Contents

Preface	xiii
Acknowledgments	xv
1 Introduction	1
1.1 Faraday and Voigt geometries; longitudinal and transverse magneto-optical effects	1
1.2 The Faraday effect	2
1.3 The Cotton–Mouton or Voigt effect	4
1.4 The magneto-optical Kerr effect (MOKE)	5
1.5 The permittivity tensor and the sign convention	7
1.6 Other physical aspects	8
1.6.1 Time-reversal symmetry, and circular anisotropy in a rotating medium	8
1.6.2 Light-induced magneto-optical effects; the angular momentum of a light beam	9
1.6.3 Non-linear magneto-optical effects	9
1.6.4 Magneto-optical luminescence	10
1.6.5 Magneto-optical effects in the x-ray region	10
1.6.6 Dichroic photoemission	11
1.7 Magneto-optical materials	12
1.7.1 Dielectrics	12
1.7.2 Ferrimagnetic garnets	12
1.7.3 Metals and alloys	13
1.7.4 Semimagnetic semiconductors	13
1.7.5 Bilayers, multilayers, superlattices, and granular materials	13
1.8 Applied magneto-optics	13
1.8.1 Magneto-optical devices	13
1.8.2 Magneto-optical memory	14
1.8.3 Integrated magneto-optics	14

PART 1: Physics	17
2 Polarized light and gyrotropic media	19
2.1 Material equations and boundary conditions	19
2.2 The tensors $\hat{\epsilon}$ and $\hat{\mu}$, and the gyration vector \mathbf{g}	21
2.3 Normal modes and Fresnel equations	23
2.4 Polarization of light	24
2.5 Jones matrices; the spin and helicity of a photon	26
2.5.1 Spin and helicity of photons	29
2.6 The Stokes vector; the Poincaré sphere	30
3 Magneto-optical effects	33
3.1 The Faraday effect, and magnetic circular dichroism	33
3.1.1 Magnetic circular birefringence—the Faraday effect	33
3.1.2 Magnetic circular dichroism (MCD)	34
3.2 Magnetic linear birefringence and magnetic linear dichroism	36
3.2.1 Magnetic linear birefringence (the Cotton–Mouton or Voigt effect)	36
3.2.2 Magnetic linear dichroism (MLD)	37
3.3 The Faraday effect in the presence of natural birefringence; gyro-anisotropic media	38
3.4 The magneto-optical Kerr effect (MOKE)	40
3.4.1 The three types of Kerr effect	41
3.4.2 The polar effect; the case of normal incidence	41
3.4.3 The transverse effect	43
3.4.4 The Jones matrices for an interface	45
3.4.5 General MOKE formulae	46
3.5 Even magneto-optical reflection effects	47
3.6 Thin films and multilayers	49
3.6.1 The thickness dependence	50
3.6.2 Odd transverse effects in transmitted light	53
3.6.3 The Jones matrix of a multilayer	55
3.7 Non-linear magneto-optical effects	58
3.7.1 The non-linear Kerr effect	58
4 Light waveguiding in thin magnetic films	63
4.1 Normal modes, and waveguiding conditions	63
4.2 Gyrotropic waveguides	66
4.3 Dielectric waveguides with graded $\epsilon(z)$ profiles; the quantum mechanics analogy	68
4.4 The efficiency of mode conversion; modulated waveguides	72
5 Microscopical mechanisms of magneto-optical activity	75
5.1 The permittivity tensor	76
5.2 The main interactions	77
5.3 The simplest models; diamagnetic and paramagnetic mechanisms	81

