

## MASARIDAE (HYMENOPTERA, VESPOIDEA) OF TURKEY

Erol Yıldırım<sup>(1)</sup>

Hikmet Özbeğ<sup>(1)</sup>

**SUMMARY:** *This study is based upon material collected from different localities of Turkey between 1976-1996, and the other related studies are reviewed.*

*In this study, 15 species and subspecies belonged to 4 genera in the subfamily Masarinae are recorded. The type localities of 4 species and 2 subspecies are in Turkey. Some new localities are found for some species which have already been reported in Turkey.*

## TÜRKİYE'NİN MASARIDAE (HYMENOPTERA, VESPOIDEA) TÜRLERİ

**ÖZET:** *Bu çalışmada, Türkiye'nin değişik yörelerinden 1976-1996 yıllarında toplanan Masaridae örnekleri ile bu konuda bügüne kadar Türkiye'de yapılan çalışmalarla tespit edilen tür ve alttürler değerlendirilmeye alınmış ve sonuçta Masarinae altfamilyasına ait 4 cinsle bağlı 15 tür ve alttürün bulunduğu tespit edilmiştir. Bunlardan, 4 tür ve 2 alttürün tip lokalitelerinin Türkiye olduğu görülmüştür. Ayrıca, daha önce Türkiye'de bulunduğu belirtilen türlerin çoğu için yeni lokaliteler tespit edilmiştir.*

### INTRODUCTION

The family Masaridae known as pollen wasps derived into two subfamilies, Euparagiinae and Masarinae (Borror et al., 1981). Euparagiinae includes 9 species in one genus and distributed in only southwestern nearctic region, Masarinae has about 250 species in 19 genera and distributed in Australia, southern Africa , Neotropics, U.S.A. and Mediterranean regions (Carpenter, 1991).

Masarinae make nests of mud or sand attached to rocks or twigs and provision their nests with pollen and nectar; Euparagiinae constructs nests in ground with a curved tunnel at the surface and provision their nests with weevil larvae (Borror et al., 1981).

Richards (1962), Gusenleitner (1966, 1967, 1973, 1988, 1992) and Bytinski-Salz and Gusenleitner (1971) recorded and described several new species and subspecies from Turkey.

## MATERIAL AND METHOD

The material of the family Masaridae was collected from different localities of Turkey in 1976-1996. Flowered plants were monitored for visits by wasps and then they were swept by insect net through vegetation.

## RESULTS

15 species and subspecies of 4 genera in the subfamily Masarinae of Masaridae were reported in Turkey.

### MASARINAE
