# CONTENTS

*Preface xv*

## **PART I Process Management and Strategy 1**

### **Chapter 1 Products, Processes, and Performance 2**

- Introduction 2
- 1.1 The Process View of Organizations 3
- 1.2 Performance Measures 7
  - 1.2.1 The Importance of Measurement: Management by Fact 7
  - 1.2.2 Types of Measures: Financial, External, and Internal 7
- 1.3 Products and Product Attributes 10
- 1.4 Processes and Process Competencies 13
- 1.5 Enabling Process Success 14
- 1.6 Some Basic Process Architectures 15
- 1.7 The Plan of the Book 17
- Summary 18
- Key Terms 18
- Discussion Questions 18
- Selected Bibliography 19

### **Chapter 2 Operations Strategy and Management 20**

- Introduction 20
- 2.1 Strategic Positioning and Operational Effectiveness 21
- 2.2 The Strategy Hierarchy 23
- 2.3 Strategic Fit 25
- 2.4 Focused Operations 27
- 2.5 Matching Products and Processes 30
- 2.6 The Operations Frontier and Trade-Offs 31
- 2.7 The Evolution of Strategy and Operations Management 37
- 2.8 The Opportunity Today in Service Operations 40
- Summary 41
- Key Terms 42
- Discussion Questions 42
- Selected Bibliography 43

## **PART II Process Flow Metrics 45**

### **Chapter 3 Process Flow Measures 46**

- Introduction 46
- 3.1 The Essence of Process Flow 47
- 3.2 Three Key Process Measures 48

3.3	FlowTime, Flow Rate, and Inventory Dynamics	50
3.4	Throughput in a Stable Process	55
3.5	Little’s Law: Relating Average FlowTime, Throughput, and Average Inventory	55
3.5.1	Material Flow	57
3.5.2	Customer Flow	57
3.5.3	Job Flow	58
3.5.4	Cash Flow	58
3.5.5	Cash Flow (Accounts Receivable)	58
3.5.6	Service Flow (Financing Applications at Auto-Moto)	59
3.6	Analyzing Financial Flows through Financial Statements	63
3.6.1	Assessing Financial Flow Performance	63
3.6.2	Cash-to-Cash Cycle Performance	67
3.6.3	Targeting Improvement with Detailed Financial Flow Analysis	67
3.7	Two Related Process Measures: Takt Time and Inventory Turns (Turnover Ratio)	70
3.7.1	Takt Time	70
3.7.2	Inventory Turns	70
3.8	Linking Operational to Financial Metrics: Valuing an Improvement	71
3.8.1	Linking Operational Improvements to NPV	71
3.8.2	Linking Operational Improvements to Financial Ratios	73
	Summary	75
	Key Equations and Symbols	75
	Key Terms	76
	Discussion Questions	76
	Exercises	76
	Selected Bibliography	79

## **Chapter 4 Flow-Time Analysis 80**

	Introduction	80
4.1	Flow-Time Measurement	81
4.2	The Process Flowchart	83
4.3	Flow Time and Critical Paths	84
4.4	Theoretical Flow Time and the Role of Waiting	86
4.4.1	Flow-Time Efficiency	87
4.5	Levers for Managing Theoretical FlowTime	90
4.5.1	Moving Work Off the Critical Path	91
4.5.2	Reduce Non-Value-Adding Activities	91
4.5.3	Reduce the Amount of Rework	92
4.5.4	Modifying the Product Mix	92
4.4.5	Increase the Speed of Operations	92
4.4.6	Zhang & Associates Revisited	93

Summary	94
Key Equations and Symbols	95
Key Terms	95
Discussion Questions	95
Exercises	96
Selected Bibliography	97
Appendix 4.1 Subprocesses and Cascading	98
Appendix 4.2 The Critical Path Method	99
Appendix 4.3 Rework and Visits	101

