# Modules over Non-Noetherian Domains

**László Fuchs  
Luigi Salce**

**American Mathematical Society**

# Table of Contents

Preface .....	xi
List of Symbols .....	xv

## Chapter I. Commutative Domains and Their Modules

1. Generalities on domains .....	1
2. Fractional ideals .....	9
3. Integral dependence .....	16
4. Module categories .....	22
5. Lemmas on Hom and Ext .....	27
6. Lemmas on tensor and torsion products .....	32
7. Divisibility and relative divisibility .....	36
8. Pure submodules .....	42
9. The exchange property .....	49
10. Semilocal endomorphism rings .....	52
Notes .....	55

## Chapter II. Valuation Domains

1. Fundamental properties of valuation domains .....	57
2. Totally ordered abelian groups .....	60
3. Valuations .....	64
4. Ideals of valuation domains .....	68
5. The class semigroup .....	73
6. Maximal and almost maximal valuation domains .....	77
7. Henselian valuation rings .....	80
8. Strongly discrete valuation domains .....	86
Notes .....	89

## Chapter III. Prüfer Domains

1. Fundamental properties and characterizations .....	91
2. Prüfer domains of finite character .....	97
3. The class semigroup .....	100
4. Lattice-ordered abelian groups .....	107
5. Bézout domains .....	112
6. Elementary divisor domains .....	115
7. Strongly discrete Prüfer domains .....	119
Notes .....	121

**Chapter IV. More Non-Noetherian Domains**

1. Krull domains .....	123
2. Coherent domains .....	128
3. $h$ -Local domains .....	131
4. Matlis domains .....	137
5. Reflexive domains .....	142
Notes .....	147

**Chapter V. Finitely Generated Modules**

1. Cyclic modules .....	149
2. Finitely generated modules .....	152
3. Finitely presented modules .....	157
4. Finite presentations .....	161
5. Finitely generated modules over valuation domains .....	167
6. Indecomposable finitely generated modules .....	171
7. Finitely generated modules with local endomorphism rings .....	177
8. Decompositions of finitely generated modules .....	180
9. Finitely generated modules without the Krull-Schmidt property ...	185
10. Domains whose finitely generated modules are direct sums of cyclics	189
Notes .....	191

**Chapter VI. Projectivity and Projective Dimension**

1. Projective modules .....	195
2. Projective dimension .....	201
3. Projective dimension over valuation domains .....	206
4. Global projective dimension of Prüfer domains .....	212
5. Tight submodules .....	214
6. Modules of projective dimension one .....	216
7. Equivalent presentations .....	219
8. Stacked bases over $h$ -local Prüfer domains .....	224
9. Flat modules .....	229
10. Weak dimension .....	235
11. Quasi-projective modules .....	237
12. Pure- and $RD$ -projectivity .....	240
Notes .....	245

**Chapter VII. Divisible Modules**

1. Divisible modules .....	247
2. $h$ -Divisible modules, Matlis domains .....	251
3. Divisible modules over valuation domains .....	255
4. Categories of divisible modules .....	260
5. Indecomposable divisible modules .....	265
6. Superdecomposable divisible modules .....	269
Notes .....	272

**Chapter VIII. Topology and Filtration**

1. The $R$ -topology .....	273
2. Complete torsion-free modules. The Matlis category equivalence ..	278

3. Completions of ideals .....	282
4. $R$ -Completions over Matlis domains .....	285
5. Cokernels of $R$ -completions .....	290
6. Weakly cotorsion modules .....	292
7. Linear compactness .....	296
8. Filtration and ultracompleteness .....	300
Notes .....	302

### Chapter IX. Injective Modules

1. Injectivity .....	305
2. Indecomposable injectives .....	309
3. Absolute purity .....	312
4. Injectives over valuation and Prüfer domains .....	315
5. $\Sigma$ -Injectives .....	319
6. Injectives over Krull domains .....	324
7. Injective dimension .....	331
8. Quasi-injective modules .....	333
Notes .....	335

### Chapter X. Uniserial Modules

1. Generalities on uniserial modules .....	337
2. Endomorphism rings of uniserial modules .....	341
3. Uniserial modules over valuation domains .....	344
4. Existence of non-standard uniserial modules .....	348
5. More on the existence of non-standard uniserial modules .....	352
6. Kaplansky's problem .....	356
7. The threshold submodules .....	359
8. Life-span of uniserial modules .....	364
9. Uniserial modules of the same level .....	367
10. The monoid $\text{Unis } R$ .....	373
Notes .....	379

### Chapter XI. Heights, Invariants and Basic Submodules

1. Heights .....	381
2. Equiheight, nice and balanced submodules .....	384
3. Indicators .....	387
4. Invariants .....	389
5. Basic submodules .....	392
6. Modules with trivial invariants .....	396
Notes .....	402

### Chapter XII. Polyserial Modules

1. Polyserial and weakly polyserial modules .....	403
2. Direct sums of uniserial modules .....	407
3. Monoserial modules .....	410
4. Episerial modules and their submodules .....	414
5. Direct decompositions of weakly polyserial modules .....	419
Notes .....	421

**Chapter XIII.  $RD$ - and Pure-Injectivity**

1. $RD$ -Injective modules .....	423
2. Pure-injective modules .....	430
3. Algebraic compactness .....	434
4. Pure-injective modules over Prüfer domains .....	441
5. Pure-injective modules over valuation domains .....	444
6. Pure-injectivity over coherent domains .....	451
7. $\aleph_1$ -Compact modules .....	452
8. Cotorsion modules .....	457
Notes .....	461

**Chapter XIV. Torsion Modules**

1. Decompositions of torsion modules .....	463
2. Torsion modules of projective dimension one .....	465
3. Simple presentation .....	468
4. Balanced submodules .....	475
5. Simply presented torsion modules .....	479
6. Torsion-complete modules .....	483
Notes .....	487

**Chapter XV. Torsion-Free Modules of Finite Rank**

1. Preliminaries .....	489
2. Direct sums of ideals .....	493
3. Torsion-free modules over valuation domains .....	496
4. $D$ -Domains .....	500
5. Indecomposable modules .....	504
6. Indecomposability over valuation domains .....	509
7. Direct decompositions of torsion-free modules .....	513
8. Warfield domains .....	520
9. Intrinsic characterization of Warfield domains .....	526
Notes .....	529

**Chapter XVI. Infinite Rank Torsion-Free Modules**

1. Chains of projective modules .....	531
2. Almost projective modules .....	537
3. Balancedness .....	541
4. Balanced-projective dimension .....	547
5. Separable modules .....	551
6. Slender modules .....	553
7. Large indecomposable modules .....	559
8. Baer modules .....	562
9. Butler modules over valuation domains .....	570
10. Whitehead modules .....	576
Notes .....	582

Appendix on Set Theory .....	585
Bibliography .....	591
Author Index .....	603
Subject Index .....	607
