<i>Preface</i>	v
<i>Foreword</i>	vii
Part I. General introduction to liposomes	1
<i>Introduction</i>	3
<i>1. Chemistry of lipids and liposomes</i>	9
Single-chain lipids	13
Double-chain lipids	15
Glycerophospholipids	16
Phosphatidylcholines (PC)	16
Phosphatidylethanolamines (PE)	18
Phosphatidylserines (PS)	18
Phosphatidylinositol (PI)	18
Phosphatidylglycerols (PG)	18
Cardiolipin (CL)	19
Glyceroglycolipids	19
Sphingophospholipids	19
Sphingomyelin	20
Sphingoglycolipids	20
Ceramidylgalactosides (cerebroside)	20
Gangliosides	22
Synthetic double-chain polar lipids	22
Polymerizable polar lipids	24
Other liposome-forming lipids and molecules	29
Fluorocarbons	29
Non-ionic surfactants	31
Liposomes from single-chain surfactants	32
Sterols	32

Chemical stability of lipids	34
Oxidation	35
Hydrolysis	37
Manufacturing of lipids	40
2. Structure of amphiphilic aggregates	43
Structure	43
Dynamics	52
Phase behavior of the membrane	54
Bilayer permeability	56
Vesicle size	62
3. Preparation of liposomes	63
Historical and some general considerations	63
Thin-film hydration methods	67
Mechanical treatments	73
1. Extrusion	74
2. French press	76
3. Microfluidization/homogenization	76
4. Sonication	78
Electrostatic treatments	80
Transient pH jump	81
Chemical treatments	82
1. Cosolubilizer removal methods	82
2. Detergent depletion techniques	83
Injection methods	88
1. Ethanol injection	88
2. Ether injection	90
Demulsification methods	91
1. Reverse-phase evaporation	92
2. Double emulsions	92
Other methods	94
1. Giant vesicles	94
2. Spontaneous vesiculation	94
3. Liposomes from preformed vesicles	97
a. Fusion	97
b. Freeze-thawing	98
c. Dehydration-rehydration	98
d. Cochleate method	98
Liposomes from some other (semi)synthetic lipids	100
1. Polymerized vesicles	100
2. Fluorocarbon lipids	102
3. Bolaamphiphiles liposomes	102
4. Detergent liposomes	103
5. Niosomes	103
6. Interdigitated liposomes	103
7. Other systems	105
Liposome properties	107

4. Mechanism of liposome formation	109
<i>Introduction</i>	109
Forces between lipid molecules and lipid aggregates	110
Intermembrane forces	111
a. Van der Waals forces	111
b. Electrostatic forces	112
c. Hydration forces	114
d. Steric forces	115
Shapes of vesicles	117
Mechanism of liposome formation	119
Hydration of dry lipid films: The mechanism of MLV formation	121
Formation of LUV and SUV	127
1. Mechanism of vesicle formation by detergent depletion	127
2. Generalization of this model to other vesicle preparation methods	135
3. Reverse phase methods	141
On the spontaneity of the liposome formation and their thermodynamic in stability	144
Thermodynamics versus kinetics	147
Liposome destabilization	151
Conclusion	153
5. Liposome characterization methods	155
Microscopies	156
Optical microscopy	156
Electron microscopy	156
Spectroscopies	157
Diffraction and scattering methods	158
Thermodynamic methods	158
Hydrodynamic methods	159
Other analyses	161
<i>References</i>	166
Part II. Application of liposomes in basic sciences	173
<i>Introduction</i>	175
6. Applications of liposomes in theoretical sciences	179
7. Applications in biophysics	185
Vesicle shapes	187
Size distribution of vesicles	195

Aggregation and fusion of liposomes	198
Aggregation of liposomes	201
Liposomes as fractal systems	202
Fusion of liposomes	205
Liposomes in materials science	208
Biocompatible surfaces	208
<i>8. Liposomes in the studies of the evolution of life</i>	211
Extraterrestrial origin of amphiphilic lipids	212
Membranes, cholesterol and cell communication	212
Lipid asymmetry	213
Unusual lipids in primitive life forms	213
Chirality in amphiphilic systems	215
Helicity	216
<i>9. Applications in chemistry</i>	219
Supramolecular chemistry	219
Various liposomes as cell models	221
Membrane mimetic chemistry	225
Photosynthesis	226
Photolysis of water	230
Bioelectronics	232
Biomineralization	233
Magnetoliposomes	234
Microcompartmentalization and the formation of colloidal particles	235
Catalysis	236
Liposomes in separation and purification	239
Liposomes as models of physically induced damage	239
Radiation	239
Freeze–thawing, freeze–drying and drying	240
Osmotic shocks	240
Temperature acclimatization of membranes	241
<i>10. Reconstitution or proteins</i>	243
Mechanism of reconstitution and orientation of proteins	248
Ion transport	249
<i>References</i>	253