## **Chapter 5 Flow Rate and Capacity Analysis 102**

Introduction	102
5.1 Flow Rate Measurements	103
5.2 Resources and Effective Capacity	103
5.2.1 Resources and Resource Pools	103
5.2.2 Effective Capacity	104
5.2.3 Capacity Utilization	105
5.2.4 Extensions: Other Factors Affecting Effective Capacity	106
5.3 Effect of Product Mix on Effective Capacity and Profitability of a Process	106
5.3.1 Effective Capacity for Product Mix	107
5.3.2 Optimizing Profitability	108
5.4 Capacity Waste and Theoretical Capacity	109
5.4.1 Theoretical Capacity	109
5.4.2 Theoretical Capacity Utilization	110
5.5 Levers for Managing Throughput	110
5.5.1 Throughput Improvement Mapping	111
5.5.2 Increasing Resource Levels	112
5.5.3 Reducing Resource Capacity Waste	112
5.5.4 Shifting Bottlenecks and the Improvement Spiral	113
Summary	114
Key Equations and Symbols	114
Key Terms	114
Discussion Questions	115
Exercises	115
Selected Bibliography	116
Appendix 5.1 Other Factors Affecting Effective Capacity: Load Batches, Scheduled Availability, and Setups	117
Appendix 5.2 Optimizing Product Mix with Linear Programming	119

## **Chapter 6 Inventory Analysis 121**

Introduction	121
6.1 Inventory Classification	122

- 6.2 Inventory Benefits 125
  - 6.2.1 Economies of Scale 125
  - 6.2.2 Production and Capacity Smoothing 126
  - 6.2.3 Stockout Protection 126
  - 6.2.4 Price Speculation 127
- 6.3 Inventory Costs 128
- 6.4 Inventory Dynamics of Batch Purchasing 129
- 6.5 Economies of Scale and Optimal Cycle Inventory 131
- 6.6 Effect of Lead Times on Ordering Decisions 138
- 6.7 Periodic Ordering 140
- 6.8 Levers for Managing Inventories 142
- Summary 143
- Key Equations and Symbols 144
- Key Terms 144
- Discussion Questions 144
- Exercises 145
- Selected Bibliography 146
- Appendix 6.1 Derivation of EOQ Formula 147
- Appendix 6.2 Price Discounts 148

## **PART III Process Flow Variability 151**

### **Chapter 7 Managing Flow Variability: Safety Inventory 152**

- Introduction 152
- 7.1 Demand Forecasts and Forecast Errors 154
- 7.2 Safety Inventory and Service Level 155
  - 7.2.1 Service Level Measures 156
  - 7.2.2 Continuous Review, Reorder Point System 157
  - 7.2.3 Service Level Given Safety Inventory 159
  - 7.2.4 Safety Inventory Given Service Level 161
- 7.3 Optimal Service Level: The Newsvendor Problem 163
- 7.4 Leadtime Demand Variability 170
  - 7.4.1 Fixed Replenishment Lead Time 170
  - 7.4.2 Variability in Replenishment Lead Time 172
- 7.5 Pooling Efficiency through Aggregation 173
  - 7.5.1 Physical Centralization 174
  - 7.5.2 Principle of Aggregation and Pooling Inventory 177
- 7.6 Shortening the Forecast Horizon through Postponement 179
- 7.7 Periodic Review Policy 180
- 7.8 Levers for Reducing Safety Inventory 182
- Summary 183
- Key Equations and Symbols 183

Key Terms	184
Discussion Questions	184
Exercises	184
Selected Bibliography	186
Appendix	Calculating Service Level for a Given Safety Inventory 187

