# Preface

Orthopedic surgeons have already embraced minimally invasive procedures such as total and partial knee replacements, total hip replacements, and rotator cuff repairs. Inevitably, the technical challenge, the requests of patients and the imagination of surgeons has prompted more and more of us to perform surgery through small incisions in the foot and ankle. We already routinely perform arthroscopy of the ankle, subtalar, and first metatarsophalangeal joints, and many surgeons have become conversant with soft tissue endoscopy of the hindfoot and tendoscopy of the peroneal, the tibialis posterior, and the flexor hallucis longus tendons. These have the clear advantages of less morbidity and faster recovery than the equivalent open procedures, and there is enough scientific background to justify their use. Traditionally, the Achilles tendon lends itself to less invasive surgical approaches, and many surgeons have developed less invasive techniques to repair acute ruptures, reconstruct chronic ruptures, and deal with Achilles tendinopathy.

In the field of forefoot surgery, the concept of not having to perform extensive soft tissue dissection and perform extra-articular surgery is appealing. For example, in hallux valgus surgery there are several procedures which, using a subcapital osteotomy with marked lateral displacement of the capital fragment, avoid excision of the bunion, and therefore remain totally extraarticular. Theoretically, they should minimize post-operative stiffness. Sparing of soft tissue, less post-operative pain, less problems with wounds, better cosmesis, shorter operating times, shorter hospital stay are all benefits of minimally invasive procedures.

Minimally invasive techniques are not free of complications. The main problems are connected to poor knowledge of anatomy, and, in osteotomies, to less than optimal placement of the osteotomy. Less invasive techniques are not ‘better’ than traditional, open techniques: at best, they are equivalent in terms of patients’ satisfaction and objective outcome measures, with hopefully less soft tissue complications and better cosmesis.

With this in mind, we present in this book procedures by many of the pioneers in less invasive surgery of the foot and ankle. These techniques can be powerful, and should not be embraced without full knowledge of the open procedures, and without appropriate anatomical knowledge and supervised training. The list of techniques presented is by no means exhaustive, and in this vibrant field we expect that many more will be described soon. Above all, we report a new philosophy of less and minimally invasive surgery,

prompting the reader to understand that which procedure to use in a particular patient is very much a question of horses for courses, and of surgical skills and training.

# Contents

## Part I Generalities

- 1 Minimally Invasive Foot Surgery: A Paradigm Shift**..... 3  
Mariano de Prado
- 2 Computer-Assisted Surgery (CAS) in Foot and Ankle Surgery**..... 13  
Martinus Richter
- 3 Tendoscopy** ..... 35  
Maayke Nadine van Sterkenburg, Peter Albert Johannes de Leeuw,  
and Cornelis Nicolaas van Dijk

## Part II Hallux

- 4 Arthroscopy of the First Metatarsophalangeal Joint** ..... 57  
Tun Hing Lui
- 5 Minimally Invasive Management of Hallux Rigidus** ..... 75  
Mariano de Prado, Pedro-Luis Ripoll, and Pau Golanó
- 6 Percutaneous First Metatarso-Phalangeal Joint Fusion** ..... 89  
Thomas Bauer
- 7 The Reverdin-Isham Procedure for the Correction of Hallux valgus**..... 97  
Stephen A. Isham and Orlando E. Nunez
- 8 Arthroscopic Assisted Correction of Hallux valgus Deformity** ..... 109  
Tun Hing Lui
- 9 Minimally Invasive Hallux valgus Correction** ..... 123  
Francesco Oliva, Umile Giuseppe Longo, and Nicola Maffulli
- 10 Minimally Invasive Modified Wilson Osteotomy  
for the Treatment of Hallux valgus** ..... 133  
Sheldon Nadal

### Part III Lesser Toes

- 11 Percutaneous Surgery for Static Metatarsalgia** ..... 157  
Thomas Bauer
- 12 Percutaneous Treatment of Static Metatarsalgia with Distal Metatarsal Mini-Invasive Osteotomy** ..... 163  
J.Y. Coillard, Olivier Laffenetre, Christophe Cermolacce, Patrice Determe, Stéphane Guillo, Christophe de Lavigne, and P. Golano
- 13 Isham Hammertoe Procedures for the Correction of Lesser Digital Deformities**..... 171  
Stephen A. Isham and Orlando E. Nunez
- 14 Minimally Invasive Management of Dorsiflexion Contracture at the Metatarsophalangeal Joint and Plantarflexion Contracture at the Proximal Interphalangeal Joint of the Fifth Toe** ..... 185  
Mariano de Prado, Pedro-Luis Ripoll, Pau Golanó, Javier Vaquero, Filippo Spiezia, and Nicola Maffulli
- 15 Arthroscopic Assisted Correction of Lesser Toe Deformity**..... 191  
Tun Hing Lui
- 16 Percutaneous Fixation of Proximal Fifth Metatarsal Fractures**..... 199  
Aaron T. Scott and James A. Nunley

