Contents

Preface		v
Chapter 1	General Introduction	1
	1.1 Some Historical and Other Considerations	1
	1.2 Reasons for Microencapsulation	3
	1.3 Pharmacological and Physicochemical Considerations	8
	1.4 General References	13
	References	14
Chapter 2	Core and Coating Properties	21
	2.1 Core Properties	21
	2.2 Coating Properties	23
	2.3 Desolvation and Gelation of the Coating	44
	2.4 Mechanical Properties of Films	45
	2.5 Permeability to Oxygen, Carbon Dioxide, and Water Vapor—Photostability	47
	2.6 Miscellaneous Other Properties Relating to Microcapsules and Similar Dosage Forms	49
	References	53
Chapter 3	Coacervation-Phase Separation Procedures Using Aqueous Vehicles	61
	3.1 Introduction	61
	3.2 Simple and Complex Coacervation	64
	3.3 Microencapsulation of Drugs by Simple Gelatin Coacervation	70
	3.4 Microencapsulation of Drugs by Complex Gelatin—Acacia Coacervation	71

	3.5	Other Aspects of Microencapsulation by Simple or Complex Coacervation Involving Gelatin and Acacia	75
	3.6	Other Wall-Forming Polymers	82
	3.7	Solvent Evaporation Process	85
	3.8	Gelatin Nanoparticles	86
		References	89
Chapter 4		Coacervation-Phase Separation Procedures Using Nonaqueous Vehicles	97
	4.1	Ethylcellulose	97
	4.2	Cellulose Acetate Phthalate	107
	4.3	Cellulose Acetate Butyrate	108
	4.4	Hydroxypropylmethylcellulose Phthalate	108
	4.5	Carboxymethylethylcellulose and Polylactic Acid	109
	4.6	Cellulose Nitrate and Polystyrene	109
	4.7	Acrylate	110
	4.8	Poly(Ethylene-Vinyl Acetate) and Chlorinated Rubber	110
	4.9	Hardened Oils and Fats	111
	4.10	Miscellaneous Polymers	112
		References	114
Chapter 5		Interfacial Polycondensation	119
	5.1	Polyamide	121
	5.2	Polyester	137
	5.3	Polyurethane	138
	5.4	Miscellaneous	139
		References	139
Chapter 6		Pan Coating	145
	6.1	Introduction	145
	6.2	The Process	146
	6.3	Side-Vented Coating Pan Process	153
	6.4	Some Further Examples of the Microencapsulation of Drugs by Pan Coating	154
		References	159
Chapter 7		Air Suspension Coating	161
	7.1	Introduction	161
	7.2	Some Process Considerations	164
	7.3	Mathematical Determination of Parameters Associated with Air Suspension Coating	168
	7.4	Air Suspension Equipment and Its Operation	172
	7.5	Some Applications of Air Suspension Coating	173
		References	177

Chapter 8	Spray Drying, Spray Congealing, Spray Embedding, and Spray Polycondensation	181
8.1	Some Basic Principles of Spray Drying and Spray Congealing	181
8.2	Some Examples of the Microencapsulation of Excipients and Drugs by Spray Drying	184
8.3	Some Examples of the Microencapsulation of Excipients and Drugs by Spray Congealing	185
8.4	Spraying into Chilled Organic Solvent, Dehydrating Liquid, or Sorptive Solid Particles	187
8.5	Spray Embedding	188
8.6	Spray Polycondensation	191
	References	191
Chapter 9	Polymerization Procedures for Nonbiodegradable Micro- and Nanocapsules and Particles	195
9.1	Introduction	195
9.2	Acrylic Products	199
9.3	Polystyrene Products	213
9.4	Polysiloxane Products	214
	References	215
Chapter 10	Polymerization Procedures for Biodegradable Micro- and Nanocapsules and Particles	219
10.1	Polymers and Copolymers of Lactic/Glycolic Acids—Other Aliphatic Polyesters	219
10.2	Albumin Products	225
10.3	Polyalkyl Cyanoacrylate Products	231
10.4	Epoxy Products	233
10.5	Miscellaneous Products	235
	References	236
Chapter 11	Ion-Exchange Resins	241
11.1	Introduction	241
11.2	Drug Release from Ion-Exchange Resins	245
11.3	Drug Release from Coated Ion-Exchange Resins	247
11.4	Miscellaneous	250
	References	250
Chapter 12	Congealable Disperse-Phase Encapsulation Procedures	253
12.1	Introduction	253
12.2	Extrusion Devices	253
12.3	Hydrophilic Congealable Systems	256

12.4	Hydrophobic Congealable Systems—Waxes, Fats, and Oils	261
	References	262
Chapter 13	Miscellaneous Other Methods of Encapsulation and Entrapment	265
13.1	Physical Methods	265
13.2	Dip Coating	272
13.3	In Situ Polymerization	272
13.4	Liposomes	273
13.5	Spherical Matrices from Liquid Suspension	278
13.6	Granulation Processes	278
13.7	Spheronization	279
13.8	Molecular-Scale Entrapment	281
13.9	Other Approaches and Considerations	284
	References	286
Chapter 14	Release of Drug from Microcapsules and Microparticles	289
14.1	Introduction	289
14.2	Permeation Considerations	289
14.3	Diffusion—Some Initial Mathematical and Other Considerations	293
14.4	Diffusion Coefficient	295
14.5	Partition Coefficient	299
14.6	Drug Solubility and Solubility Gradient	300
14.7	Coating Area and Thickness	302
14.8	Kinetics of Drug Release from Microcapsules and Microparticles	302
14.9	Microcapsules Conforming to Release from Reservoir-Type Devices	303
14.10	Lag Time and Burst Effects	307
14.11	Microcapsules and Microparticles Conforming to Release From Monolithic Devices	308
14.12	Pore Effects	312
14.13	Boundary-Layer Effects	312
14.14	Moving Boundaries	314
14.15	Summary	315
	References	316
Appendix		321