5.4	Transitions between the groups of levels (terms, multiplets, etc)	84
5.5	S ions; the effective 'spin-orbit field'	86
5.6	Magnetic dipole transitions, and the gyromagnetic Faraday effect	89
5.7	The polarizability of f ions	89
5.8	The Faraday effect in rare-earth garnets	92
5.9	The nature of the gyrotropic properties of the ferrites and other oxide compounds	96
5.10	Gyrotropic properties of metals	98
5.11	Plasma resonance and the polar Kerr effect	101
5.12	<i>Ab initio</i> studies of magneto-optical spectra in 3d-metal-based materials	102
6	Magneto-optical effects in the x-ray region	109
6.1	Introduction	109
6.2	Near-edge magnetization-sensitive transitions	110
6.3	Magnetic x-ray dichroism	110
6.3.1	The two-beam transmission mode	111
6.3.2	Fluorescence detection	112
6.4	Theoretical background	113
6.4.1	The one-particle approach	113
6.4.2	The many-particle approach	114
6.5	Sum rules	115
6.6	Examples; MCXD and magnetic anisotropy	116
7	Domain structure	121
7.1	General notions	121
7.2	The structure of domain walls	124
7.3	Stripe domain structure	126
7.4	The interaction of light with an isolated domain wall	129
7.5	Observation of magnetic domains	130
7.5.1	Faraday effect observation of the domain structure	131
7.5.2	Optimization of the wavelength of the light source	132
7.6	Optical microscopy of domains	133
7.7	The magneto-optics of antiferromagnetic domains	136
	 PART 2: Magneto-optical Materials	 139
8	Dielectrics	141
8.1	Orthoferrites	141
8.1.1	Structure	141
8.1.2	Optical spectra	141
8.1.3	Faraday rotation	142
8.1.4	The complex polar Kerr effect	143
8.1.5	The nature of the magneto-optical activity of the orthoferrites	143

8.2	Manganites	144
8.3	Spinel ferrites	147
8.3.1	Co-containing ferrimagnetic spinels	147
8.3.2	Spinel ferrites	152
8.3.3	Amorphous $\text{NiFe}_2\text{-P}_2\text{O}_5$ and $\text{CoFe}_2\text{-P}_2\text{O}_5$ films	152
8.4	Hexagonal ferrites	153
8.4.1	Magnetoplumbite	153
8.4.2	Barium hexaferrite	153
8.5	Chalcogenide spinels	154
8.6	Chromium trihalides	156
8.6.1	Properties of CrCl_3 , CrBr_3 , and CrI_3	156
8.6.2	Optical absorption	157
8.6.3	Magneto-optical properties	157
8.7	Europium oxide and monochalcogenides	159
8.7.1	EuS and doped EuS films	159
8.7.2	EuO	160
8.8	Ferric borate and ferric fluoride	161
9	Ferrimagnetic garnets	163
9.1	Magnetic and structural properties	163
9.2	Yttrium iron garnets	164
9.2.1	Optical properties	164
9.2.2	Magneto-optical properties	171
9.3	Rare-earth iron garnets	173
9.3.1	Optical properties	173
9.3.2	Magneto-optical properties	175
9.3.3	Faraday rotation in the transparent band	176
9.3.4	The Faraday effect in a strong magnetic field	179
9.4	Fe^{2+} and Fe^{4+} ions in garnets	181
9.4.1	Optical properties	182
9.4.2	Magneto-optical properties	185
9.5	Cobalt-substituted iron garnets	186
9.5.1	Optical properties	186
9.5.2	Magneto-optical properties	187
9.6	Bismuth-substituted iron garnets	187
9.6.1	Optical properties	187
9.6.2	Magnetic properties	188
9.6.3	Magneto-optical properties	189
9.6.4	Concentration and temperature dependencies	193
9.6.5	The magneto-optical figure of merit	193
9.7	Lead-substituted iron garnets	194
9.7.1	Optical properties	194
9.7.2	Magneto-optical properties	195
9.8	Cerium-substituted iron garnets	196

