

Mineral and Thermal Groundwater Resources

Marius Albu

*Professor of Hydraulics and Mineral Resource Management
University of Bucharest
Romania*

David Banks

*Head of the Geological Survey
Section for Geochemistry
Trondheim
Norway*

and

Harriet Nash

*Principal Hydrogeologist
Wardell Armstrong
UK*

CHAPMAN & HALL

London · Weinheim · New York · Tokyo · Melbourne · Madras

Introduction	xiii
Part One	
Mineral and Thermal Groundwater Resources	
<i>Marius Albu, David Banks and Harriet Nash</i>	
1 History of mineral and thermal waters	3
1.1 Therapeutic waters	4
1.2 Mineral extraction from groundwaters	12
1.3 Bottling of mineral waters	14
1.4 Energy from thermal waters	19
2 Uses of mineral and thermal waters	21
2.1 Mineral waters	21
2.2 Therapeutic spas	23
2.3 Regulations governing mineral and bottled waters	33
2.4 Geothermal energy	39
3 Hydrogeochemistry and origin of mineral waters	48
3.1 Introduction	48
3.2 Chemical evolution of groundwater	49
3.3 Hydrochemical principles	56
3.4 Evolution of groundwater in a stratabound aquifer	70
3.5 Evolution of groundwater in crystalline rocks	76
3.6 Radioactive mineral waters	78
3.7 Categories of mineral waters	87

3.8	Isotope hydrochemistry, water origins and groundwater dating	92
4	Thermal water systems	101
4.1	Heat production and heat flow	101
4.2	Heat transport	104
4.3	Geothermal systems	105
4.4	Thermal water systems	107
4.5	Origins and chemistry of thermal waters	118
5	Investigation of mineral and thermal water systems	119
5.1	Stages of investigation	119
5.2	The resource base	121
5.3	Exploration	121
5.4	Estimation of the potential yield of mineral waters	134
5.5	Methods for estimating the quantity of heat stored in thermal water systems	141
6	Modelling of groundwater systems	145
6.1	Conceptual models	145
6.2	Constructing a model	146
6.3	Fundamental equations	149
6.4	Analytical modelling	151
6.5	Numerical modelling	151
6.6	Comparison of modelling methods	159
7	Exploitation and management of mineral and thermal waters	161
7.1	Abstraction of mineral waters	161
7.2	Abstraction of thermal waters	162
7.3	Drilling and borehole construction	163
7.4	Scaling and corrosion	165
7.5	Transport	169
7.6	Heat recoverability	169
7.7	Heat regeneration	174
7.8	Resource management	179
8	Environmental issues and conservation	190
8.1	Anthropogenic impacts	190
8.2	Concerns of mineral water exploitation	192
8.3	Protection of mineral water resources	192
8.4	Impacts of exploitation of thermal waters	194
8.5	Operational characterization of resource conservation	197

Part Two

Case Studies

9	Geothermal energy in Iceland	205
	<i>Hjalti Franzson, Jens Tómasson, Guðrún Sverrisdóttir and Freysteinn Sigurðsson</i>	
9.1	Geological outline	205
9.2	Geothermal activity, hydrogeology and chemistry	207
9.3	History of exploitation of geothermal resources	213
9.4	Case studies	214
	Acknowledgments	234
10	The spas of England	235
	<i>David Banks</i>	
10.1	Introduction	235
10.2	The spas of London and Surrey	237
10.3	The 'wyches' of Mercia and Cheshire	241
10.4	Other Mercian spas	243
10.5	Spas of the Carboniferous limestone of the White Peak	247
10.6	Harrogate spas	266
10.7	Bath	273
11	Geothermal and mineral water resources of Lithuania	281
	<i>Vytautas Juodkazis, Povilas Suveizdis and Vita Rasteniene</i>	
11.1	Geological context	281
11.2	Mineral waters of Lithuania	281
11.3	Geothermal energy	303
12	Natural mineral waters of Mineralnye Vody region of north Caucasus, CIS	317
	<i>John Ferry</i>	
12.1	Introduction	317
12.2	Geography	319
12.3	Geology	320
12.4	Hydrogeology	321
12.5	Narzan bottled water source	325
12.6	Resource management	327
12.7	Narzan water quality	328
13	Geological, hydrochemical, regulatory and economic aspects of natural packaged water production: Nordland County, Norway	331
	<i>Arve Misund and Patrice de Caritat</i>	
13.1	Introduction	331
13.2	Methodology	333

13.3	Geology and hydrogeology	334
13.4	Spring water, mineral water or packaged water?	347
13.5	Hydrogeochemistry	349
13.6	Logistical considerations	351
13.7	Export possibilities	353
13.8	Discussion and conclusions	355
	Acknowledgments	356
14	The mineral and thermal waters of the Krušné Hory rift valley, Czech Republic	357
	<i>Zbyněk Hrkal</i>	
14.1	Introduction	357
14.2	Karlovy Vary	361
14.3	Mariánské Lázně	366
14.4	Františkovy Lázně	371
14.5	Hájek–Soos	373
14.6	Jáchymov	374
15	The spa of Buziaș, Romania	376
	<i>Mircea U. Feru and Adrian Feru</i>	
15.1	Position and brief history	376
15.2	Geology and occurrence of groundwater	377
15.3	The mineral water resource	378
15.4	Exploitation of mineral waters	384
15.5	Utilization of mineral waters	386
15.6	Optimization of exploitation	386
15.7	Protection and conservation of sources	387
16	Optimization of exploitation of geothermal reservoirs in the Pannonian Basin, Romania	389
	<i>Horia Mitrofan and Viorel Șerbu</i>	
16.1	Introduction	389
16.2	Reservoir characteristics	390
16.3	Specific management approaches	392
16.4	Single well analysis	394
16.5	Well field analysis	400
16.6	Final Remarks	403
	Acknowledgments	405
	References	406
