1	The study of mass extinctions	1
	Introduction	1
	Historical background	2
	Periodicity of mass extinctions	4
	Mass extinctions: terminology and analysis	13
	Mass extinctions: different in kind?	17
	The biological significance of mass extinctions	19
	Palaeoenvironmental analysis	20
2	Extinctions in the early history of the Metazoa	24
	Correlation of the Vendian and Lower Cambrian	24
	Vendian extinctions	26
	The Early Cambrian radiation	29
	Late Early Cambrian extinctions	31
	Possible causes of the Vendian–Early Cambrian biotic events	32
	Biomere boundaries: Late Cambrian mass extinctions?	34
3	Latest Ordovician extinctions: one disaster after another	39
	Biostratigraphy	40
	What went extinct?	41
	Boundary sections	49
	Glaciation and sea-level changes	54
	Stable isotopes	55
	Trace metals	57
	Extinction mechanisms	57
4	Crises of the Late Devonian: the Kellwasser and Hangenberg events	62
	Correlation and the Late Devonian world	63
	Extinctions of the Late Devonian	65
	How selective and how sudden were the extinctions?	74
	Boundary sections	76
	Sea-level changes and glaciation	78
	Geochemistry	82
	Causes of the extinctions	85
	A mid-Carboniferous mass extinction?	92

5	Palaeozoic nemesis	94
	Stratigraphy	95
	What went extinct?	98
	Boundary sections	117
	Sea-level changes	125
	Geochemical evidence	126
	Extinction mechanisms	131
6	Extinctions within and at the close of the Triassic	142
	The Smithian–Spathian boundary event	143
	Extinction within the Carnian	144
	The end-Triassic event	147
	A discussion of possible causes	156
7	Minor extinctions of the Jurassic	161
	The Pliensbachian–Toarcian event	161
	The Tithonian event	166
	Other possible extinction events	168
8	Minor mass extinctions of the marine Cretaceous	170
	Aptian mass extinction: a missing event	170
	The late Cenomanian extinction event	171
9	Death at the Cretaceous–Tertiary boundary	184
	Recent developments	185
	Stratigraphy	189
	Extinctions in the oceans	190
	Extinctions on the continents	201
	Extinction selectivity	204
	Geochemical changes across the boundary	207
	Possible causal factors	210
	Recovery after the extinction	219
10	Cenozoic extinctions	223
	The end-Palaeocene event in the deep ocean	223
	Extinctions in the late Eocene and early Oligocene	227
	The marine realm	227
	The terrestrial realm	232
	Events in the Neogene	235
11	The causes of mass extinctions	242
	Bolide impact	243
	Volcanism	245
	Climate	246
	Marine regression	248
	Anoxia and transgression	250
	Conclusions	251
	References	253
	Index	309
