Contents

Preface xv

Notation and Abbreviations xxiii

1 Introduction 1
1.1 On Permutation Analysis 1
1.2 Conditionality and Exchangeability 3
1.3 The Permutation Testing Principle 6
1.4 Permutation Approaches 9
1.5 Randomization and Permutation 10
1.6 When Conditioning Is Appropriate 11
1.7 Computational Aspects 13
1.8 Basic Notation 15

2 Discussion of a Simple Testing Problem 17
2.1 A Problem with Paired Observations 17
2.1.1 Introduction 17
2.1.2 A Motivating Example 17
2.1.3 Modelling Responses 19
2.1.4 Symmetry Induced by Exchangeability 20
2.1.5 Further General Aspects 21
2.2 The Student t Paired Solution 22
2.2.1 Paired Normal Data 22
2.2.2 An Extension 23
2.3 The Signed Rank Test Solution 23
2.3.1 Paired Continuous Data 23
2.3.2 Generalized Scores 24
2.4 The McNemar Solution 24
2.4.1 Test on Signs of Differences 24
2.4.2 An Extension 26
2.5 The Permutation Solution 26
2.5.1 General Aspects 26

2.5.2 The Permutation Sample Space 27
2.6 The Conditional Monte Carlo Method 28
2.6.1 A Simulation Algorithm for Inspecting Permutation Sample Spaces 28
2.6.2 A Routine for Random Permutations 29
2.6.3 Approximating the Permutation Distribution 30
2.7 Permutation Confidence Interval for δ 31
2.7.1 Introductory Aspects 31
2.7.2 An Approximate Solution 32
2.7.3 A Conditional Monte Carlo Algorithm 33
2.8 Problems and Exercises 34

3 Theory of Permutation Tests for One-Sample Problems . . 37
3.1 Introduction 37
3.1.1 Basic Concepts 37
3.1.2 On Sufficient Statistics for Symmetric Data 41
3.2 Equivalence of Permutation Statistics 43
3.3 Formal Definition of Permutation Tests 44
3.3.1 Randomized Permutation Tests 44
3.3.2 Non-randomized Permutation Tests 46
3.4 Arguments Related to Permutation Tests 48
3.4.1 General Aspects 48
3.4.2 Arguments for Selecting a Test Statistic T 49
3.5 Examples of One-Sample Problems 52
3.6 Other Properties of Permutation Tests 55
3.6.1 Stochastic Ordering of p-values 55
3.6.2 Conditional and Unconditional Properties 57
3.6.3 Further Unconditional Properties 59
3.6.4 Some Consequences of the Theorems 60
3.6.5 Comments on Power Functions 63
3.6.6 An Algorithm for Evaluating the Conditional Power . . 64
3.6.7 Permutation Testing for Composite Hypotheses 66
3.7 Optimal Properties 67
3.7.1 Introductory Remarks 67
3.7.2 Further Remarks 68
3.8 Problems and Exercises 69

4 Examples of Univariate Multi-Sample Problems 73
4.1 Introduction 73
4.1.1 General Aspects 73
4.1.2 On Permutation Distributions 73
4.2 Inspection of the Permutation Sample Space 75
4.2.1 Conditional Monte Carlo Method 75
4.2.2 An Example 76

4.2.3 Rank Solutions 81
4.2.4 A Simple Routine for Random Permutations 81
4.2.5 Permutation Confidence Interval for δ 82
4.2.6 Problems and Exercises 83
4.3 Permutation One-Way ANOVA 84
4.3.1 An Example 84
4.3.2 Modelling Responses 85
4.3.3 Permutation Solutions 86
4.3.4 Problems and Exercises 88
4.4 Goodness-of-Fit for Ordered Categorical Variables 89
4.4.1 Introduction 89
4.4.2 Goodness-of-Fit Tests for Ordered Categorical Variables 90
4.4.3 A Solution Based on Score Transformations 91
4.4.4 Typical Goodness-of-Fit Solutions 92
4.4.5 Extension to Non-dominance Alternatives and C Groups 93
4.4.6 Problems and Exercises 95
4.5 A Problem with Repeated Observations 96
4.5.1 Introduction 96
4.5.2 Friedman's Rank Test 97
4.5.3 A Permutation Solution 98
4.5.4 An Example 99
4.5.5 Problems and Exercises 99

5 Theory of Permutation Tests for Multi-Sample Problems . 101
5.1 Introduction 101
5.1.1 Recalling Basic Notions 101
5.1.2 Recalling the Non-randomized Version 102
5.2 Examples of Multi-Sample Problems 102
5.3 Unbiasedness and Power of Some Multi-Sample Tests 111
5.3.1 Unbiasedness and Power for Two-Sample Location Problems 111
5.3.2 Some Corollaries 116
5.3.3 Unbiasedness of One-Way ANOVA 118
5.4 Some Asymptotic Properties 121
5.4.1 Introduction 121
5.4.2 Two Basic Theorems 121
5.5 Permutation Central Limit Theorems 123
5.5.1 Basic Notions 123
5.5.2 Permutation Central Limit Theorems 124
5.6 Problems and Exercises 127

