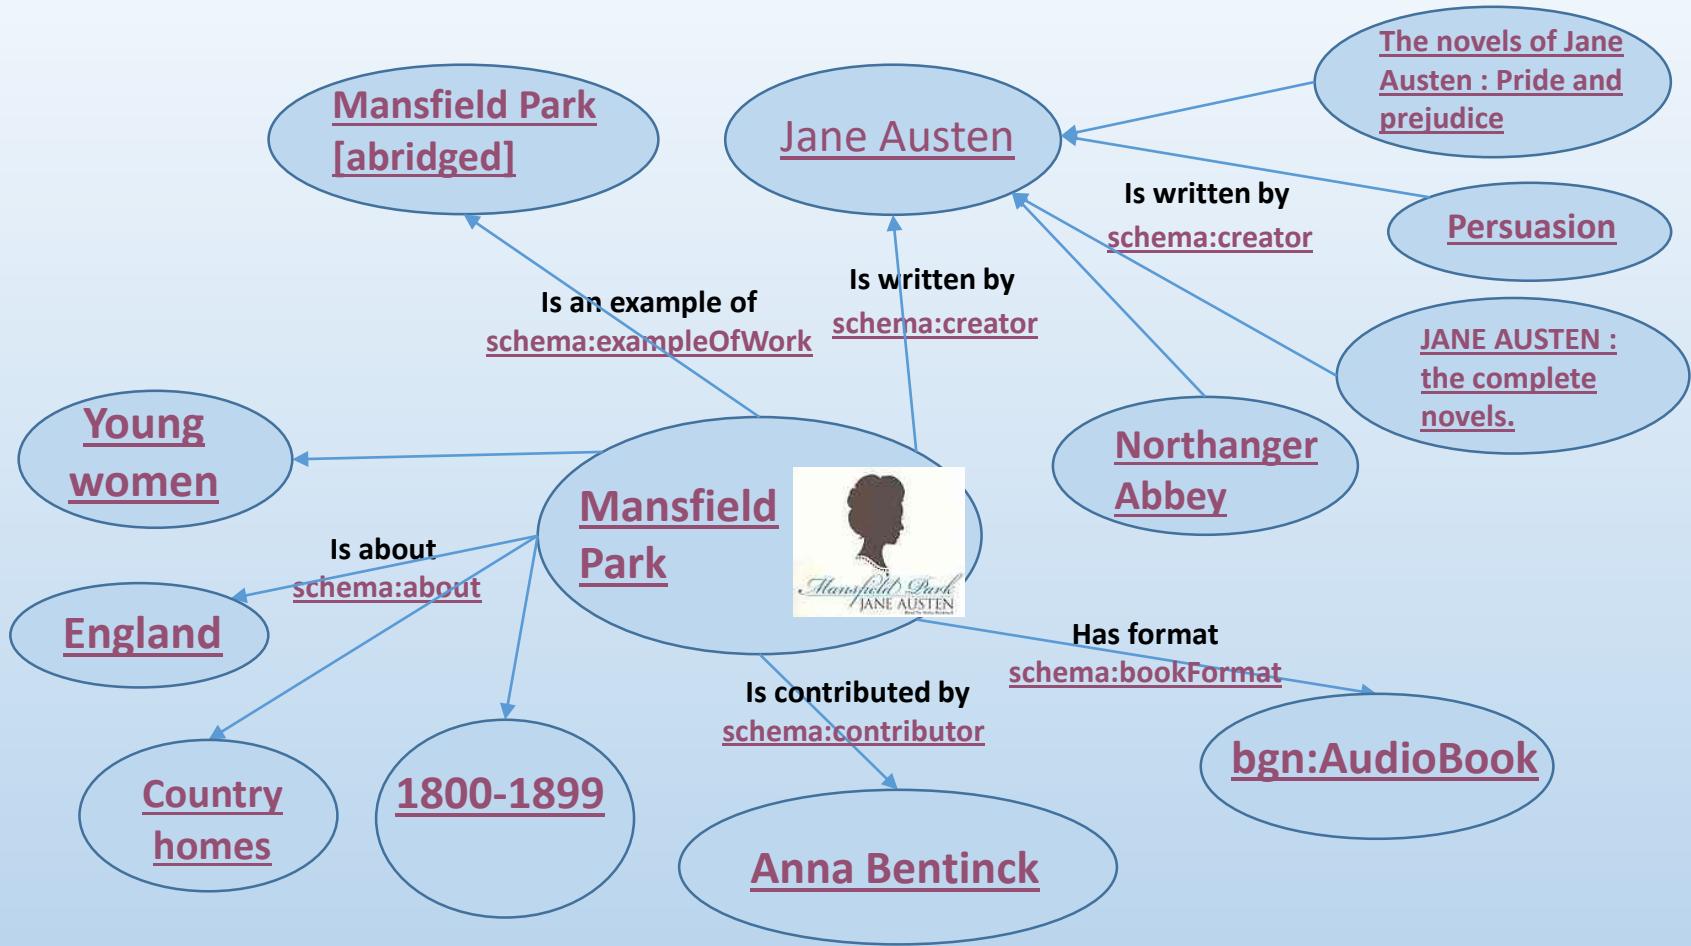

Linked Data

- Questions to think about:
 - Why does linked data matter? How can libraries and librarians embrace linked data?
- Linked Data in the Library and the Web
 - Cases
 - Standards and Vocabularies
- Linked Data Design Principles, Building Blocks & Creation
- Current Digital Repositories and Linked Data
- Data Editing Tool: OpenRefine (Features, Examples)
- Possible Ways to Get Involved

Linked Data

- Why does linked data matter?
 - Change of the web:
 - Before the web (document silos)
 - Web 1.0 (web of documents)
 - Web 2.0 (social web; application silos)
 - Web 3.0 (semantic web)
 - Web 4.0 (intelligence web)
 - Change from web of “documents” to web of “data”/ “Things” (deconstruct webpages; web semantics: person, place, event, creativeWork...);
 - Allow computers to understand and process data on the web.
- What is linked data?
 - It is recommended best practice for exposing, sharing, and connecting data, information, and knowledge (**structured data**) on the web;
 - Key technologies: **URIs, HTTP, RDF**. — Wikipedia
 - Linked data vs. **Semantic Web**: Pieces vs. whole
- Resource Description Framework (RDF): Represent information in triples
 - Subject: a resource, identified with a URI
 - Predicate: specification of the relationship
 - Object: a resource the subject is related to

Linked Data Examples

*Based on information from worldcat.org. LOD links from this site may change.

Linked Data Examples

- In RDF/XML, e.g.,

```
<rdf:Description rdf:about="http://www.worldcat.org/oclc/930255038">
  <schema:name xml:lang="en">Mansfield Park</schema:name> ...
  <schema:about
