Magnetically recoverable catalysts for the preparation of pyridine derivatives: an overview

Ghodsi Mohammadi Ziarani, 💿 *a Zohreh Kheilkordi, 💿 a Fatemeh Mohajer, 回 a Alireza Badiei ^b and Rafael Lugue ^{*cd}

Magnetically recoverable nano-catalysts can be readily separated from the reaction medium using an external magnet. In recent years, chemistry researchers have employed them as catalysts in chemical reactions. The high surface area, simple preparation, and modification are among their major advantages. Pyridine derivatives are an important category of heterocyclic compounds, which show a wide range of excellent biological activities, including IKK- β inhibitors, anti-microbial agents, A2A adenosine receptor antagonists, inhibitors of HIV-1 integrase, anti-tumor, anti-inflammatory, and anti-Parkinsonism. Recently, the catalytic activity of magnetic nanoparticles was investigated in multicomponent reactions in the synthesis of pyridine derivatives, which is discussed in this review.

Introduction 1.

tion in various fields.^{1,2} One of the most influential families of nanomaterials is magnetic nanoparticles, which have been ^aDepartment of Chemistry, Faculty of Physics and Chemistry, Alzahra University, extensively employed in different sciences, including drug Tehran, 1993893979, Iran. E-mail: gmohammadi@alzahra.ac.ir; Fax: +98 delivery,3 illness recognition,4 water desalination,5 ambiance scrubbing,6 and chemical catalysis.7 Recently, magnetic nano-^cDepartamento de Quimica Organica, Universidad de Cordoba, Campus de Rabanales, catalysts have attracted the consideration of many researchers due to their high activity, selectivity, availability, large surface ^dPeoples Friendship University of Russia (RUDN University), 6 Miklukho Maklaya str, area, low toxicity, excellent reusability, and easy separation.8,9

In recent decades, nanotechnology has attracted much atten-

Ghodsi Mohammadi Ziarani was born in Iran in 1964. She received her BSc degree in Chemistry from the Teacher Training University, Tehran, Iran, in 1987, her M.Sc. degree in Organic Chemistry from the Teacher Training University, Tehran, Iran, under the supervision of Professor Jafar Asgarin and Professor Mohammad Ali Bigdeli in 1991 and her PhD degree in asymmetric synthesis

(Biotransformation) from Laval University, Quebec, Canada under the supervision of Professor Chenevert, in 2000. She is a Full Professor of Organic Chemistry in the chemistry department of Alzahra University. Her research interests include organic synthesis, heterocyclic synthesis, asymmetric synthesis, natural product synthesis, synthetic methodology, and applications of nano-heterogeneous catalysts in multicomponent reactions.

Zohreh Kheilkordi was born in Ramsar/Mazandaran, Iran, in 1990. She received her BSc in Chemistry from Mazandaran University, Babolsar in 2012, and her M.Sc. in Organic Chemistry from Yazd University, under the supervision of Dr Mohammad Ali Amrollahi, in 2014. She received her PhD degree in organic chemistry from Alzahra University, Tehran, Iran, under the supervision of

Prof. Ghodsi Mohammadi Ziarani, in 2019. She is currently a postdoctoral researcher in Organic Chemistry at Alzahra University under the supervision of Prof. Ghodsi Mohammadi Ziarani.

Magnetic nanoparticles (MNPs) have high surface-to-volume ratios, and can be functionalized with inorganic and organic compounds.¹⁰⁻¹⁵ The magnetic nano-catalysts can be separated by external magnetic fields.¹⁶ Fe₃O₄ nanoparticles can be coated with organic and inorganic materials, including silica,¹⁷ surfactants,¹⁸ polymers,^{17,19} cellulose,²⁰ carbon,²¹ chitosan,²² as well as prepared with a core–shell structure. The coating layer on magnetic nanoparticles can be prevented from aggregation or oxidation and their stability can be increased.