6 Nonparametric Combination Methodology 133
6.1 Introduction 133
6.1.1 General Aspects 133

6.1.2 Bibliographic Notes . . . 135
6.1.3 Main Assumptions and Notation . . . 136
6.1.4 Some Comments . . . 139
6.2 The Nonparametric Combination Methodology . . . 140
6.2.1 Assumptions on Partial Tests . . . 140
6.2.2 Desirable Properties of Combining Functions . . . 141
6.2.3 A Two-Phase Algorithm for Nonparametric Combination 143
6.2.4 Some Useful Combining Functions . . . 147
6.2.5 Four Examples of Nonparametric Combination . . . 155
6.2.6 Problems and Exercises . . . 163
6.3 Consistency and Unbiasedness of Combined Tests . . . 165
6.3.1 Consistency . . . 165
6.3.2 Unbiasedness . . . 166
6.3.3 A Not Consistent Combining Function . . . 168
6.3.4 Problems and Exercises . . . 170
6.4 Some Further Asymptotic Properties . . . 172
6.4.1 General Conditions . . . 172
6.4.2 Further Asymptotic Properties . . . 173
6.5 Comments on Nonparametric Combination . . . 177
6.5.1 General Comments . . . 177
6.5.2 Final Remarks . . . 179

7 Examples of Nonparametric Combination . . . 181
7.1 Introduction . . . 181
7.2 Permutation Testing with Multivariate Paired Observations . . 182
7.2.1 Formal Description of Testing Problem . . . 182
7.2.2 An Example . . . 186
7.2.3 A Multivariate Extension of McNemar's Test . . . 188
7.2.4 Asymptotic Behaviour of Multivariate Tests with Paired Observations . . . 191
7.2.5 Problems and Exercises . . . 192
7.3 Permutation MANOVA with Mixed Data . . . 193
7.3.1 A Formal Description . . . 193
7.3.2 An Example with Four Categorical Variables . . . 196
7.3.3 A Two-Sample Multivariate Test . . . 198
7.3.4 A Multivariate Extension of Fisher's Exact Probability Test . . . 201
7.3.5 A Cross-over Design . . . 202
7.3.6 Problems and Exercises . . . 204
7.4 Goodness-of-Fit Tests for Ordered Categorical Variables . . . 206
7.4.1 Revisiting the Problem . . . 206
7.4.2 Some Extensions . . . 208
7.4.3 Two Examples . . . 210
7.4.4 Some Power Evaluations . . . 211

7.5 A Problem of Isotonic Inference 213
7.5.1 Introduction 213
7.5.2 Conditions for Nonparametric Combination 214
7.5.3 An Application from Genetics 216
7.5.4 An Example 217
7.5.5 A Multivariate Extension 217
7.6 A Problem with Multivariate Homoscedastic Repeated Responses 219
7.6.1 A Formal Description 219
7.6.2 An Algorithm for Conditional Simulation 222
7.6.3 An Example 222
7.6.4 Problems and Exercises 223
7.7 Power Behaviour and Remarks on Restricted Alternatives . . . 224
7.7.1 Power Behaviour of Combined Tests 224
7.7.2 Remarks on Restricted Alternatives 226
7.7.3 A Few Simulation Results 228

8 Permutation Analysis in Factorial Designs 229
8.1 Introduction 229
8.1.1 General Aspects 229
8.1.2 Solutions Based on Residuals 230
8.2 Exact Separate Tests for Replicated 2^2 Factorial Designs 232
8.2.1 Separate Sets of Hypotheses 232
8.2.2 Synchronized Permutations 233
8.3 Exact Tests for 2^2 Unbalanced Designs 237
8.3.1 Weighting Intermediate Statistics for Factor A 237
8.3.2 Weighting Intermediate Statistics for Factors B and AB 239
8.3.3 An Extension of Welch's Test for Heteroscedastic Models 239
8.4 Exact Tests in $I \times J$ Balanced Designs 241
8.4.1 Balanced Two-Way Layout 241
8.4.2 Separate Testing 241
8.4.3 Some Comments 243
8.4.4 Multivariate Extension of $I \times J$ Designs 243
8.4.5 Extension to a Kind of Unbalanced Heteroscedastic Model 244
8.5 Synchronized Tests in Replicated 2^k Factorials 246
8.5.1 Extension to 2^k Factorial Designs 246
8.5.2 Realignments 247
8.5.3 Construction of Test Statistics 250
8.6 General Characterization of Synchronized Tests 255
8.6.1 Characterizing Synchronized Permutations 255
8.6.2 Synchronized Permutation Tests for Fractional Designs of Different Resolution 256
8.7 A Comparative Simulation Study 259
8.7.1 Comparing Solutions in H_0 259
8.7.2 Power Results 261

8.8 An Application 262
8.9 Permutation Tests in Unreplicated Factorials 264
8.9.1 Introduction 264
8.9.2 Paired Permutation Tests 267
8.9.3 Paired Permutation Testing Algorithm 268
8.9.4 A Simulation Study 269
8.10 Problems and Exercises 271
8.11 Appendices 272
8.11.1 Sufficient Statistics for Replicated 2^2 Factorial Designs . 272
8.11.2 A Brief Review of Two-Level Factorial Designs 274