    rdf:resource="http://experiment.worldcat.org/entity/work/data/1120181956
#Topic/young_women"/>
  <schema:bookFormat rdf:resource="http://bibliograph.net/AudioBook"/>...
</rdf:Description>...
```

- In JSON-LD, e.g.,

```
{ "@id" :
  "http://experiment.worldcat.org/entity/work/data/1120181956#Topic/yo
ung_women", "@type" : "schema:Intangible", "name" : { "@language" :
  "en", "@value" : "Young women" }
},...
```

- In N-triples, e.g.,

```
<http://www.worldcat.org/oclc/930255038>
<http://schema.org/about>
<http://experiment.worldcat.org/entity/work/data/1120181956#Topic/you
ng_women>...
```

Linked Data and the Library Community

- What have libraries been doing with linked data in recent years?
 - Preparing for linked data:
 - Add linked open data (LOD) links to bibliographic records (e.g., \$0 in MARC records);
 - Control terms and add LOD links to metadata in digital repositories.
 - Convert bibliographic and authority records into linked data set:
 - WorldCat Linked Data, e.g., Works;
Explore: <http://experiment.worldcat.org/entity/work/data/1080130963>
 - Linked Data for Production (LD4P): prepared data for SHARE-VDE
 - Collaborate to develop tools, discovery systems and collections;
 - Promote ORCID, ISNI and Identity Management;
 - Use open data and linked open data to support research;
 - Resources
 - Library Linked Data Incubator Group: Datasets, Value Vocabularies, and Metadata Element Sets. <https://www.w3.org/2005/Incubator/ld/XGR-ld-vocabdataset-2011025/>
 - Transforming Library Metadata into Linked Library Data. Introduction and Review of Linked Data for the Library Community, 2003–2011.
<http://www.ala.org/alcts/resources/org/cat/research/linked-data>

