

Microscopic Properties and Processes in Minerals

edited by

Kate Wright

Department of Earth Sciences,
University of Manchester,
Manchester, United Kingdom

and

Richard Catlow

Davy Faraday Laboratory,
The Royal Institution of Great Britain,
United Kingdom

Kluwer Academic Publishers

Dordrecht / Boston / London

Published in cooperation with NATO Scientific Affairs Division

CONTENTS

Preface

1. Crystal structures at extremes of pressure and temperature
R. Miletich and R.J. Angel 1
2. Equations of state
J.-P. Poirier 19
3. Introduction to Raman spectroscopy at extreme pressure and
temperature conditions
Ph. Gillet 43
4. Thermodynamic properties of minerals at high pressures and
temperatures from vibrational spectroscopic data
P.Gillet, J. Matas, F. Guyot and Y. Ricard 71
5. Introduction to the application of neutron spectroscopy in the
Earth Sciences
B. Winkler 93
6. Synchrotron radiation and solid state science
C.R.A. Catlow and G. Sankar 145
7. *In situ* structural and kinetic powder diffraction studies
of aluminosilicates
G. Artioli 177
8. Mineral synthesis by flux-growth methods
H. Skogby 189
9. Bonding and electronic structure of minerals
R. Cohen 201
10. Crystal chemistry of metal sulfide minerals
K. Wright and D.J. Vaughan 265
11. Introduction to the theory of lattice dynamics
M. Dove 281
12. Disorder and defects in solids
C.R.A. Catlow 299
13. The modelling of bulk diffusion in solids
L. Vočadlo and G.D. Price 323
14. Classical computer simulations
A.N. Cormack 337
15. *Ab initio* LCAO periodic simulations of crystal properties.
Phase transitions, magnetic and electronic behaviour,
X-ray diffraction
M. Catti 351
16. Atomic structure of disordered materials
M.T. Dove and D.A. Keen 371

17.	Principles of solid state NMR spectroscopy and applications to determining local order in minerals A. Putnis and V. Vinograd	389
18.	Introduction to the theory of displacive phase transitions M.T. Dove	427
19.	Order/disorder phenomena in minerals: ordering phase transitions and solid solutions M.T. Dove	451
20.	Phase transitions and Equations of State R. Miletich and R.J. Angel	477
21.	IR spectroscopy and hydrogen bonding in minerals A. Beran and E. Libowitzky	493
22.	Water in nominally anhydrous minerals H. Skogby	509
23.	Contribution of IR spectroscopy to the problem of water in the Earth's mantle A. Beran	523
24.	Solubility and diffusion of 'water' in silicate minerals D. Kohlstedt and S.J. Mackwell	539
25.	The theory and simulation of the melting of minerals L. Vocablo and G.D. Price	561
26.	Molecular dynamics computer simulations of silicate glasses A.N. Cormack	577
27.	Mineral surface science: principles, applications and case studies A. Putnis, U. Becker and D. Bosbach	595
28.	Atomistic simulation of mineral surfaces and interfaces N.H. de Leeuw, D.J. Harris, P.J. Lawrence and S.C. Parker	629
