Matrix Diagonal Stability in Systems and Computation

Birkhäuser
Boston • Basel • Berlin

Contents

Preface	xi
1 Diagonally Stable Structures in Systems and Computation	1
1.1 Introduction	1
1.2 Robust Stability of a Mechanical System	5
1.3 The Lotka–Volterra Ecosystem Model	8
1.4 Convergence of Asynchronous Computations	11
1.5 Global Stability of Neural Networks	15
1.6 Variable Structure Systems	17
1.7 Existence of Diagonal-Type Liapunov Functions	21
1.8 Notes and References	23
2 Matrix Diagonal and D-Stability	25
2.1 Matrix Stability Concepts	25
2.1.1 Basic Notation and Terminology	28
2.1.2 Basic Results on Hurwitz Diagonal and D-Stability	31
2.2 Special Classes of Hurwitz Diagonally Stable Matrices . .	40
2.3 Similarity for Hurwitz Diagonally Stable Matrices	46
2.4 Persistence of Diagonal Stability under Perturbations . .	48
2.5 Basic Results on Schur Diagonal and D-Stability	50
2.6 A Matrix Polytopic View of Schur Diagonal and D-Stability	54
2.7 Special Classes of Schur Diagonally Stable Matrices . . .	58

2.7.1	Schur Diagonal and D-Stability for Two-by-Two Matrices	63
2.7.2	Nonnegative Matrices	65
2.7.3	Qualitatively Schur Stable Matrices	72
2.8	Testing for Diagonal and D-Stability	75
2.9	Notes and References	83
2.10	Appendix: Summary of the Theory of the Liapunov Equation	85
3	Mathematical Models Admitting Diagonal-Type Liapunov Functions	90
3.1	Classes of Nonlinearities and Diagonal-Type Liapunov Functions	90
3.2	Continuous-Time State-Space Models and Stability Results	92
3.3	Seeking Hurwitz Diagonal Stability: State-Space Realization Procedures	98
3.4	Discrete-Time State-Space Models and Stability Results	101
3.4.1	Discrete-Time Interval Systems	108
3.5	Models for Asynchronous Systems	115
3.6	Discrete-Time Systems with Delays	119
3.7	Notes and References	122
3.8	Appendix: Summary of Liapunov Stability Theory	123
4	Convergence of Asynchronous Iterative Methods	128
4.1	What Are Asynchronous Iterative Methods?	128
4.2	A Mathematical Model for Asynchronous Block-Iterations	130
4.2.1	Convergence Conditions for the Asynchronous Case	133
4.2.2	Convergence Conditions for the Synchronous Case	136
4.3	Asynchronous Iterations to Solve Almost Linear Equations	138
4.4	Parallel Asynchronous Team Algorithms	144
4.5	Notes and References	152
5	Neural Networks, Circuits, and Systems	154
5.1	Continuous-Time Hopfield-Tank Neural Networks	154
5.1.1	A Global Stability Result	156
5.1.2	Refinements of the Global Stability Result	158
5.1.3	Persistence of Global Asymptotic Stability	164
5.2	Discrete-Time Neural Networks	166
5.3	Passive RLC Circuits	170
5.4	Digital Filters in State-Space Description	174
5.5	Two-Dimensional (2D) Dynamical Systems	177
5.6	Trophic Chains and Communities with Vertical Structure	184
5.7	Notes and References	190

6	Interconnected Systems: Stability and Stabilization	192
6.1	Diagonal Stability in the Large Scale Systems Approach	192
6.2	Absolute Stability of Interconnected Systems	199
6.3	Linearly Interconnected Lur'e Systems	203
6.4	Stabilization by Linear Feedback	210
6.5	Decentralized Power-Frequency Control of Power Systems	219
6.6	Notes and References	226
6.7	Appendix: Summary of the Large Scale Systems Approach	227
	Epilogue	231
	References	232
	Index	257
