1 OPERATIONS RESEARCH IN DEFENSE 1

1.1 The Need for Operations Research in Defense 1
1.2 The Birth of OR 2
1.3 Military OR 5
1.4 Methodology of OR Analysis 6
1.5 Success of a Military OR Study 10

2 SEARCH, DETECTION AND DAMAGE ASSESSMENT 13

2.1 Target Acquisition, Engagement and Damage Assessment 13
2.2 Detection Theory 15
Sensors 15
Detection Models 16
Detection Models for Radar and Sonar 17
2.3 Search Models 19
Target Distribution, Lateral Range and Sweep Width 20
Random and Exhaustive Search 21
Optimal Search Strategy 24
Localization and Tracking 25
Identification and Recognition 28
2.4 Hit Probability 28
Distribution of Errors 29
Circular, Rectangular and Elliptic Targets 30
2.5 Damage Assessment 38
Point Targets 39
Area Targets 42
2.6 Salvo and Pattern Firing 47
2.7 Single Vs. Multiple Aiming Point 52
2.9 Shooting Tactics Based on Damage Information 53

3 SIMULATION OF MILITARY SYSTEMS 59

3.1 System, Model and Simulation 59

3.2	Monte Carlo Sampling Procedure	60
	Area Damaged by Bombs or Shells	61
3.3	Continuous System Simulation	65
3.4	Discrete System Simulation	66
	Hit Probability of a Gun against a Circular Target	68
	Survivability of a Tank	69
	Achievable Hit Probability from a Tank Gun	74
	An Air Defense Naval Engagement	77
3.5	Weapon System Simulation Vs. Combat Simulation	81
3.6	Simulation Packages	83
4	**WAR GAMES**	**91**
4.1	Combat Simulations, War Games and Theory of Games	91
4.2	History of War Games	92
4.3	Classification of War Games	93
4.4	Development of War Games	96
4.5	Land War Games	102
4.6	Naval War Games	105
4.7	Air War Games	106
4.8	Other War Games	107
5	**COST EFFECTIVENESS ANALYSIS**	**111**
5.1	Effectiveness and System Cost	111
5.2	Cost Effectiveness Using Fixed Effectiveness Approach	112
5.3	Cost Effectiveness Using Figure of Merit	116
	Cost Effectiveness of Air Defense Guns and Surface-to-Air Missiles	117
	Cost Effectiveness of Air-to-Surface Missiles and Bombs	121
5.4	Fallacies of Cost Effectiveness Analysis	124
5.5	Cost and Operational Effectiveness Analysis (COEA)	125
6	**OPTIMIZATION PROBLEMS**	**129**
6.1	Resource Allocation Problems	129
6.2	Linear Programming	130
	The Weapon Mix Problem	132
	Weapon Deployment Problem	134
	Weapon Target Allocation Problem	137
	Sortie Allocation Problem	137
	Airlift Problem	139
6.3	The Transportation Problem	142
6.4	The Assignment Problem	144
6.5	Integer Programming	145
	Gomory Cutting Plane Method	146
	Branch and Bound Method	148

6.6 Multiobjective Programming 151
6.7 Dynamic Programming 152
6.8 Nonlinear Programming 158
6.9 Applications of Optimization Techniques in Gulf War 165

7 HEURISTIC OPTIMIZATION 169

7.1 Heuristic Optimization Algorithms 169
7.2 Weapon Target Allocation Problem in Multiple Layer Defense 169
7.3 Simulated Annealing 172
7.4 Genetic Algorithm 179
7.5 Artificial Neural Networks 184
Cohen-Grossberg Theorem 186
The Continuous Hopfield Neural Network Model 187
Optimization Using Neural Networks 188
7.6 Salient Features of the Three Heuristic Optimization Techniques 205

8 THE ANALYTIC HIERARCHY PROCESS 209

8.1 Multicriteria Decision Making 209
8.2 Delphi Method 209
8.3 Decision Matrix Approach 210
8.4 Forced Decision Matrix Approach 211
8.5 Analytic Hierarchy Process 213
Prioritization of Airborne Surveillance Systems 216
Evaluating Performance of Tanks 224
Project Selection 225
8.6 Problems and Modifications of AHP 227

9 HOMOGENEOUS COMBAT MODELS 233

9.1 Lanchester Equations of Warfare 233
9.2 Other Attrition Laws 238
9.3 Combat Termination Rules 243
9.4 Measure of Combat Success 246
9.5 Combat Modeling with Spatial Effects 260
9.6 Stochastic Duels 268
9.7 Stochastic Combat Models 270
9.8 Combat Models with Nonlinear Effects 276
9.9 Air and Naval Combat Models 277

10 HETEROGENEOUS COMBAT MODELS 283

10.1 The (m,n) model 283
Fire Allocation Policies 284
Solution of the (m,n) Model 284

10.2 Aggregation 287
10.3 Scaling Methods 290
10.4 An Alternative Approach to Aggregation 293
10.5 Variable Resolution Models 296
10.6 Optimization Models 298
Application of Optimization Models to Study Weapon Dominance 305
Application of Optimization Models to Study Weapon Introduction 306

11 THREAT ASSESSMENT : STATIC AND DYNAMIC ANALYSES 311

11.1 Threat Assessment 311
11.2 Static Analysis 312
Bean Count Method 313
Weapon Effectiveness Index (WEI)/Weapon Unit Value (WUV) 313
Potential Anti-Potential Method 315
Force Potential Using Operational Lethality Indices (OLIs) 317
Situationally Modified Force Strength (SMFS) Method 322
11.3 Dynamic Analysis 328
Quantified Judgment Method of Analysis (QJMA) 328
Situational Force Scoring (SFS) 333
Adaptive Dynamic Model 342
Arms Race Models 351

12 ANALYSIS OF STRATEGIC STABILITY ISSUES 355

12.1 Concept of Stability 355
12.2 Measure of Military Stability 357
12.3 Linear Defense Models of Stability 359
Stationary Linear Defense Model 360
Mobile Linear Defense Model 363
12.4 Stable Regional Force Ratio Model 365
Analytical Stability Model (ASAM) 366
Generalized Force Ratio Model (GEFRAM) 369
12.5 Methods for Enhancing Stability in the Region 371