## **Chapter 8 Managing Flow Variability: Safety Capacity 188**

Introduction	188
8.1 Service Process and Its Performance	190
8.1.1 Service Processes	190
8.1.2 Service Process Attributes	192
8.1.3 Service Process Performance	192
8.1.4 Relationships between Performance Measures	196
8.2 Effect of Variability on Process Performance	197
8.3 Drivers of Process Performance	200
8.3.1 The Queue Length Formula	200
8.3.2 The Exponential Model	202
8.4 Process Capacity Decisions	205
8.5 Buffer Capacity, Blocking, and Abandonment	206
8.5.1 Effect of Buffer Capacity on Process Performance	207
8.5.2 The Buffer Capacity Decision	208
8.5.3 Joint Processing Capacity and Buffer Capacity Decisions	210
8.6 Performance Variability and Promise	211
8.7 Customer Pooling and Segregation	213
8.7.1 Pooling Arrivals with Flexible Resources	213
8.7.2 Segregating Arrivals with Specialized Resources	215
8.8 Performance Improvement Levers	216
8.8.1 Capacity Utilization Levers	217
8.8.2 Variability Reduction Levers	218
8.8.3 Capacity Synchronization Levers	219
8.8.4 Buffer Capacity Levers	220
8.8.5 Pooling and Segregation Levers	220
8.9 Managing Customer Perceptions and Expectations	221
Summary	222
Key Equations and Symbols	223
Key Terms	223
Discussion Questions	224
Exercises	224
Selected Bibliography	227
Appendix	The Exponential Model with Finite Buffer Capacity 228

**Chapter 9 Managing Flow Variability: Process Control and Capability 229**

Introduction 229

9.1 Performance Variability 231

9.2 Analysis of Variability 233

9.2.1 Check Sheets 233

9.2.2 Pareto Charts 234

9.2.3 Histograms 235

9.2.4 Run Charts 237

9.2.5 Multi-Vari Charts 238

9.3 Process Control 240

9.3.1 The Feedback Control Principle 240

9.3.2 Types and Causes of Variability 241

9.3.3 Control Limit Policy 243

9.3.4 Control Charts 244

9.3.5 Cause–Effect Diagrams 252

9.3.6 Scatter Plots 253

9.4 Process Capability 254

9.4.1 Fraction of Output within Specifications 255

9.4.2 Process Capability Ratios ( $C_{pk}$  and  $C_p$ ) 256

9.4.3 Six-Sigma Quality 257

9.4.4 Capability and Control 260

9.5 Process Capability Improvement 260

9.5.1 Mean Shift 260

9.5.2 Variability Reduction 261

9.5.3 Effect of Process Improvement on Process Control 262

9.6 Product and Process Design 263

9.6.1 Design for Producibility 263

9.6.2 Robust Design 265

9.6.3 Integrated Design 265

Summary 226

Key Equations and Symbols 267

Key Terms 267

Discussion Questions 268

Exercises 268

Selected Bibliography 270

**PART IV Process Integration 271**

**Chapter 10 Lean Operations: Process Synchronization and Improvement 272**

Introduction 272

10.1 Processing Networks 273

10.2 The Process Ideal: Synchronization and Efficiency 274

10.3	Waste and Its Sources	275
10.4	Improving Flows in a Plant: Basic Principles of Lean Operations	278
10.4.1	Improving Process Architecture: Cellular Layouts	280
10.4.2	Improving Information and Material Flow: Demand Pull	281
10.4.3	Improving Process Flexibility: Batch-Size Reduction	284
10.4.4	Quality at Source: Defect Prevention and Early Detection	285
10.4.5	Reducing Processing Variability: Standardization of Work, Maintenance, and Safety Capacity	286
10.4.6	Visibility of Performance	287
10.4.7	Managing Human Resources: Employee Involvement	287
10.4.8	Supplier Management: Partnerships	288
10.5	Improving Flows in a Supply Chain	289
10.5.1	Lack of Synchronization: The Bullwhip Effect	290
10.5.2	Causes of the Bullwhip Effect	291
10.5.3	Levers to Counteract the Bullwhip Effect	293
10.6	The Improvement Process	295
10.6.1	Process Stabilization: Standardizing and Controlling the Process	295
10.6.2	Continuous Improvement: Management by Sight and Stress	296
10.6.3	Business Process Reengineering: Process Innovation	297
10.6.4	Benchmarking: Heeding the Voices of the Best	298
10.6.5	Managing Change	298

# PREFACE

In this book, we present a novel approach to studying the core concepts in operations, which is one of the three major functional fields in business management, along with finance and marketing. We view the task, and the *raison d'être*, of operations management as structuring (designing), managing, and improving organizational *processes* and use the process view as the unifying paradigm to study operations. We address manufacturing as well as service operations in make-to-stock as well as make-to-order environments.