Heterocyclic compounds have high biological and pharmaceutical activities. Among them, pyridine derivatives are important heterocyclic compounds, which attracted the attention of scientists. Pharmaceutical molecules and natural products can be based on heterocyclic compounds such as pyridine derivatives,²³ which have biological activities, such as inhibitors of HIV-1 integrase, A2A adenosine receptor antagonists, IKK- β inhibitors, anti-microbial, anti-tumor, analgesic, antiinflammatory, and antipyretic agents.²⁴ In continuation our research work,^{25–29} this contribution will be aimed to discuss the synthesis of magnetic nano-catalysts as well as their applications in the synthesis of pyridine derivatives.

Fatemeh Mohajer was born in Tehran, Iran, and she received her BSc in Applied Chemistry from Bu-Ali Sina University and M.Sc degree in Organic Chemistry from Azad University in Karaj. She is a PhD student under the supervision of Prof. Ghodsi Mohammadi Ziarani at Alzahra University in Tehran, Iran.

2. The synthesis of pyridine derivatives by diverse magnetic catalysts

2.1. Basic magnetic catalyst

The core–shell structure of Fe₃O₄@KCC-1-*n*pr-NH₂ **6** as an effective basic magnetic catalyst was prepared and employed in the synthesis of tetrahydro di-pyrazolopyridines by Azizi, and his co-workers. Core–shell Fe₃O₄@KCC-1 **4** was prepared by adding cetyl trimethyl ammonium bromide (CTAB) **2** and tetraethylorthosilicate (TEOS) **3**. Then, Fe₃O₄@KCC-1 **4** was functionalized with 3-aminopropyl)trie-thoxysilane **5** to produce Fe₃O₄@KCC-1-*n*pr-NH₂ **6** with excellent basic properties. Details for the preparation of Fe₃O₄@KCC-1-*n*pr-NH₂ **6** are shown in Scheme **1**. Various characterization techniques, including FT-IR, SEM, TEM, BET, and XRD, confirmed the structure of Fe₃O₄@KCC-1-*n*pr-NH₂ **6** as magnetic nano-catalyst.³⁰

 Fe_3O_4 @KCC-1-*n*Pr-NH₂ **6** was employed in the tetra-component reaction of ethyl acetoacetate **7**, hydrazine hydrate **8**, ammonium acetate **10**, and various aromatic aldehydes **9** in ethanol under reflux condition for the synthesis of tetrahydrodipyrazolo pyridine **11** in excellent yields, short reaction times. According to obtained results, different substituents including electron-donating or electronwithdrawing groups on the aromatic ring, did not affect the product yields. All products were obtained in high purity and excellent yields. Also, the anticancer activity of tetrahydrodipyrazolo pyridine derivatives **11** was studied that some of these compounds showed good cytotoxic activity toward types of cancer cell (Scheme 2).³⁰

Fe₃O₄ MNPs **1** were also synthesized according to the literature,³¹ and then coated by TEOS to yield Fe₃O₄@SiO₂ MNPs **4**,³² which were modified by 3-aminoropropyl-trimethoxysilane (APTS) **5** to provide Fe₃O₄@SiO₂-pr-NH₂ MNPs **6**, followed by mixing with a solution of *N*,*N*-dimethylaniline **12**, and formaldehyde **13** in DMF, and then refluxed for 24 h to provide poly *N*,*N*-dimethylaniline-formaldehyde supported on silica-coated Fe₃O₄ MNPs (PDMAF-MNPs) **14** (Scheme 3).³³

PDMAF-MNPs was investigated in the multicomponent reaction of aldehydes 9, malononitrile 16, ammonium acetate

Alireza Badiei was born in Iran in 1965. He received his BSc and MSc degrees in Chemistry and Inorganic Chemistry from the Teacher Training University (Kharazmi), Tehran, Iran, in 1988 and 1991, respectively, and his PhD degree in the synthesis and modification of nanoporous materials from Laval University, Quebec, Canada, in 2000. He is currently a full Professor in the Chemistry

faculty of Tehran University. His research interests include nanoporous materials synthesis, modification of nanoporous materials, and application of organic-inorganic hybrid materials in various fields such as catalysis, adsorption, separation, and sensors.