9.8.1	Optical properties	196
9.8.2	Magneto-optical properties	197
10	Metals and alloys	201
10.1	Transition metals and alloys	201
10.1.1	Iron, cobalt, and nickel	201
10.1.2	Alloys of transition metals	202
10.1.3	Iron-based alloys and compounds	202
10.1.4	Cobalt-based alloys and compounds	205
10.1.5	Nickel-based alloys and compounds	207
10.1.6	Manganese compounds	208
10.1.7	Chromium compounds	211
10.2	Rare-earth–transition metal compounds	211
10.3	Pseudo-binary compounds	213
10.4	Intermetallic ternary compounds	213
10.4.1	Heusler alloys	214
10.4.2	PtMnSb, and Mn-based compounds	215
10.4.3	Cr ₂₃ C ₆ -type compounds	218
10.4.4	Miscellaneous ternary compounds	219
10.5	Cerium and thulium low-temperature compounds	220
10.5.1	Cerium-containing compounds	220
10.5.2	Thulium-containing compounds	221
10.6	Uranium-containing compounds	222
10.6.1	Uranium–transition metal materials	222
10.6.2	Uranium chalcogenides and pnictides	223
10.6.3	Amorphous films of U _x Sb _{1-x} and TbFeU	224
10.7	Amorphous alloys	225
10.7.1	Amorphous alloys based on 3d transition metals	226
10.7.2	Amorphous rare-earth–transition metal films	227
11	Semimagnetic semiconductors	231
11.1	Manganese-doped semiconductors	232
11.2	The Faraday effect induced by the free carrier	236
11.3	Magneto-optics of quantum objects	237
11.4	Light-induced magnetization	237
11.5	Applications of the Faraday effect in SMS	238
12	Bilayer, multilayer, superlattice, and granular structures	239
12.1	Bilayer structures	240
12.1.1	Rare-earth–transition metal bilayers	240
12.1.2	PtMnSb/TbFe bilayers	241
12.1.3	Magnetic/non-magnetic bilayers	241
12.1.4	Dielectric/magnetic film bilayers	244
12.2	Trilayer and quadrilayer structures	244

12.3	Compositionally modulated structures	246
12.3.1	Transition metal/transition metal multilayers	246
12.3.2	Rare-earth/transition metal multilayers	246
12.3.3	Transition metal/non-magnetic metal multilayers	247
12.3.4	Co/U-As multilayers	254
12.3.5	Magnetic/dielectric multilayers	255
12.3.6	Cd/Mn/Te superlattices	256
12.4	Composite magneto-optical materials	256
12.4.1	Transition metal/dielectric granular thin films	256
12.4.2	Macroscopic ferrimagnetics—EuS precipitates in a cobalt matrix	258
PART 3: Applied Magneto-optics		261
13	Thin-film magneto-optical devices	263
13.1	Magneto-optical modulators	263
13.2	Bistable optical switches	268
13.3	Non-reciprocal devices	269
13.4	Magneto-optical circulators	276
13.5	Magneto-optical deflectors	278
13.6	Spatial filtering of optical signals	285
13.7	Magneto-optical transparencies and displays	288
13.8	Magneto-optical read heads and creation of a magnetic image	298
13.9	Laser gyroscopes with magneto-optical elements	303
13.10	Magnetic field sensors	307
14	Magneto-optical memories, disks, and tapes	311
14.1	Memory addressed by a laser beam	311
14.2	Magneto-optical disks	314
14.2.1	The disk assembly	315
14.2.2	Thermomagnetic recording	318
14.2.3	Direct overwriting in magneto-optical recording	321
14.2.4	The signal-to-noise ratio	323
14.2.5	Magneto-optical recording materials	324
14.3	Magneto-optical tape	330
15	Integrated magneto-optics	333
15.1	Thin-film magneto-optical waveguides	334
15.2	Anisotropic magneto-optical waveguides	338
15.3	Induced optical anisotropy	339
15.4	Waveguides with high Faraday rotation	340
15.5	Quadratic magneto-optical effects	341
15.6	Sputtered epitaxial Bi-substituted iron garnet films	343

16 Integrated magneto-optical devices	345
16.1 Waveguide magneto-optical modulators	345
16.2 Waveguide non-reciprocal elements	348
16.3 Waveguide magnetic field sensors	356
16.4 Interactions of optical waveguide modes and magnetostatic waves	357
16.5 Materials for waveguide/MSW devices	360
References	363