We employ a structured data-driven approach to discuss the core operations management concepts in three steps:

- Model and understand a business process and its flows.
- Study causal relationships between the process structure and operational and financial performance metrics.
- Formulate implications for managerial actions by filtering out managerial “levers” (process drivers) and their impact on operational and financial measures of process performance.

## NEW TO THIS EDITION

The first edition of this book was published in 1999 and reflected our experiences from teaching the core Operations Management course at the Kellogg School of Management of Northwestern University. The second edition, published in 2006, improved exposition and clarified the link between theory and practice. While this third edition retains the general process-view paradigm, we have striven to sharpen the development of the ideas in each chapter, illustrate with contemporary examples from practice, and eliminated some content to make room for some new content, such as:

- Opening vignettes and real-life examples of how the theory can be applied in practice have been made current. In addition, exposition of material in the chapters has been further improved with technical derivations details and other tangential ideas relegated to chapter appendices.
- Chapter 4 has been completely revised, with an emphasis on measurement, analysis of critical path, and management approaches to leadtime improvements. Technical analysis has been shifted to appendices.
- Chapter 5 has been substantially revised with emphasis on effective capacity and bottleneck management, on the effects of product mix on capacity, and on reduction of capacity waste.
- Chapter 6 now includes discussion of quantity discount policies. Discussions of periodic review policies have been added to Chapters 6 and 7.
- Chapter 8 has undergone a complete revision and reorganization to improve flow of concepts; we have also added some discussion on priority processing.
- Chapter 9 has more details on control charts, includes fraction defective chart, recent applications, discussion of integrated design, and total quality management.
- Answers to selected exercises from Chapters 3 to 9 appear at the end of the book.
- The end-of-chapter and end-of-book features have been updated.

Finally, we have removed iGrafx simulation (both the software and the associated sample models) from this edition.

## OVERVIEW

Our objective is to show how managers can design and manage process structure and process drivers to improve the performance of any business process. The book consists of four parts.

In Part I, “Process Management and Strategy,” we introduce the basic concepts of business processes and management strategy. Processes are the core technologies of any organization to design, produce and deliver products and services that satisfy external and internal customer needs. Processes involve transforming inputs into outputs by means of capital and labor resources that carry out a set of interrelated activities. The existence of trade-offs in process competencies implies that world-class operations must align their competencies with the desired product attributes and overall competitive priorities as formulated by the competitive strategy.

In Part II, “Process Flow Metrics,” we examine key process measures, their interrelationships, and managerial levers for controlling them. In particular, process flow time, flow rate or throughput, and inventory are three fundamental operational measures that affect the financial measures of process performance. Flow time can be improved by restructuring and shortening the time-critical path of activities; throughput can be improved by increasing the bottleneck capacity, and inventory can be decreased by reducing the batch sizes, streamlining the process, or reducing variability. Yet, throughout this part, the focus is on the average values, ignoring for now the impact of variability in process performance.

In Part III, “Process Flow Variability,” we study the effect of variability in flows and processing on the process performance and the managerial levers to plan for and control it. Safety inventory is used to maintain the availability of inputs and outputs in spite of variability in inflows and demands in the make-to-stock environment. Safety capacity is used to minimize waiting times due to variability in inflows and processing times in the make-to-order environment. Safety time is used to provide a reliable estimate of the response time to serve a customer. Finally, feedback control is used to monitor and respond to variability in process performance dynamically over time.