Linked Data Vocabularies

Library Standards Created for Linked Data Environment

- **IFLA Library Reference (LRM) Model**
(<https://www.ifla.org/publications/node/11412>)
 - Consolidation of the separately developed IFLA conceptual models: FRBR, FRAD, FRSAD
- **Resource Description and Access (RDA)**
 - “RDA is a package of **data elements, guidelines, and instructions** for creating library and cultural heritage resource metadata that are well-formed according to international models for user-focussed linked data applications.”
 - **RDA Registry** (<http://www.rdaregistry.info/>)
- **Built upon the Standards**
 - Make bibliographic information discoverable on the web
 - Linked Open Data Bibliographic System: **BIBFRAME**
 - Prototype: **SHARE-VDE (Virtual Discovery Environment)**

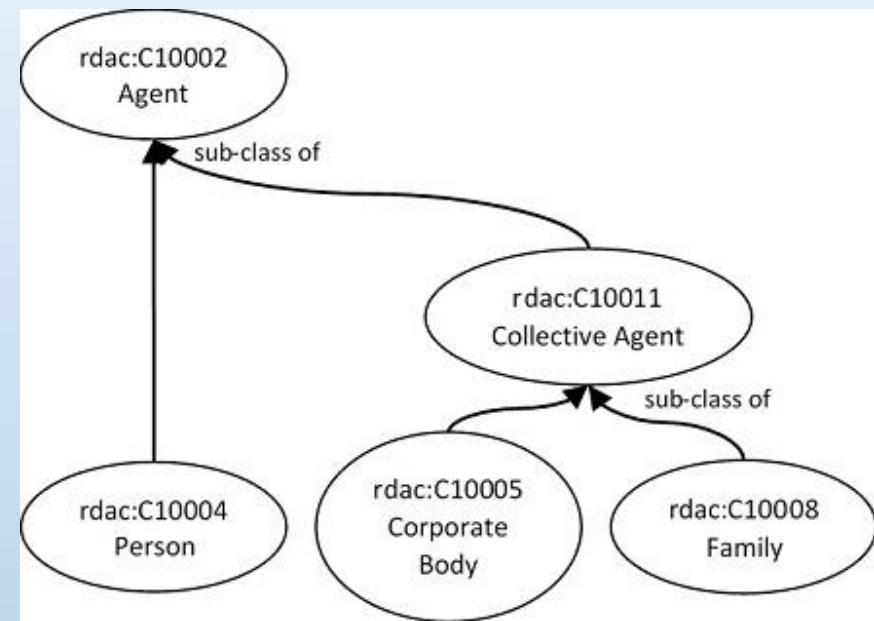

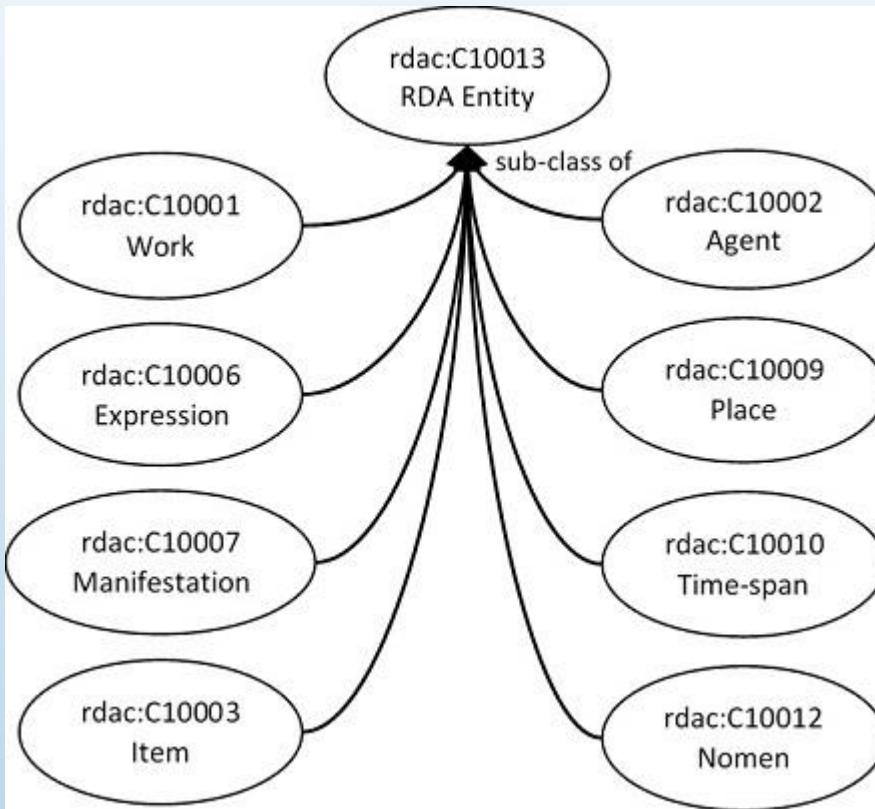

IFLA LRM entities

Linked Data Implementations

An Instance (in Share VDE)

