

MATRIX-GEOMETRIC SOLUTIONS IN STOCHASTIC MODELS

An Algorithmic Approach

MARCEL F. NEUTS

**DOVER PUBLICATIONS, INC.
NEW YORK**

Contents

Preface	ix
Chapter 1. Matrix-Geometric Invariant Vectors	1
1.1. Introduction	1
1.2. The Main Theorem	7
1.3. The Case Where the Matrix A Is Irreducible	14
1.4. A Case Where the Matrix A Is Reducible	23
1.5. Complex Boundary Behavior	24
1.6. The Approach Using Complex Analysis	27
1.7. Continuous-Parameter Markov Processes	30
1.8. Marginal and Conditional Probabilities, Moments	35
1.9. Computational Procedures	36
Chapter 2. Probability Distributions of Phase Type	41
2.1. Introduction	41
2.2. Definitions and Closure Properties	44
2.3. Asymptotic Behavior of PH-Distributions	62
2.4. PH-Renewal Processes	63
2.5. Two Applications of PH-Distributions	70
2.6. Concluding Remarks	77
Chapter 3. Quasi-Birth-and-Death Processes	81
3.1. Introduction	81
3.2. The Bounded and Unbounded $M/PH/1$ and $PH/M/c$ Queues	83
3.3. The Busy Period Structure	95

3.4. The Computation of the Matrix $G(x)$	112
3.5. The Embedded Markov Chain at Left Transitions	114
3.6. The Busy Period of the $PH/G/1$ Queue	120
3.7. The $PH/PH/1$ Queue as a QBD Process	125
3.8. The Simplicity of Erlang Arrivals	129
3.9. Waiting Time Distributions in the QBD Process	132
Chapter 4. The $GI/PH/1$ Queue and Related Models	142
4.1. The $GI/PH/1$ Queue	142
4.2. Generalizations and Variants of the $GI/PH/1$ Queue	159
4.2a. The $SM/PH/1$ Queue	159
4.2b. Examples of Queues With Semi-Markovian Arrivals	167
4.2c. Group Arrivals and Group Services	183
4.3. A Design Problem for the $D/PH/1$ Queue	197
4.4. Some Models for Dams	200
4.5. The Multi-Server $GI/PH/c$ Queue	206
Chapter 5. Buffer Models	215
5.1. Introduction	215
5.2. Servers in Series with a Finite Intermediate Buffer	217
5.3. A. B. Clarke's Tandem Queue	232
5.4. A Multiprogramming Model	245
Chapter 6. Queues in a Random Environment	254
6.1. The Random Environment	254
6.2. The $M/M/1$ Queue and Related Models in a Markovian Environment	257
6.3. A Queue With Server Breakdowns and Repairs	274
6.4. Overflow Models	286
6.5. Two Models in Which the Matrix A Is Triangular	292
6.6. A Finite-Source Priority Queue	298
6.7. Queues with Paired Customers	300
References	310
Index	329