Rafael Luque, Full Professor from Departamento de Quimica Organica at UCO, Spain as well as Director of the Scientific Center for Molecular Design and **Synthesis** of Innovative compounds for Medicine at RUDN University, Russia, Distinguished Chair Professor at Xi'an Jiaotong University and DSFP Fellow at King Saud University, Saudi Arabia is an internationally recognized

leader and mentor in the areas of (nano)materials science and Green Chemistry/Sustainability (h-index = 83, >34 000 citations to own work, 2018, 2019 and 2020 Highly Cited Researcher-Clarivate Analytics). **RSC** Advances

Scheme 4 Synthesis of 2-amino-3-cyanopyridines 17.

Scheme 5 Synthesis of magnetic nanoparticles with morpholine tags 21.

10, and various ketones **15** under reflux condition in EtOH to obtain 2-amino-3-cyanopyridines **17** in high yields. It was demonstrated that the electron-donating groups results in low reaction yields and long reaction time (Scheme 4).³³

In another example, iron oxide **1** was prepared and reacted with tetraethylorthosilicate (TEOS) **3** to provide Fe_3O_4 @SiO₂ **4**,³⁴ which was treated with 3-chloropropyltriethoxysilane **18** to give Fe_3O_4 @SiO₂@Pr-Cl **19**, followed by the reaction with the ligand bearing morpholine tags **20** to obtain the nano-magnetic catalyst **21** (Scheme 5).³⁵

The nano-magnetic catalyst **21** was examined in the multicomponent reaction of benzaldehydes **9**, acetophenone derivatives **22**, malononitrile **16**, and ammonium acetate **10** under the solvent-free condition in 80 $^{\circ}$ C for the preparation of 2-amino-4,6-diphenylnicotinonitriles 23 (Scheme 6).³⁵

Nano-magnetic Fe₃O₄-Si-(CH₂)₃-N=CH-Ph-OMe MNPs **29** was prepared by the reaction of Fe·Cl₃·6H₂O **24**, FeCl₂·4H₂O **25**, and NH₄OH **26** in H₂O under N₂ atmosphere to prepare Fe₃O₄ MNPs **1**, which was functionalized with aminopropyl silane **5** to provide Fe₃O₄-Si-[CH₂]₃-NH₂ **27**, followed by modification with 4-methoxy benzaldehyde **28** under reflux conditions in ethanol for 24 h (Scheme 7).³⁶

 Fe_3O_4 -Si-(CH₂)₃-N=CH-Ph-OMe MNPs **29** was used in the synthesis of 2-amino-3-cyanopyridines **23** *via* the multicomponent reaction of various aromatic aldehydes **9**, 2-

Scheme 8 Synthesis of 2-amino-3-cyanopyridines 23.

acetylnaphthalene **31**, or deoxybenzoin **31**, malononitrile **16**, and ammonium acetate **10** under solvent-free conditions at 120 °C for 40–70 min in good to high yield in short times (Scheme 8).³⁶

2.2. Acidic magnetic catalysts

 Fe_3O_4 (macrocyclic Schiff base ligand) **34** was synthesized as an efficient and recoverable catalyst for the synthesis of thiopyridine. Macrocyclic Schiff base ligand **32** was obtained *via*

Scheme 9 Synthesis of Fe₃O₄@Co^{II} (macrocyclic Schiff base ligand) 34.

Scheme 11 Synthesis of pyrazolo[3,4-b] pyridines 40.

reaction of 2,2'-(1,4-diazepane-1,4-diyl)-di-aniline **30** and 2,3dihydroxybenzaldehyde **31** in ethanol under reflux for 24 hours. Then, a mixture of FeCl₃·6H₂O **24**, FeCl₂·4H₂O **25**, and NH₄OH **26** was stirred in H₂O under N₂ gas at 100 °C to give Fe₃O₄ **1**, which was treated with macrocyclic Schiff base ligand (m) **32** to give Fe₃O₄-supported macrocyclic Schiff base ligand (m) **33**, followed by the reaction with Co(Cl)₂·6H₂O EtOH under reflux for 24 hours to obtain Fe₃O₄@macrocyclic Schiff base ligand **34** (Scheme 9).³⁷