The screenshot shows the Share VDE interface with a blue header bar. The header includes a logo with three circles labeled 'SHARE', 'Discovery', and 'Environment', a search bar, and navigation links for 'Italiano', 'Info | Contacts', and font size adjustment. The main content area displays a book record for 'Pride and prejudice / Jane Austen' by Jane Austen. The record includes a thumbnail image of the book cover, a red sidebar with the author's name, and various metadata fields such as title, publication details, and subject terms. A large yellow box on the right side highlights the 'SHARE Virtual Discovery Environment (VDE)'.

Linked Data Design Principles & Five Star-schema of Linked Open Data

- **The Four Design Principles of Linked Data** (Tim Berners-Lee. 2006)

- Use Uniform Resource Identifiers (**URIs**) as names for things.
 - Use **HTTP URIs** so people can look up those names.
 - When someone looks up a URI, **provide** useful **information** using the standards (**RDF**, **SPARQL**).
 - Include **links to other URIs** so that they can discover more things.
 - Source: <https://www.w3.org/DesignIssues/LinkedData.html>
-
- URIs for naming things, RDF for describing things, SPARQL for querying data; link to other URIs to find more things.

- **Five star-schema of Linked Open Data** (Tim Berners-Lee)

Linked Data Building Blocks

- **The LOD Data Model:** RDF triples
- **Content Rules:** relies on external vocabularies and ontologies
- **Metadata schema**
 - RDF Schema
 - Vocabulary Building Blocks: SKOS, OWL
 - Open Archives Initiative Object Reuse and Exchange (OAI-ORE)
- **Serializations of LOD**
 - RDF Notation-3/N3, Turtle, N-Triples, JSON-LD, RDFa
- **Exchanging LOD**
 - SPARQL
- Mitchell, Erik T. Building Blocks of Linked Open Data in Libraries.
Library Technology Reports (vol. 49, no. 5)

Linked Data Building Blocks

- Take DBpedia as an example:
 - The LOD Data Model: RDF triples
 - Content Rules
 - DBpediaOntology Classes (<http://mappings.DBpedia.org/server/ontology/classes/>)
 - Metadata schema
 - RDF Schema, XML Schema
 - Vocabulary Building Blocks: FOAF, DC, OWL, SKOS
 - Serializations of LOD
 - Turtle, N-Triples, Trix, RDF/JSON
 - Exchanging LOD
 - SPARQL
- A Dbpedia page: (rdf)About: (Person) [Jane Austen](http://DBpedia.org/page/Jane_Austen) (http://DBpedia.org/page/Jane_Austen)
 - [dbo:abstract](#), [dbo:birthDate](#) ([dbr:Hampshire](#)), [dbo:deathDate](#)...
 - [dct:subject](#) (e.g., [dbc:English_women_novelists](#))
 - [rdf:type](#) (e.g., [owl:Thing](#), [foaf:Person](#), [dbo:Agent](#), [dbo:Writer](#))
 - [rdfs:comment](#)
 - [owl:sameAs](#) [wikidata:Jane Austen](#)
<http://viaf.org/viaf/102333412>
 - [foaf:gender](#) (female (en))
 - is [dbo:author](#) of (e.g., [dbr:Emma_\(novel\)](#))
 - is [dbo:influenced](#) of (e.g, [dbr:George_Crabbe](#))

Vocabularies

Current Digital Repositories and Linked Data

- **Samvera** (previously “Hydra”)
 - LDP platform, publication of RDF data;
 - Extensions: GeoMash, ORCiD integration
 - Case: [Oregon Digital](#)
 - Migrated from CONTENTdm to Hydra;
 - Created [opaquenamespace](#) (to accommodate terms without existing LOD links)
- **Islandora**
 - Effort in mapping MODS to RDF;
 - Fedora 4, LDP implementation; Islandora CLAW
 - Experiments and Cases:
 - [Islandora CLAW](#)
 - [TU Delft repository example: Colonial Architecture](#) (Delftdora module, Fedora 3)
 - [A Lightweight Structured Data Implementation Using JSON-LD and Schema.org for Digital Repository](#) (Mak et al.)

