# Contents

<i>Preface</i>	page ix
<i>Notation and conventions</i>	xiv
<b>1 The local cohomology functors</b>	1
1.1 Torsion functors	1
1.2 Local cohomology modules	3
1.3 Connected sequences of functors	10
<b>2 Torsion modules and ideal transforms</b>	17
2.1 Torsion modules	18
2.2 Ideal transforms	22
2.3 Geometrical significance	38
<b>3 The Mayer-Vietoris Sequence</b>	47
3.1 Comparison of systems of ideals	48
3.2 Construction of the sequence	51
3.3 Arithmetic rank	55
3.4 Direct limits	59
<b>4 Change of rings</b>	66
4.1 Some acyclic modules	67
4.2 The Independence Theorem	71
4.3 The Flat Base Change Theorem	75
<b>5 Other approaches</b>	82
5.1 Use of Čech complexes	83
5.2 Use of Koszul complexes	94
<b>6 Fundamental vanishing theorems</b>	102
6.1 Grothendieck's Vanishing Theorem	103
6.2 Connections with grade	107
6.3 Exactness of ideal transforms	112

6.4	An Affineness Criterion due to Serre	117
<b>7</b>	<b>Artinian local cohomology modules</b>	<b>123</b>
7.1	Artinian modules	123
7.2	Secondary representation	127
7.3	The Non-vanishing Theorem again	131
<b>8</b>	<b>The Lichtenbaum-Hartshorne Theorem</b>	<b>136</b>
8.1	Preparatory lemmas	137
8.2	The main theorem	144
<b>9</b>	<b>The Annihilator and Finiteness Theorems</b>	<b>152</b>
9.1	Finiteness dimensions	152
9.2	Adjusted depths	155
9.3	The first inequality	159
9.4	The second inequality	163
9.5	The main theorems	170
9.6	Extensions	175
<b>10</b>	<b>Matlis duality</b>	<b>179</b>
10.1	Indecomposable injective modules	179
10.2	Matlis duality	185
<b>11</b>	<b>Local duality</b>	<b>197</b>
11.1	Minimal injective resolutions	198
11.2	Local Duality Theorems	201
11.3	Some applications	207
<b>12</b>	<b>Foundations in the graded case</b>	<b>216</b>
12.1	*Injective modules	217
12.2	The *restriction property	221
12.3	The reconciliation	225
12.4	Some examples and applications	229
<b>13</b>	<b>Graded versions of basic theorems</b>	<b>237</b>
13.1	Fundamental theorems	237
13.2	*Indecomposable *injective modules	246
13.3	*Canonical modules	253
13.4	Graded local duality	258
<b>14</b>	<b>Links with projective varieties</b>	<b>265</b>
14.1	Affine algebraic cones	265
14.2	Projective varieties	269

<b>15</b>	<b>Castelnuovo regularity</b>	277
15.1	Finitely generated components	277
15.2	The basics of Castelnuovo regularity	281
15.3	Degrees of generators	289
<b>16</b>	<b>Bounds of diagonal type</b>	294
16.1	Some basic lemmas	295
16.2	The right bounding functions	299
16.3	Polynomial representations	305
16.4	Bounding systems for numerical invariants	309
<b>17</b>	<b>Hilbert polynomials</b>	312
17.1	The characteristic function	313
17.2	Bounds in terms of Hilbert coefficients	319
<b>18</b>	<b>Applications to reductions of ideals</b>	325
18.1	Reductions and integral closures	325
18.2	The analytic spread	330
18.3	Links with Castelnuovo regularity	333
<b>19</b>	<b>Connectivity in algebraic varieties</b>	342
19.1	The connectedness dimension	342
19.2	Complete local rings and connectivity	347
19.3	Some local dimensions	352
19.4	Connectivity of affine algebraic cones	359
19.5	Connectivity of projective varieties	360
19.6	Connectivity of intersections	363
19.7	The projective spectrum and connectedness	368
<b>20</b>	<b>Links with sheaf cohomology</b>	374
20.1	The Deligne Isomorphism	375
20.2	The graded Deligne Isomorphism	386
20.3	Links with sheaf theory	389
20.4	Applications to projective schemes	398
	<i>Bibliography</i>	407
	<i>Index</i>	410