 Fe_3O_4 @macrocyclic Schiff base ligand 34 was employed in the synthesis of 2-amino-4-aryl-6-(phenylsulfanyl)pyridine-3,5dicarbonitrile derivatives 35 *via* three-component reaction of aldehyde derivatives 9, malononitrile 16, thiophenol 36 under solvent-free conditions (Scheme 10). The catalytic activity of Fe_3O_4 @Co^{II} (macrocyclic Schiff base ligand) 34 was separately compared to that of Fe_3O_4 , macrocyclic Schiff base ligand, Fe_3O_4 @macrocyclic Schiff base ligand 33. It was demonstrated that Fe_3O_4 @Co^{II} 34 showed the best results.³⁷ 4-Aroyl-3-methyl-1,6-diaryl-1*H*-pyrazolo[3,4-*b*] pyridine-5carbonitrile derivatives **40** were synthesized *via* one-pot, the four-component reaction of 1-aryl-3-methyl-1*H*-pyrazol-5-(4*H*) one **39**, 3-aryl-3-oxopropanenitriles **37**, arylglyoxals **38**, and ammonium acetate **10** in the presence of metal oxide silica based-metal bifunctional LDH (layered double hydroxide) as a magnetic nano-catalyst in EtOH/H₂O (1 : 1) under the reflux conditions (Scheme 11). In addition, pyrazolo[3,4-*b*] pyridines **40** have biological and pharmacological activity.³⁸

 $CoFe_2O_4$ @SiO₂-SO₃H 44 was synthesized as a reusable nanocatalyst by Hosseinzadeh *et al.* Initially, $CoFe_2O_4$ magnetic nanoparticles 42 were prepared according to previous works.³⁹ Then, it was modified with tetraethylorthosilicate to provide $CoFe_2O_4$ @SiO₂ 43,⁴⁰ which was dispersed in dry CH₂Cl₂, and ClSO₃H to give CoFe₂O₄@SiO₂-SO₃H 44 (Scheme 12).⁴¹

 $CoFe_2O_4$ (a)Silica MNPs 44 was used in the multicomponent reaction of aldehydes 9, acetophenone 22, malononitrile 16, and ammonium acetate 10 in solvent-free conditions under MW

R= H, 4-Cl, 3-Cl, 2-Cl, 4-F, 2-F, 4-NO₂, 3-NO₂, 4-Br, 4-CN, 2,4-(Cl)₂, 2,6-(Cl)₂

Scheme 14 Synthesis of 2,4,6-triarylpyridine derivatives 46.

irradiation to provide 2-amino-4,6-diarylnicotinonitrile derivatives 23 in good yields (Scheme 13). 41

Forouzandehdel and co-workers synthesized a novel, recyclable nano-catalyst $Fe_3O_4@GO_{TfOH}/Ag/St-PEG-AcA$ **45**, which was employed in the synthesis of 2,4,6-tri-arylpyridine derivatives **46** by the reaction of aldehyde derivatives **9**, acetophenone **22**, and ammonium acetate **10** in H₂O at room temperature (Scheme 14).⁴²

Fe₃O₄@SiO₂@Pr-SO₃H **48** was employed as heterogeneous acidic catalyst in the multicomponent reaction of 1,3-indandione **47**, aromatic aldehydes **9**, acetophenone or propiophenone **22**, and ammonium acetate **10** under solvent-free conditions at 80 °C to obtain indeno[1,2-*b*]pyridines **49** (Scheme 15).⁴³

Hosseinzadeh and *et al.* synthesized 2,6-diaryl-substituted pyridine derivatives **23** *via tetra* component reaction of aldehyde derivatives **9**, acetophenone **22**, malononitrile **16**, and ammonium acetate **10** in the presence of $CoFe_2O_4@SiO_2-SO_3H$ **50** under microwave irradiation and solvent-free conditions (Scheme 16).⁴⁴

