

Contents

Introduction to Magnetism	
<i>Claudine Lacroix</i>	1
1 Magnetism of Isolated Atoms and Ions	1
2 Atoms and Ions in Solids	3
3 Exchange Interactions	5
4 Magnetism at Finite Temperature	11
X-ray and Electron Spectroscopies: An Introduction	
<i>Didier Sébilleau</i>	15
1 Introduction	15
2 The Photon-Atom Interaction	18
3 By-Products of the Photon-Atom Interaction	29
4 An Overview of Some Particular Spectroscopies	37
5 Conclusion	54
References	54
Synchrotron Radiation	
<i>Mikael Eriksson</i>	59
1 Dipole Radiation from Accelerating Charges	59
2 Synchrotron Radiation Damping in a Storage Ring	62
3 Insertion Devices	64
4 Flux and Brilliance	67
5 The Computer Way	68
References	70
X-ray Magnetic Circular Dichroism: Historical Perspective and Recent Highlights	
<i>Andrei Rogalev, Fabrice Wilhelm, Nicolas Jaouen, José Goulon, and Jean-Paul Kappler</i>	71
1 History of X-ray Magnetic Circular Dichroism	71
2 Physical Content of XMCD and Sum Rules	77
3 Practice with Sum Rules: XMCD at Au $L_{2,3}$ Edges in Au_4Mn	79
4 Highlights of Recent Advances in Hard X-ray Magnetic Circular Dichroism	84
References	89

Spin-Polarized Photoemission

<i>Jürg Osterwalder</i>	95
1 Introduction	95
2 Angle-Resolved Photoemission Spectroscopy (ARPES) and Fermi Surface Mapping	97
3 Sources of Spin Polarization in ARPES Data	102
4 Measurement of Spin Polarization in ARPES	108
5 Case Studies	111
6 Outlook	118
References	119

Band-Structure Theory of Dichroism

<i>Alexander Yaresko, Alexander Perlov, Victor Antonov, and Bruce Harmon</i>	121
1 Introduction	121
2 Classical Description of Magneto-Optical Effects	122
3 Linear Response Theory	128
4 MO Effects in the X-ray Region	130
5 Spin Polarized Relativistic Calculations	131
6 Matrix Elements of the Electron–Photon Interaction	134
7 “Toy” XMCD Spectra	137
References	139

Hitchhiker’s Guide to Multiplet Calculations

<i>Gerrit van der Laan</i>	143
1 Introduction	143
2 Spin-Orbit Interaction Versus Coulomb Interaction	145
3 Multiplet Structure	146
4 Reduced Matrix Elements	150
5 Selection Rules for Electric-Dipole Transitions	151
6 Angular Momentum Coupling	152
7 Coefficients of Fractional Parentage	154
8 Coulomb and Exchange Interaction	155
9 Hartree-Fock Calculations	159
10 Configuration Interaction	160
11 Second Quantization	162
12 Spin-Orbit Interaction	164
13 Zeeman Interaction	164
14 Crystal Field Interaction	165
15 Fundamental Spectra	173
16 Second-Order Processes	174
17 Symmetry Properties of Spherical Tensors	177
18 Electric and Magnetic Multipole Fields	181
19 Symmetry of Multipole Transitions	184
20 X-ray Optical Activity	186

21 Statistical Moment Analysis 187
 22 Spectral Moments for Ground State Tensors 189
 23 Conclusions and Outlook 192
 References 195

Resonant X-ray Scattering: A Theoretical Introduction

Massimo Altarelli 201
 1 Introduction 201
 2 Interaction of Radiation with Electronic Matter 203
 3 Cross Section for Non-Resonant Elastic Scattering 206
 4 Resonant Scattering 218
 5 Resonant Elastic Scattering: Recent Developments 230
 6 Resonant Inelastic X-ray Scattering 235
 References 240

High Angle Magnetic X-ray Diffraction

Catherine Dufour, Karine Dumesnil, and Thierry Gourieux 243
 1 Introduction 243
 2 Basic Concept of Magnetic X-ray Scattering 246
 3 Selected Examples 255
 4 Conclusion 270
 References 271

Magnetic Imaging

Wolfgang Kuch 275
 1 Motivation 275
 2 Overview 277
 3 Techniques for Magnetic Domain Imaging 282
 4 Summary and Outlook 314
 References 318

Dynamic Aspects of Magnetism

Christian H. Back, Korbinian Perzlmaier, and Matthias Buess 321
 1 Introduction 321
 2 Introduction to Ferromagneto-Dynamics 322
 3 The Energy Landscape 324
 4 The SLAC Experiment: A Simple Experiment Explained
 by the Macrospin Model 328
 5 Time-Resolved Kerr Microscopy 333
 6 Connection to Synchrotron Based Experiments 340
 References 342

Molecular Magnetism

Stephen J. Blundell 345
 1 Introduction 345
 2 Magnets based on Stable Free Radicals 346
 3 Prussian Blues 352

X Contents

4	Spin Crossover	352
5	TCNE Salts	356
6	BEDT-TTF and BEDT-TSF Salts	357
7	One-dimensional Systems	361
8	Single Molecule Magnets	363
9	Conclusion	369
	References	369

Magnetism under Pressure with Synchrotron Radiation

Matteo d'Astuto, Alessandro Barla, Nolwell Kernavanois, Jean-Pascal Rueff, Francois Baudelet, Rudolf Ruffer, Luigi Paolasini, and Bernard Couzinet

		375
1	Introduction	375
2	Magnetic State and Interactions in Dense Systems	376
3	Synchrotron Radiation Methods for Magnetism under High Pressure	379
4	Application of Synchrotron Radiation Techniques to Typical Case Studies of Magnetic Properties under Pressure	385
5	Conclusion	397
	References	397

X-ray Spectroscopy and Magnetism in Mineralogy

Philippe Sainctavit, Sandrine Brice-Profeta, Emilie Gaudry, Isabelle Letard, and Marie-Anne Arrio

		401
1	Introduction	401
2	Metallic Phases of the Planetary Cores	403
3	Localized Magnetism	404
4	Paleomagnetism	410
5	Conclusion	424
	References	425

Materials for Spintronics

Agnès Barthélémy and Richard Mattana

		429
1	Introduction	429
2	Mechanism of GMR, TMR and the Problem of Spin Injection in Semiconductors	431
3	Alternative Ferromagnetic Conducting Materials	441
4	Insulating Barrier for Magnetic Tunnel Junctions	450
5	Diluted Magnetic Semiconductors	452
6	New Materials Emerging in the Field of Spintronics	455
	References	457