Part III. Application of liposomes in pharmacology and medicine	261
<i>Introduction</i>	263
<i>11. Liposomes as a drug delivery system</i>	265
Toxicology and adverse effects of liposomes	263
An introduction to immunology	268
In vivo behavior of liposomes	273
Stability of liposomes in biological fluids	273
Interactions of liposomes with cells	277
Fate of liposomes in vivo	280
Stealth® liposomes	284
The origin of the Stealth effect	287
Description of steric stabilization	289
Classical and Stealth liposome pharmacokinetics	301
Safety of the Stealth liposome administration	305
The mechanisms of liposome action	307
Selection of the liposome type and drug loading	309
Loading of the drug	309
Emulsions, microemulsions, micro- and nanoparticles	317
Drug release from liposomes	318
<i>12. Liposomes in the treatment of infectious diseases</i>	323
Liposomes in the treatment of fungal infections	325
Other drug delivery vehicles	327
Amphotericin B colloidal dispersion (ABCD®)	329
Liposomes in the treatment of protozoal infections	336
Leishmaniasis	337
Malaria	337
Liposomes in antiviral therapy	338
AIDS	341
Liposomes in antibacterial therapy	343
<i>13. Liposomes as immunoadjuvants</i>	347
Liposomes as carriers of vaccines	347
Liposome–antigen association complex	349
Lipids as antigens	354
Liposomes in autoimmune diseases	356
Macrophage activation	358
Activated macrophages in antiparasitic diseases	358
Cyclosporin A	362

14. Liposomes in anticancer therapy	365
Cancer and antineoplastic therapies	365
Liposomes in immunomodulator therapy	368
Chemotherapy of cancer	373
Conventional liposomes in the therapy of cancer	374
Anthracyclines	376
Platinum coordination complexes	383
Antimetabolites and some other antineoplastic drugs	387
Cytarabine	387
Methotrexate	388
Stealth liposomes in anticancer chemotherapy	390
Rationale and concepts	391
Anticancer therapies with stealth SUV's	394
Stealth liposomes as microreservoirs	395
Cancer phototherapy and radiotherapy using liposomes	396
Phototherapy	396
Radiotherapy	397
15. Liposomes and inflammations	399
Arthritis	400
16. Other medical applications of liposomes	405
Metal detoxification	405
Liposomes in enzyme therapy	407
Liposomes in cardiovascular diseases	408
Lecithin and atherosclerosis	409
Liposomes as synthetic erythrocytes	413
Liposomes in the diseases of liver and spleen	416
Liposome in the therapy of neonatal jaundice	419
25. Other administration routes of liposomes	425
Oral administration of liposomes	425
Topical applications of liposomes	428
Liposomes for drug delivery to the lung	434
Liposome pharmacokinetics in the lung	435
Lung targeting	438
18. Site specific drug delivery	441
Liposome targeting	441
Ligand-bearing liposomes	444
Glycolipid and glycoprotein ligand-bearing liposomes	445

Viroosomes	446
Immunoliposomes	446
Preparation of immunoliposomes	447
Liposomes as long circulating or localized microreservoir	453
Liposomes as a model in medicine	455
<i>References</i>	459
Part IV. Other applications of liposomes	473
<i>Introduction</i>	475
<i>19. Cosmetic applications of liposomes</i>	477
Chemical composition of liposomes	480
Liposomes from soya phospholipids	480
Sphingosomes	480
Niosomes	481
Transfersomes	482
Penetration into the skin	483
Commercial products	485
Some of the current liposomal products	486
<i>20. Liposomes as a carrier system in genetic engineering</i>	489
<i>21. Liposomes in diagnostics</i>	495
Contrast-carrying liposomes in diagnostic imaging	495
Liposomes in radiology	495
Liposomes in scintigraphy	496
Liposomes in magnetic resonance imaging	498
Liposomes in immunoassays	501
<i>22. Liposomes in food industry</i>	507
Encapsulation and stimulated release of enzymes	508
Liposomes in agriculture	510
Liposomes and biocides	510
Liposomes in veterinary medicine	511
Liposomes as a model system	511
Liposomes in transfection	512

<i>23. Liposomes in ecology and other applications</i>	513
Liposomes against oil spills	513
Other applications of liposomes	514
Heavy metal decontamination	515
<i>24. Industrial manufacturing of liposomes</i>	517
Scale-up	519
Sterility	526
Stability	527
Lyophilization	529
Some of the industrial products of pharmaceutical liposomes	532
Parenteral administration of liposomes to humans	535
Doxil	539