Halloysite nanotubes $CuFe_2O_4$ @HNTs 53 was synthesized by the reaction of Halloysite nanotubes HNTs 51 was added to $Fe(NO_3)_3 \cdot 9H_2O$ and 0.14 g (0.58 mmol) of $Cu(NO_3)_2 \cdot 3H_2O$ in distilled water and stirred at room temperature for 1 h, and then the solution of NaOH was added dropwise to it for 10 min at 25 °C, followed by stirring for 2 h at 90 °C to give $CuFe_2O_4$ @HNTs 52, which was separated by an external

magnet, and washed four times with distilled water, dried for 4 h, and calcinated at 500 °C for 5 h to yield extra pure $CuFe_2O_4$ @HNTs 53 (Scheme 17).⁴⁵

The catalytic activity of $CuFe_2O_4$ @HNTs 53 was tested in the synthesis of pyrazolopyridine derivatives 55 *via* the multicomponent reaction of ethyl acetoacetate 7, hydrazine hydrate 54, benzaldehyde 9, and ammonium acetate 10 in EtOH at room temperature for 20 min (Scheme 18).⁴⁵

Maleki and co-workers also synthesized Fe_2O_3 (a) Fe_3-O_4 (a) Co_3O_4 **56** as catalyst to provide polysubstituted pyridines **57** through the pseudo-four-component reaction of aldehyde derivatives **9**, malononitrile **16**, and ammonium acetate **10** under solvent-free conditions at 110 °C (Scheme 19).⁴⁶

In 2019, Mohammadi and co-workers also prepared 2-amino-3cyanopyridine 23 *via* multicomponent reaction of aromatic aldehydes 9, acetophenone derivatives 22, malononitrile 16, and ammonium acetate **10**, in the presence of $SrFe_{12}O_{19}$ as magnetic catalyst under solvent-free conditions at 100 °C. The spectrophotometric properties of 2-amino-4,6-diphenylnicotinonitrile **23** as organo-ligand and several metal ions such as Ag^+ , Cd^{2+} , Co^{2+} , Cr^{3+} , Cu^{2+} , Fe^{3+} , Hg^{2+} , Mn^{2+} , Ni^{2+} , Pb^{2+} , and Zn^{2+} in CH_3CN solution at 25 °C was also investigated. According to the results, 2-amino-4,6-diphenylnicotinonitrile **23** exhibited a good complexation as organo-ligand with Hg^{2+} (Scheme 20).⁴⁷

Fe₃O₄-supported Schiff-base copper(π) complexes **58** were reported by Mahmoudi-GomYek *et al.* Ligand **32** was synthesized *via* the reaction of 2,2'-[piperazine-1,4-diylbis-(methylene)]dianiline **30** and 2-hydroxy-3-methoxy benzaldehyde **31**. The reaction of FeCl₃··6H₂O **24**, FeCl₂·4H₂O **25** and NH₄OH in H₂O under N₂ atmosphere provided Fe₃O₄ MNPs **1**, which were functionalized by 3-chloropropyl(trimethoxy)silane (CPTMS) **18** to give Fe₃O₄@Si-PrCl **19**. The reaction of compound **32** with Fe₃O₄@Si-PrCl **19** gave the

Scheme 23 Synthesis of Fe₃O₄@SiO₂-acac-2ATP-Cu(II) MNPs 66.

(C)

Scheme 25 Synthesis of 2,4,6-tri-arylpyridines 71.

compound 57, which reacted with Cu(NO₃)₂ \cdot 9H₂O to yield Fe₃O₄-supported Schiff-base copper(II) complex 58 (Scheme 21).⁴⁸

Fe₃O₄@SPNC **58** was used as catalyst in the synthesis of pyrano[2,3-*b*]pyridine-3-carboxamide derivatives **61** *via* the three-component reaction of aldehydes **9**, 2-isocyanoacetamide **59**, and 3-cyano-6-hydroxy-4-methyl-pyridin-2(1*H*)-one **60** under solvent-free conditions at 80 °C (Scheme 22).⁴⁸