9 Permutation Testing with Missing Data 279
9.1 Introduction 279
9.1.1 General Aspects 279
9.1.2 Bibliographic Notes 280
9.2 On Missing Data Processes 281
9.2.1 Introduction 281
9.2.2 Data Missing Completely at Random 281
9.2.3 Data Missing Not at Random 282
9.3 The Permutation Approach 282
9.3.1 Introduction 282
9.3.2 Breaking Down the Hypotheses 284
9.4 The Structure of Testing Problems 285
9.4.1 Hypotheses for Non-MAR Models 285
9.4.2 Hypotheses for MCAR Models 286
9.4.3 Permutation Structure with Missing Values 287
9.5 Permutation Analysis of Missing Values 288
9.5.1 Partitioning the Permutation Sample Space 288
9.5.2 Solution for Two-Sample MCAR Problems 290
9.5.3 Extensions to Multivariate C-sample Problems 292
9.5.4 Extension to Non-MAR Models 293
9.5.5 Some Comments 293
9.6 An Example of a Non-MAR Model 295
9.6.1 Introduction 295
9.6.2 The Example 296
9.6.3 The Permutation Solution 297
9.7 An Example with Multivariate Paired Observations 299
9.7.1 The Problem 299
9.7.2 An Example with Fictitious Data 300
9.8 Power Behaviour of Some Tests with Missing Values 301
9.8.1 Introduction 301
9.8.2 Simulation Results and Comments 302
9.9 Problems and Exercises 303

10 The Behrens–Fisher Permutation Problem 305
10.1 Introduction 305
10.1.1 General Aspects 305
10.1.2 Bibliographic Notes 306
10.1.3 Formal Description of the Problem 307
10.2 Parametric Solutions 308
10.2.1 Basic Statistics 308
10.2.2 Known Covariance Matrices 309
10.2.3 Unknown Proportional Covariance Matrices 309
10.2.4 Unknown Covariance Matrices 309
10.3 A First Approximate Permutation Solution 310
10.3.1 Approximate Solution Based on Aspin and Welch Statistics 310
10.3.2 An Example 311
10.3.3 Extension of Approximate Solution to Multivariate Situations 312
10.4 An Almost Exact Permutation Solution 313
10.4.1 A Univariate Solution by Testing for Symmetry 313
10.4.2 Combining Two Tests of Symmetry 315
10.4.3 Asymptotic Behaviour 316
10.5 Extension to $C > 2$ Groups 317
10.6 Multivariate Permutation Solutions 318
10.6.1 Multivariate Solutions for Symmetric Distributions . . . 318
10.6.2 Three Multivariate Testing Problems 319
10.7 Distributional Behaviour 321
10.7.1 A Simulation Study in H_0 321
10.7.2 A Simulation Study in H_1 322
10.8 Permutation Testing for Location and Scale Coefficients 324
10.8.1 An Approximate Solution for Scale Coefficients 324
10.8.2 Joint Permutation Testing for Location and Scale Coefficients 325
10.9 Problems and Exercises 326

11 Permutation Testing for Repeated Measurements 329
11.1 Introduction 329
11.2 Modelling Repeated Measurements 330
11.2.1 A General Additive Model 330
11.2.2 The Hypotheses of Interest 332
11.3 Testing Solutions 333
11.3.1 Solutions by the Nonparametric Combination Approach 333
11.3.2 Analysis of Two-Sample Dominance Problems 335
11.3.3 An Example from the Literature 335
11.3.4 Some Power Evaluations 337
11.4 Testing for Repeated Measurements with Missing Data 338

11.4.1 Introduction 338
11.4.2 A Formal Description of the Problem 338
11.4.3 An Example 340
11.4.4 A Comparative Simulation Study 341
11.5 Tests for Balanced and Unbalanced Repeated Measures Designs 343
11.5.1 Repeated Measures on 2^2 Unbalanced Factorials 343
11.5.2 On $I \times J$ Balanced Designs 344
11.6 Problems and Exercises 345

12 Further Applications 347
12.1 Introduction 347
12.2 Morphological Differences in Biting Flies 348
12.2.1 Description of the Problem 348
12.2.2 Results of Analysis 349
12.3 A Clinical Trial on a Respiratory Drug 350
12.3.1 Description of the Problem 350
12.3.2 Results of Analysis 351
12.4 A Medical Experiment on Diabetic Patients 352
12.4.1 Description of the Problem 352
12.4.2 Results of Analysis 353
12.5 A Case Study of Recovery Wards 355
12.5.1 Description of the Problem 355
12.5.2 Results of Analysis 357
12.6 Analysis of Experimental Tumour Growth Curves 358
12.6.1 Description of the Problem 358
12.6.2 Results of Analysis 360
12.7 An Epidemiological Survey 361
12.7.1 Description of the Problem 361
12.7.2 Results of Analysis 363
12.8 Appendix: NPC Test 2.0 Software for Multivariate and Multistrata Permutation Analysis 365
