## 1 Statistical Thermodynamics of Amphiphile Self-Assembly: Structure and Phase Transitions in Micellar Solutions

*Avinoam Ben-Shaul and William M. Gelbart*

1

|       |  |    |
|-------|--|----|
| 1.1   | Introduction . . . . .   | 1  |
| 1.2   | Amphiphile Self-Assembly in Dilute Solutions . . . . .                               | 15 |
| 1.2.1 | Underlying Statistical Thermodynamics . . . . .                                      | 16 |
| 1.2.2 | The Equilibrium Size Distribution . . . . .  | 19 |
| 1.2.3 | From Monomers to Aggregates—the CMC . . . . .  | 21 |
| 1.2.4 | Micellar Growth . . . . .  | 23 |
| 1.2.5 | Other Aggregates . . . . .   | 31 |
| 1.2.6 | The Aggregate's Partition Function: Rotation-<br>Translation Contributions . . . . . | 34 |
| 1.3   | Molecular Organization of Aggregates . . . . .                                       | 40 |
| 1.3.1 | Separation of Head and Tail Contributions . . . . .                                  | 41 |
| 1.3.2 | Hydrocarbon Droplet Models . . . . .   | 44 |
| 1.3.3 | Chain Packing Statistics . . . . .   | 48 |
| 1.3.4 | Elastic Properties . . . . .   | 62 |
| 1.4   | Interaction Effects in Dilute Solution and Beyond . . . . .                          | 68 |
| 1.4.1 | Isotropic Solution Effects . . . . .   | 69 |
| 1.4.2 | Isotropic-to-Nematic Transition . . . . .  | 72 |
| 1.4.3 | Nematic-to-Hexagonal Transition . . . . .  | 79 |
| 1.4.4 | Interaction-induced Suppression of Curvature<br>in Lamellar Phases . . . . .         | 83 |
| 1.5   | Concluding Discussion . . . . .  | 90 |

## 2 Micellar Growth, Flexibility and Polymorphism in Dilute Solutions

*Gregoire Porte*

105

|       |   |     |
|-------|---|-----|
| 2.1   | Introduction . . . . .                                | 105 |
| 2.2   | Globule to Rod Transformation . . . . .               | 106 |
| 2.2.1 | Scattering Probes and Concentration Effects . . . . . | 106 |
| 2.2.2 | Local Structure . . . . .                             | 113 |
| 2.2.3 | Thermodynamics of the Growth . . . . .                | 116 |
| 2.3   | Polymerlike Behavior . . . . .                        | 122 |
| 2.3.1 | Flexibility . . . . .                                 | 122 |
| 2.3.2 | The Semi Dilute Regime . . . . .                      | 126 |

|          |  |            |
|----------|--|------------|
| 2.4      | Bidimensional Aggregation . . . . .  | 133        |
| 2.4.1    | The Swollen Lamellar Phase ( $L_\alpha$ ) . . . . .  | 134        |
| 2.4.2    | The Anomalous Isotropic Phase ( $L_3$ ) . . . . .  | 135        |
| 2.5      | The Physical Basis of Micellar Polymorphism . . . . .  | 138        |
| 2.6      | Connection with Microemulsions . . . . .   | 143        |
| <b>3</b> | <b>Micellar Liquid Crystals</b>  |            |
|          | <i>Neville Boden</i>   | <b>153</b> |
| 3.1      | Introduction . . . . .   | 153        |
| 3.2      | Nomenclature . . . . .   | 157        |
| 3.3      | Preparation of Stable Nematic Phases . . . . .   | 160        |
| 3.4      | Factors Governing Size and Shape of Micelles<br>in Concentrated Solutions . . . . .                    | 171        |
| 3.5      | Experimental Characterization of Nematic Phases . . . . .  | 178        |
| 3.5.1    | Polarizing Optical Microscopy . . . . .  | 178        |
| 3.5.2    | NMR Spectroscopy . . . . .   | 183        |
| 3.5.3    | X-ray Diffraction . . . . .  | 190        |
| 3.6      | Phase Transitions in Micellar Solutions . . . . .  | 196        |
| 3.6.1    | I-to- $N_D^+$ Transition in the CsPFO/Water System . . . . .   | 196        |
| 3.6.2    | $N_D^+$ -to- $L_D$ Transition in the CsPFO/Water<br>System . . . . .                                   | 206        |
| 3.6.3    | $N_D^-$ -to- $N_B$ -to- $N_C^+$ Transitions in the Potassium<br>Laurate/Decanol Water System . . . . . | 209        |
| 3.6.4    | Nematic-to-Cholesteric Transitions Induced by<br>Chiral Solutes . . . . .                              | 210        |