Similar Cu complexes on magnetic nanomaterials were also synthesized from Fe₃O₄@CPTMS MNPs **19** (ref. 49 and ⁵⁰) according to the literature. The reaction of Fe₃O₄@CPTMS MNPs **19**, acetylacetone **62** and sodium hydride in toluene at 80 °C under nitrogen atmosphere gave Fe₃O₄@SiO₂-*n*-Pr-acac MNPs **63**, which was reacted with 2-aminobenzenethiol **64** in EtOH under reflux condition and nitrogen atmosphere to provide Fe₃O₄@SiO₂-acac-2ATP **65**, followed by reacting with $Cu(NO_3)_2 \cdot 9H_2O$ in ethanol under reflux and nitrogen gas for 12 h to obtain Fe₃O₄@SiO₂-acac-2ATP-Cu(II) **66** (Scheme 23).⁵¹

 Fe_3O_4 @SiO₂-acac-2ATP-Cu(II) MNPs **66** was then employed as catalyst in the three-component reaction of aldehydes **9**, malononitrile **16**, and 3-cyano-6-hydroxy-4-methyl pyridine-2(1*H*)-one **67** under solvent-free conditions at 80 °C for the synthesis of 4*H*-pyrano[2,3-*b*]pyridine-3,6-dicarbonitrile derivatives **68** by Azarifar and co-works (Scheme 24).⁵¹

Gajaganti and his co-workers utilised nano-Fe₃O₄ as a catalyst in the synthesis of 2,4,6-tri-arylpyridines **71** *via* a threecomponent reaction of acetophenone derivatives **22**, methyl arenes **70**, and ammonium acetate **10** (Scheme 25).⁵²

Similar Fe₃O₄ multi-walled carbon nanotubes (MWCNTs) were prepared and employed as catalyst in the three-component reaction of ketones **72**, different cinnamaldehyde **73**, and ammonium acetate **10** to synthesize the functionalized pyridines **74** (Scheme 26).⁵³

The eggshell powder was coated on the surface of magnetic nano-Fe₃O₄ **1**, to give nano-Fe₃O₄@eggshell 75, which was treated with ClSO₃H to yield nano-magnetic acid catalyst Fe₃O₄@-Ca(HSO₄)₂ **76**. In this process, CaCO₃ from the eggshell was converted to Ca(HSO₄)₂ through reaction with ClSO₃H (Scheme 27).⁵⁴

conditions at 90 °C for 5–15 min (Scheme 28).⁵⁴

ammonium acetate 10, and malononitrile 16 under solvent-free

2.3. Ionic liquid-based magnetic nanomaterials

Nano-Fe₃O₄@Ca(HSO₄)₂ **76** was subsequently utilised in the synthesis of 2-amino-3-cyanopyridines **23** *via* four-component reaction of different benzaldehydes **9**, acetophenone **22**,

 $Fe_3O_4@O_2PO_2(CH_2)_2NH_2$ MNPs **78** was prepared according to the reported method.^{34,55} After dispersion in the ultrasonic bath, it was reacted with CF₃CO₂H to prepare Fe₃O₄@O₂PO₂(CH₂)₂-NH₃ CF₃CO₂ **79** (Scheme 29).⁵⁶

Scheme 32 Synthesis of imidazo[1,2-a]pyridines 89.

 $Fe_3O_4(@O_2PO_2(CH_2)_2NH_3^+ CF_3CO_2^-$ **79** was employed in the multicomponent reaction between various acetyl pyridines **80**, aryl aldehydes **9**, and ammonium acetate **10** under solvent-free reaction conditions at 120 °C to synthesize terpyridines **81** (Scheme 30).⁵⁷

CuI/Fe₃O₄ NPs@Biimidazole IL-KCC-1 **86** was prepared by Azizi *et al.* in 2020. Firstly, 1-methyl-3-(oxiran2-ylmethyl)-1*H*imidazol-3-ium chloride **83** and sodium methoxide were added to the prepared KCC-1 **82** in dimethylformamide (DMF), and stirred for 60 min under a nitrogen atmosphere at 60 °C. Methanol and DMF were subsequently evaporated under vacuum to obtain 1-methyl-3-(oxiran-2-yl-methyl)-1*H*-imidazolium chloride (ILCl-*g*-KCC-1) **84**.⁵⁸ Then, solid potassium hydroxide was added to ILCl-*g*-KCC-1 **84** to yield IL-KCC-1 **85** by replacing chloride ions with hydroxide ions. Fe₃O₄ NPs were subsequently doped on the substrate of IL-KCC-1 84 and treated with CuI/MeOH to obtain CuI/Fe $_3O_4$ NPs@Biimidazole IL-KCC-1 86 (Scheme 31).