Current Digital Repositories and Linked Data

- DSpace
 - **DSpace Linked Data support** spans all three Layers: “the storage layer with a **triple store**, the business logic with classes to **convert** stored contents into RDF, and the application layer with a module to **publish** RDF serializations.”
 - Donohue. Linked (Open) Data.
(<https://wiki.duraspace.org/display/DSDOC6x/Linked+%28Open%29+Data>)
- Becker, Pascal-Nicolas. [Illuminating DSpace's Linked Data Support](#)

Current Digital Repositories and Linked Data

- Omeka
 - Open source web publishing platform. Supports Dublin Core. Can export METS, dc-rdf, JSON etc.
 - [Ozmeka \(plug-ins\)/ Omeka linked data](#)
- [Item Relations \(Plug-in\)](#)
 - It defines item-item relationship using several vocabularies (e.g., [Dublin Core](#), [FRBR](#), [FOAF](#), and [BIBO](#)). For example,
Title: Linked data in the library
Is Part Of: CALA Southeast Chapter 2017 Spring Program "Sharing Your Professional Expertise and Your Library's Collections"
Item Relations

This Item **frbr:partOf** Item: [CALA Southeast Chapter 2017 Spring Program](#)

This Item **dcterms:isPartOf** Item: [CALA Southeast Chapter 2017 Spring Program](#)

Current Digital Repositories and Linked Data

- **Digital Commons**
 - Allows adding extra fields for links (not RDF)
- **Preparing for Linked Data**
 - Include links (e.g., id.loc.gov, viaf.org) in added additional fields for author, advisor, department names etc.;
 - Data (in spreadsheet) cleanup and reconciliation using OpenRefine

Data Editing Tool: OpenRefine

- **OpenRefine**
 - **Download and installation**
<http://openrefine.org/download.html>
 - **Documentation**
<https://github.com/OpenRefine/OpenRefine/wiki/Documentation-For-Users>
 - **Features**
 - Import
 - Facet
 - Edit cells: Clustering...
 - Edit columns: Add Column based on this column; Fetching URLs from Web Services (*Enrich existing data columns)...
 - Expressions
 - Export
 - History...
- **Adding LOD Links to Fields in Digital Repositories**
 - Authors/Creators
 - Contributors, e.g., thesis advisors
 - Corporate names, e.g., university, college and departmental names
 - Subjects
 - Person identifiers

Adding Linked Data Vocabularies to UCF Digital Repositories: Cases

- **Cases**
 - **Adding LC and VIAF Links to Advisor Names**
 - Faceting, clustering, LoC reconciliation, review; add column based on this column, VIAF reconciliation, review
 - **Combining Multiple Links for Author Names**
 - Expression: General Refine Expression Language (GREL)
 - **Adding LC Subject Links to IR Records**
 - Splitting, add column based on this column, expression
 - **Adding FAST Headings by Fetching URLs**
 - Add column by fetching URLs, expression, text transformation
 - **For step by step instructions, please refer to**

*Add both links or only one type of link for advisors (e.g., VIAF, or LC)

Combining Multiple Links for Author Names

- Using Expression to Format Multiple Links

- Expression Language: General Refine Expression Language (GREL)
- First, run reconciliations and get VIAF and LC links;
- Then add columns, e.g.,
 - Edit column – Add column based on this column
 - New Column name author1_viafurl
 - Expression "http://viaf.org/viaf/" + cell.recon.match.id
- Edit column – Add column based on this column
- New column name author1_lcurl
- Expression cell.recon.match.id

The screenshot shows the Refine interface with the following details:

- URL:** 127.0.0.1:3333/project?project=1576824606302
- Project Name:** UCFForum_batch2.xlsx
- Facet / Filter:** author1_copy:judgment
- Table Headers:** 102 rows, Show as: rows records, Show: 5 10 25 50 rows.
- Faceted Search:** All, title, author1, author1_copy, author1_lcurl (circled), author1_viafurl (circled), contribu
- Row Data:** Row 41, Where Are Your Papers? (McCloud, Rebekah) -> McCloud, Rebekah (Choose new match) -> http://id.loc.gov/authorities/names/n2008001755 -> http://viaf.org/viaf/70855412

