CLARENDON PRESS · OXFORD

1994

CONTENTS

1	INTRODUCTION	1
2	SHOCK WAVES ON EARTH AND IN SPACE	2
2.1	Introduction	2
2.2	Lightning–thunder phenomenon	3
2.3	Volcanic explosions	5
2.4	Meteor impact	7
2.5	Earthquakes	9
2.6	Solar flares	11
2.7	Magnetosphere flow	13
2.8	Galactic shock waves	14
	References	18
3	TRANSITION FRONTS	19
3.1	Basic gas dynamic equations for nonstationary one-dimensional flows	19
3.2	Solution by the method of characteristics	20
3.3	Rarefaction and compression waves	23
3.4	Shock waves and contact surfaces	37
	References	44
4	ONE-DIMENSIONAL FLOWS IN A SIMPLE SHOCK TUBE	46
4.1	Wave systems in a shock tube	46
4.2	Hot-gas regions, cold-gas regions	56
4.3	Reflection of shock and rarefaction waves	71
4.4	Refraction of shock and rarefaction waves at a contact surface	80
4.5	Collision of shock waves	88
4.6	Collision of rarefaction waves and shock waves	94
4.7	Open-end flows	97
	References	99
5	SHOCK TUBES WITH AREA CHANGES	100
5.1	Flows with positive chambrage	100
5.2	Flows with negative chambrage	107
5.3	Applications to hypervelocity launchers	110
	References	135

6	BOUNDARY-LAYER EFFECTS	137
6.1	Sidewall boundary layers induced by shock and rarefaction waves	137
6.2	Laminar, transitional, and turbulent boundary layers	139
6.3	Effects on wave motion, flow quantities, and flow uniformity	159
6.4	Effects on aerodynamic testing and chemical-kinetic studies	166
	References	175
7	TWO-DIMENSIONAL STUDIES OF OBLIQUE SHOCK-WAVE REFLECTION AND DIFFRACTION	178
7.1	Oblique shock-wave reflection	178
7.2	Oblique shock-wave diffraction over obstacles	222
7.3	Numerical simulations	250
	References	261
8	SPHERICAL AND CYLINDRICAL SHOCK-TUBE ANALOGUES AND FLOW SIMULATION	265
8.1	Spherical-flow simulation	265
	References	278
9	HYDRODYNAMIC SHOCK TUBES	279
9.1	Flows in a simple shock tube	279
9.2	Application to underwater spherical flows	287
	References	304
10	DUSTY-GAS SHOCK TUBES	306
10.1	Flow in a simple shock tube	306
10.2	Normal reflection of shock structure	320
10.3	Refraction of shock structure	330
10.4	Wedge flow	349
10.5	Corner expansion flow	366
10.6	Boundary-layer flow	379
	References	389
11	REAL-GAS EFFECTS ON SHOCK-TUBE FLOWS	392
11.1	Prandtl-Meyer flow of dissociated and ionized gases	392
11.2	Shock structure and stability in ionizing monoatomic gases	443
11.3	Ionizing argon boundary layers	460
	References	477
12	IMPLOSION WAVES AND APPLICATIONS	480
12.1	Generation of neutrons and gamma rays	480
12.2	Production of diamonds from graphite	484

CONTENTS

XI

12.3	Chemical-reaction and diffusion rates produced by implosions	487
12.4	Generation of strong planar shock waves	493
	References	497
13	SHOCK-TUBE CONSTRUCTION AND INSTRUMENTATION	499
13.1	Some examples of existing shock tubes at UTIAS	499
13.2	Useful instrumentation for shock tubes	517
	References	540
14	CLOSING COMMENTS	543
	INDEX	545