CuI/Fe₃O₄ NPs@IL-KCC-1 **86** was investigated in the threecomponent reaction of 2-aminopyridine **87**, aldehydes **9**, phenylacetylene **88**, and CTAB in H₂O under reflux condition to obtaib imidazo[1,2-*a*]pyridines **89** in high yields (Scheme 32).⁵⁹

Shojaei *et al.* was studied the catalytic activity of guanidinium hydrogen sulfate on Fe_3O_4 nanoparticles **91** in the pseudo-four-component reactions of aryl aldehydes **9** with 3amino-1-phenyl-2-pyrazolin-5-one **90** to give spiro[pyrazolepyrazolo[3,4-*b*]pyridine]-dione derivatives **92** under mild conditions (Scheme 33).⁶⁰

2.4. Bifunctional magnetic catalysts

In 2019, Edrisi *et al.* synthesized $g-C_3N_4$ **94** according to the reported method.⁶¹ $g-C_3N_4$ **94** was functionalized with Fe₃O₄ nanoparticles⁶² to give Fe₃O₄@g-C₃N₄ **95**. Finally, Fe₃O₄@g-C₃N₄–SO₃H **96** was washed with methanol and ethyl acetate and afterward dried under vacuum at 60 °C (Scheme 34).⁶³

 Fe_3O_4 @g-C₃N₄–SO₃H **96** was then utilized in the synthesis of pyridine derivatives **98** *via* the one-pot multicomponent reaction of different aldehydes **9**, various ketones **97**, ammonium acetate **10**, and malononitrile **16** in H₂O under ultrasonic irradiation (Scheme 35).⁶³

Torabi and *et al.* prepared Ligand **101** *via* the reaction of 1*H*benzo[*d*]imidazol-2-amine **100** and compound **99** under solventfree conditions. Fe₃O₄ was then functionalized with tetraethyl orthosilicate (TEOS) in toluene under reflux conditions to give Fe₃O₄@SiO₂ **4**, which was reacted with ligand **101** to yield Fe₃-O₄@SiO₂@(CH₂)₃-urea-benzimidazole **102**, followed by the reaction with chlorosulfuric acid in dichloromethane to obtain Fe₃O₄@SiO₂@(CH₂)₃-urea-benzimidazole sulfonic acid **103** (Scheme 36).⁶⁴

 Fe_3O_4 (2) O_2 (CH₂)₃-urea-benzimidazole sulfonic acid **103** was employed in the synthesis of 2-amino-3-cyano pyridines **23** through the multicomponent reaction of benzaldehyde **9**,

malononitrile 16, methyl isopropyl ketone 31, and ammonium acetate 10 under solvent-free conditions at 70 $^{\circ}$ C (Scheme 37).⁶⁴

Initially, according to previous works,⁶⁵ Fe₃O₄@SiO₂@Pr-Cl **19** was prepared and dispersed in dry DMF, and then reacted with ciprofloxacin **104** to give Fe₃O₄@SiO₂@Pr-ciprofloxacin **105** (Scheme 38).⁶⁶

 Fe_3O_4 @SiO₂@Pr-Cip **105** was then investigated in the synthesis of imidazo[1,2-*a*]pyridines **107** through the threecomponent reaction of various benzaldehyde **9**, 2-aminopyridine **87**, and cyclohexyl isocyanide **106** (Scheme 39).⁶⁶