Combining Multiple Links for Author Names

- Using Expression to Format Multiple Links

- Add column based on this column

- New column name author1_viafurl_lcurl
 - Expression

```
cells["author1_viafurl"].value + " " + cells["author1"].value +  
"[VIAF] " + cells["author1_lcurl"].value + " " +  
cells["author1_copy"].value + "[LC]"
```

rows	author1_lcurl	author1_viafurl	author1_viafurl_lcurl
	http://id.loc.gov/authorities/names/n2008001755	http://viaf.org/viaf/70855412	http://viaf.org/viaf/70855412 McCloud, Rebekah [VIAF] http://id.loc.gov/authorities/names/n2008001755 McCloud, Rebekah [LC]

Adding LC Subject Links to IR Records

dsx Permalink Open... Export... Help

102 rows Show as: rows records Show: 5 10 25 50 rows

document_type	publication_date	season	keywords 1	keywords 2	keywords 3	keywords 4

Main Steps:

- Splitting keywords into columns;
- **Edit column** – Add column based on this column:
New column name
keyword1_url
Expression
cell.recon.match.id + " | " +
cell.recon.match.name
...
- **Put all subjects & links together in a column:**
New column name
subjects_linked
Expression
if(isBlank(cells["keyword1_url"].value),
" ", cells["keyword1_url"].value) + " "+
...
if(isBlank(cells["keyword6_url"].value),
" ", cells["keyword6_url"].value)...

Adding LOD Links to IR Records

Violence is Not a Virus, but it is Transmitted

[Roberto Hugh Potter](#), [University of Central Florida](#)

 Download

Description

The University of Central Florida (UCF) Forum is a weekly series of opinion columns presented by the UCF News & Information. The columns are the opinions of the writers, who serve on the UCF Forum panel of faculty members, staffers and students for a year. A new column is posted each Wednesday at UCF Today and then broadcast between 7:50 and 8 a.m. Sunday on WUCF-FM (89.9).

Publication Date

9-5-2012

Keywords

Violence; Mass shooting; Firearms; Gun violence; Assailant; Firearm; Criminal behavior; Criminal violence; Campus violence

Introduction

Recent mass shootings have again brought out the "violence is a disease" crowd. The thinking is that if we reduce the availability of firearms, we will decrease violence.

Edit column—add column by fetching URLs (under "Topical_Subject"):

New column name fast_url

Expression

"http://experimental.worldcat.org/fast/search?query=oclc.heading+exact+%22"+value.replace('/(\s)/','%20')+"%22&httpAccept=application/rdf%2bxml"

Text transformation (extract FAST ID):

Expression

"http://experimental.worldcat.org/fast/"+value.parseHtml().select('dct|identifier')[0].htmlText()

Other Possibilities for Adding LOD Links to Digital Repositories and OpenRefine

- **Augment Data with Reconciliation Services**
 - Reconcile genre values to AAT terms
 - Reconcile places to GeoNames
 - Reconcile ORCID...
- **Add Columns by Fetching URLs**
 - [Geocode your data using a service like Google map](#)
 - [Gathering IR seed data with OpenRefine and SHERPA/RoMEO](#)
- **Reconcile Against Local Vocabularies**
 - **reconciliation-csv**
 - <http://okfnlabs.org/reconcile-csv/>
 - Possibilities: Reconcile various fields in OpenRefine against local controlled term lists, e.g., medals, ranks for Veterans Oral History
- **Next Steps**
 - Keep adding more LOD links to personal names, subjects and college/department names to digital collections;
 - Continue to explore OpenRefine and related services to enrich metadata and improve workflow;
 - Promote, explore and link authors/researchers to personal identifiers.

Reflections

- Possible Ways to Get Involved with Linked Data
 - Be aware of what's going on, such as major LOD projects in the library community and the web;
 - Attend webinars and trainings to learn;
 - Be an advocate of open data;
 - Help faculty members and graduate students to understand linked data (such as linked data in general and in their disciplines), use open data and linked open data to support research;
 - Promote linked data and identity management (e.g., ORCID), make researchers aware of their presence in established linked data set (e.g., VIAF, LC LOD);
 - Collaborate and contribute to linked data projects when possible, e.g.,
 - Add LOD links to enrich record information and improve workflow using tools (e.g., OpenRefine);
 - Enrich project content by auto-annotating using tools (e.g., DBpediaSpotlight);
 - Support in applying and designing LOD thesauri and dataset;
 - Watch for LOD developments in state and national level initiatives;
 - Facilitate research in using linked open data...