### Part IV Hindfoot

- 17 Minimally Invasive Realignment Surgery of the Charcot Foot**..... 215  
Bradley M. Lamm
- 18 Arthroscopic Triple Arthrodesis**..... 223  
Tun Hing Lui
- 19 Percutaneous Calcaneal Displacement Osteotomy** ..... 231  
Lawrence A. Di Domenico, Joseph M. Anain Jr., and Michael D. LaCivita
- 20 Tendoscopy of the Flexor Hallucis Longus Tendon** ..... 245  
Tun Hing Lui
- 21 Open Reduction and Internal Fixation of Calcaneal Fractures Through a Combined Medial and Lateral Approach Using a Small Incision Technique**..... 253  
Michael M. Romash
- 22 Endoscopic Plantar Fasciotomy**..... 277  
Amol Saxena
- 23 Arthroscopic Os Trigonum Excision** ..... 289  
Shuji Horibe and Keisuke Kita

<b>24 Endoscopic Calcaneoplasty</b> .....	299
Maayke Nadine van Sterkenburg, Peter Albert Johannes de Leeuw, and Cornelis Nicolaas van Dijk	
<b>Part V Ankle</b>	
<b>25 Postero-medial Approach in the Supine Position for Posterior Ankle Endoscopy</b> .....	317
Francesco Allegra, Filippo Spiezia, and Nicola Maffulli	
<b>26 Ankle Equinus and Endoscopic Gastrocnemius Recession</b> .....	323
Amol Saxena and Christopher Di Giovanni	
<b>27 Athroscopic Arthrodesis of the Ankle</b> .....	341
Paul Hamilton Cooke	
<b>28 Percutaneous Osteosynthesis of Distal Tibial Fractures Using Locking Plates</b> .....	357
Mario Ronga, Chezhiyan Shanmugam, Umile Giuseppe Longo, Francesco Oliva, and Nicola Maffulli	
<b>29 Percutaneous Supramalleolar Osteotomy Using the Ilizarov/ Taylor Spatial Frame</b> .....	363
S. Robert Rozbruch and Austin T. Fragomen	
<b>30 Minimally Invasive Management of Syndesmotic Injuries</b> .....	397
Stefan Buchmann, Umile Giuseppe Longo, and Andreas B. Imhoff	
<b>Part VI The Achilles Tendon</b>	
<b>31 Endoscopic Assisted Percutaneous Achilles Tendon Repair</b> .....	409
Mahmut Nedim Doral, Murat Bozkurt, Egemen Turhan, and Özgür Ahmet Atay	
<b>32 Percutaneous Repair of Acute Achilles Tendon Ruptures</b> .....	419
Nicola Maffulli, Francesco Oliva, and Mario Ronga	
<b>33 Minimally Invasive Semitendinosus Tendon Graft Augmentation for Reconstruction of Chronic Tears of the Achilles Tendon</b> .....	425
Nicola Maffulli, Umile Giuseppe Longo, Filippo Spiezia, and Vincenzo Denaro	
<b>34 Minimally Invasive Achilles Tendon Reconstruction Using the Peroneus Brevis Tendon Graft</b> .....	431
Nicola Maffulli, Filippo Spiezia, Umile Giuseppe Longo, and Vincenzo Denaro	

---

<b>35 Free Hamstrings Tendon Transfer and Interference Screw Fixation for Less Invasive Reconstruction of Chronic Avulsions of the Achilles Tendon</b> .....	439
Nicola Maffulli, Umile Giuseppe Longo, Filippo Spiezia, and Vincenzo Denaro	
<b>36 Percutaneous Longitudinal Tenotomies for Chronic Achilles Tendinopathy</b> .....	447
Jonathan S. Young, Murali Krishna Sayana, Vittorino Testa, Filippo Spiezia, Umile Giuseppe Longo, and Nicola Maffulli	
<b>37 Minimally Invasive Stripping for Chronic Achilles Tendinopathy</b> .....	455
Nicola Maffulli, Umile Giuseppe Longo, Chandrusekar Ramamurthy, and Vincenzo Denaro	
<b>Index</b> .....	461