RSC Advances

Mohammadi *et al.* synthesized Fe₂O₃ nanoparticles **1** according to a previously reported method.⁶⁷ Calcination of Fe₂O₃ provided γ -Fe₂O₃ **108**, which was convered to γ -Fe₂-O₃@SiO₂ MNPs **109** by the reaction with tetraethyl orthosilicate (TEOS) **3**, followed by the functionalization with γ -aminobutyric acid **110** to yield γ -Fe₂O₃@SiO₂-aminobutyric acid nanoparticles **111**. Then, it was dispersed in chloroform and reacted with chlorosulfonic acid to provide γ -Fe₂O₃@SiO₂ γ -aminobutyric acid-SO₃H **112** (Scheme 40).⁶⁸

 γ -Fe₂O₃@SiO₂@4-(sulfoamino)butanoic acid-SO₃H **112** was utilized in the synthesis of 5-(aryl)-5*H*-spiro[diindeno[1,2-*b*:2',1'-*e*]pyridine-11,30-indoline]-2',10,12-trione derivatives **115** through the pseudo four-component reaction of 1,3-indandione **47**, isatins **113** with various aromatic amines **114** (Scheme 41).⁶⁸

 Fe_3O_4 (a)Si-Pr-Cl **19** was reacted with chitosan and acetic acid solutions to provide chitosan-coated MNPs **116**, which were

modified with 2-formylpyridine **117** to give compound **118**, followed by the reaction with manganese chloride to provide manganese Schiff-base complex Fe_3O_4 @CSBMn **119** (Scheme 42).^{69,70}

 Fe_3O_4 @CSBMn **119** was employed in the synthesis of 3-iminoaryl-imidazo[1,2-*a*]pyridine (IAIP) derivatives **122** through the three-component reaction of aryl halide derivatives **120**, trime-thylsilyl cyanide **121**, and 2-aminopyridine **89** (Scheme 43). According to the results, the aldehydes with an electron-withdrawing group provided higher yields in comparison with electron-donating groups.⁷⁰

Multi-walled carbon nanotubes systems MWCNTs-COOH **123** (ref. 71) were synthesized according to the literature. A mixture of $FeCl_3 \cdot 6H_2O$ and $FeCl_2 \cdot 4H_2O$ was added to MWCNTs-COOH **123** in distilled water and stirred at 50 °C to give the magnetic multi-walled carbon nanotubes (MMWCNTs) **124**,

Ar= C₆H₅, 4-MeC₆H₄, 4-OMe C₆H₄, 4-BrC₆H₄, 4-ClC₆H₄, 4-FC₆H₄ 4-NO₂C₆H₄, 2-OHC₆H₄, C₁₀H₇, C₄H₃S, C₄H₃O

Scheme 43 Synthesis of 3-iminoaryl-imidazo[1,2-a]pyridine (IAIP) derivatives 122.

Scheme 45 Synthesis of dihydro-1*H*-indeno[1,2-*b*] Pyridines 128.

which were subsequently reacted with 1-ethyl-3-(3-dimethyl aminopropyl) carbodiimide hydrochloride (EDC·HCl) and *N*-hydroxysuccinimide (NHS) to obtain MMWCNTs-D-NH₂ **125** followed by reaction with 1,4-butanesultone **126** to yield MMWCNTs-D-(CH₂)₄-SO₃H **127** (Scheme 44).⁷²

MMWCNTs-D-(CH₂)₄-SO₃H **127** was employed in the synthesis of dihydro-1*H*-Indeno[1,2-*b*] Pyridines **128** by the reaction of various aldehydes **9**, 1,3-indandione **47**, ethyl ace-toacetate **7**, and ammonium acetate **10** (Scheme 45).⁷²

3. Conclusions

Due to the high importance of magnetic nano-catalysts, featuring non-toxic nature, high surface area, simple preparation, easy surface modification, and simple separation, such systems have relevant applications in organic synthesis and catalysis. In this contribution, the synthesis methods of magnetic nano-catalysts have been disclosed in view of their applications in the synthesis of pyridine derivatives. According to most studies, these catalysts have excellent activities to target products, also featuring high reusability with the possibility to be recycled several times without reducing their catalytic activities.

Conflicts of interest

The authors declare no conflict of interest.