In Part IV, “Process Integration,” we conclude with principles of synchronization of flows of materials and information through a network of processes most economically. The ideal is to eliminate waste in the form of excess costs, defects, delays, and inventories. Instead of responding to the economies of scale and variability in flows, the long-term approach is to eliminate the need for such responses by making processes lean, flexible, and predictable. It requires continual exposure and elimination of sources of inefficiency, rigidity, and variability and use of information technology to integrate various subprocesses. The goal is to design and control the process for continuous flows without waits, inventories, and defects. We close with the different philosophies of process improvement toward achieving this goal.

In Appendix I, we give a summary of the “levers” to manage business processes. We hope that this checklist will be useful to the practitioner. We assume that our readers have knowledge of some basic concepts in probability and statistics; for completeness, we summarize these as background material in Appendix II.

## INSTRUCTOR RESOURCES

- **Instructor Resource Center:** The Instructor Resource Center contains the electronic files for the test bank, PowerPoint slides, and the Solutions Manual. ([www.pearsonhighered.com/anupindi](http://www.pearsonhighered.com/anupindi)).

- **Register, Redeem, Login:** At [www.pearsonhighered.com/irc](http://www.pearsonhighered.com/irc), instructors can access a variety of print, media, and presentation resources that are available with this text in downloadable, digital format. For most texts, resources are also available for course management platforms such as Blackboard, WebCT, and Course Compass.
- **Need help?** Our dedicated technical support team is ready to assist instructors with questions about the media supplements that accompany this text. Visit <http://247.pearsoned.com/> for answers to frequently asked questions and toll-free user support phone numbers. The supplements are available to adopting instructors. Detailed descriptions are provided on the Instructor Resource Center.

### **Instructor's Solutions Manual**

The Instructor's Solutions Manual, updated by the authors, is available to adopters as a download from the Instructor Resource Center.

### **Test Item File**

The test item file, updated by the authors, is available to adopters as a downloaded from the Instructor Resource Center.

### **PowerPoint Presentations**

The PowerPoint presentations, updated by the authors, are available to adopters as a downloaded from the Instructor Resource Center.

## **ACKNOWLEDGMENTS**

We gratefully acknowledge the feedback from our full-time, part-time, and executive management students at our respective institutions and numerous adopters of the textbook at other institutions. Our colleagues Krishnan Anand (now at David Eccles School of Business, University of Utah), Sarang Deo, Martin (Marty) Lariviere, Andy King (now at Dartmouth College), and Matt Tuite (now retired) have, over time, given us many suggestions for improvement. In particular, Anand suggested the original Loan Application Flow example in Chapter 3, while Marty offered us several new exercises. (Instructors know that good problem sets are golden.) Andy pointed out the need to explicitly account for setup times in determining flow rate more accurately. In addition, we also benefited from the suggestions by several colleagues at other universities. We are particularly indebted to Larry Robinson at Cornell University, George Monahan at the University of Illinois at Urbana–Champaign, Kevin Gue and Ken Doerr of the Naval Postgraduate School at Monterey, and Marty Puterman at the University of British Columbia.

The manuscript has benefited significantly from extensive and meticulous reviews from Amy Whitaker, developmental editor at Pearson Prentice Hall. We are thankful to her for suggesting, among other things, the idea of a glossary of terms and helping us prepare this list. Several people from the staff at Pearson Prentice Hall have really worked hard in patiently coordinating the entire project. In particular, we are thankful to Mary Kate Murray, Senior Project Manager; Chuck Synovec, Senior Acquisition Editor; Anne Fahlgren, Executive Marketing Manager; Clara Bartunek, Production Project Manager. We also thank Mohinder Singh of Aptara Incorporation for his assistance with the production of the book.

Finally, all of us have been influenced in various ways by the way we were taught operations at our respective alma maters. Parts of the book reflect what each of us imbibed from the various classes we took. So we thank our mentors and other faculty at Carnegie Mellon University, Stanford University, the State University of New York at Stony Brook, and the University of California at Berkeley. Last, but not least, we would like to thank our families for their support during this effort.
